Over 6 billion people to serve....

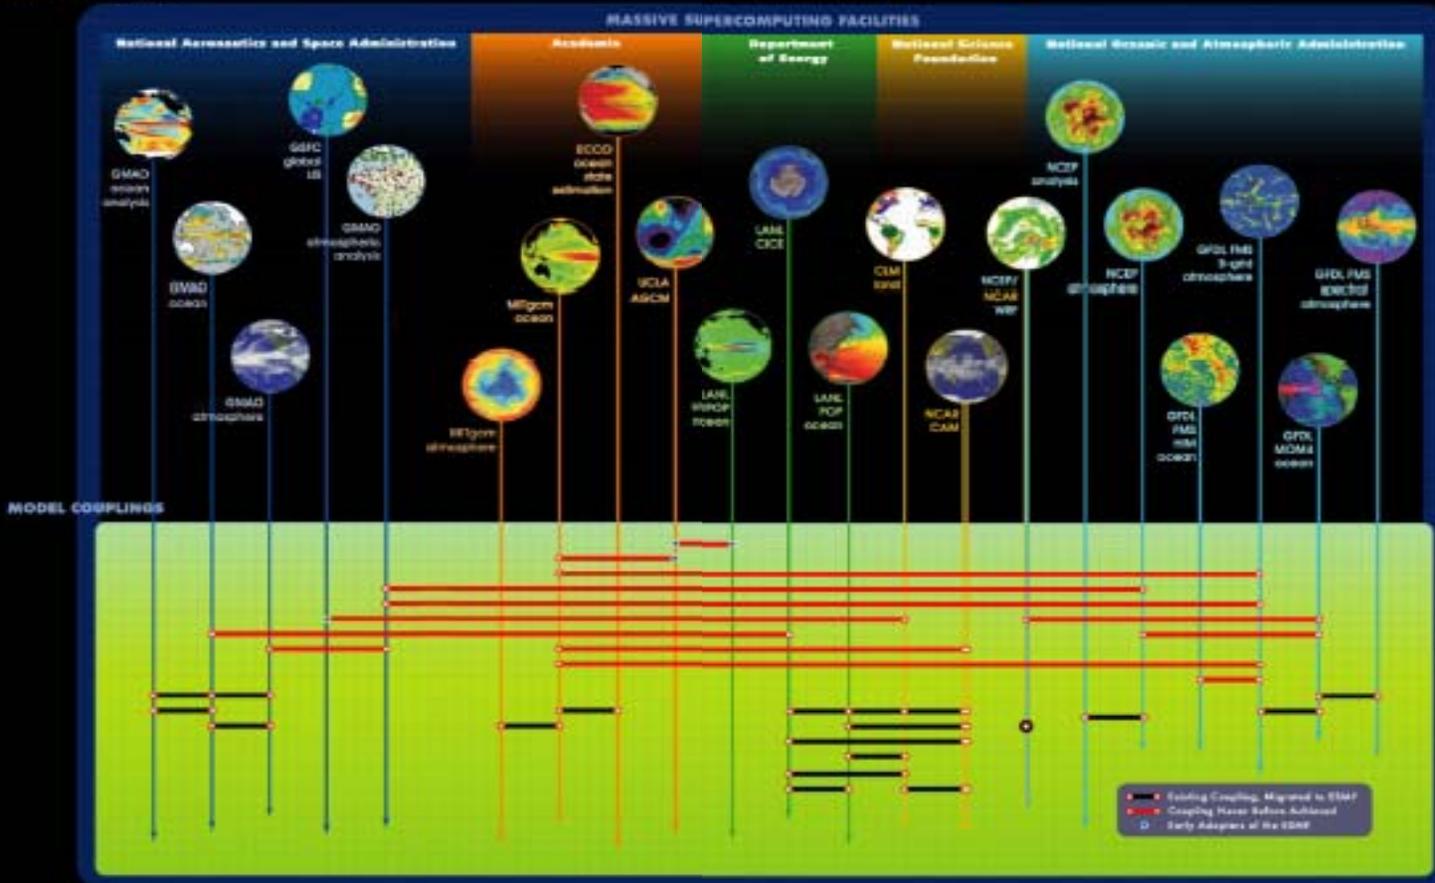

NASA Observing Spacecraft for Earth- Sun System Research

Earth System Models

ESMF EARTH SYSTEM MODELING FRAMEWORK

MODEL COMPONENTS

Observations to Knowledge Products

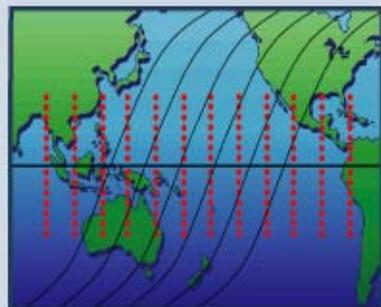

“from photons to electrons to neurons”

Downlink Speed

Petabytes 10^{15}

Multi-platform, multiparameter, high spatial and temporal resolution, remote & in-situ sensing

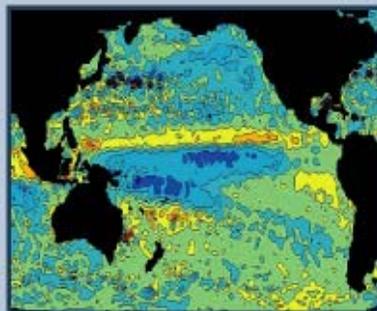

Advanced Sensors

Terabytes 10^{12}

Calibration, Transformation To Characterized Geo-physical Parameters

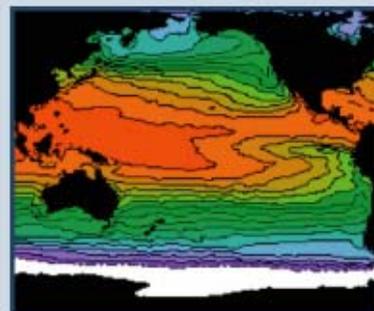

Data Processing & Analysis

Gigabytes 10^9

Interaction Between Modeling/Forecasting and Observation Systems

Information Synthesis

Megabytes 10^6

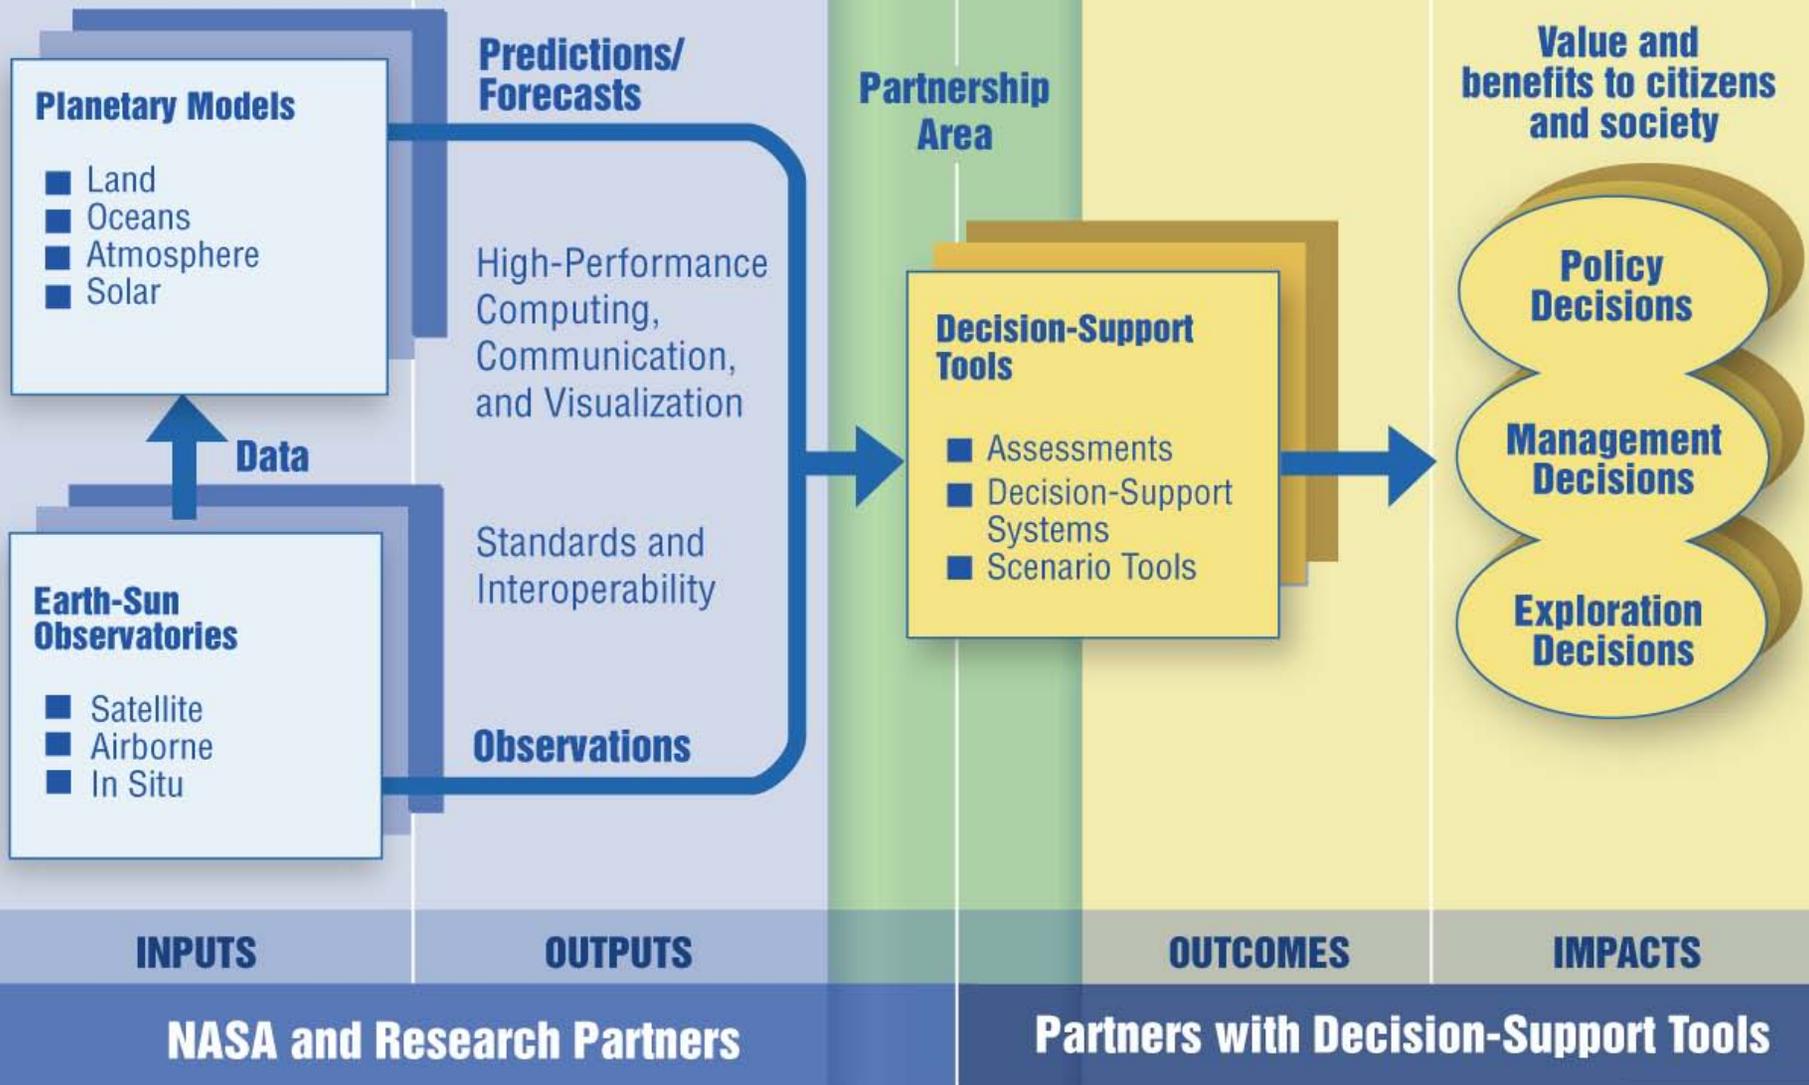

Interactive Dissemination and Predictions

Access to Knowledge

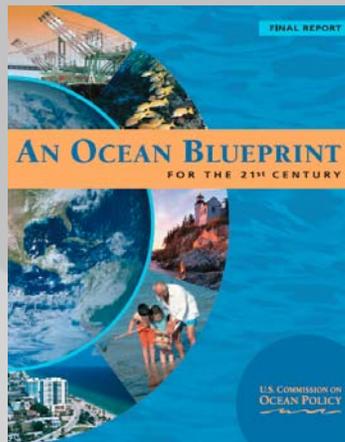

Integrating Knowledge, Capacity and Systems into Solutions

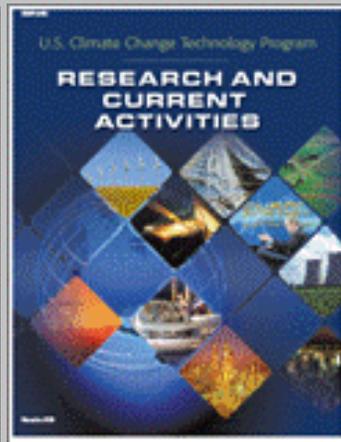

National Plans

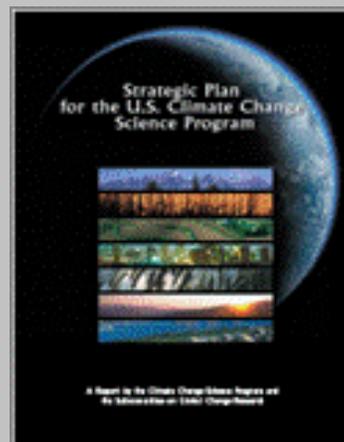

Commission on Ocean Policy

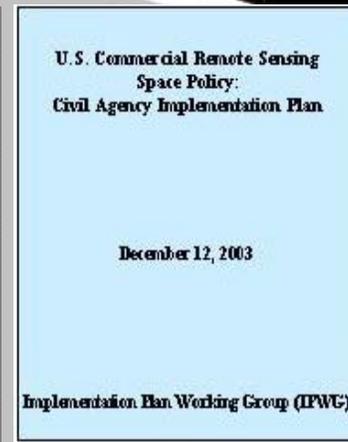

Integrated Earth Observation System

Climate Change Technology Program

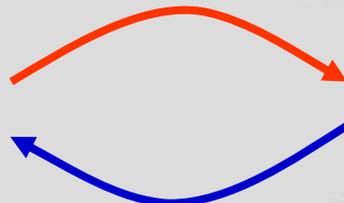

Climate Change Science Program

Commercial Remote Sensing Space Policy

Administration plans and policies form a basis for a **formal** NASA – NOAA Research & Operations Transition Plan

Capabilities

National and NASA Objectives

National Objective 5 – Study the Earth system from space and develop new space-based and related capabilities for this purpose.

NASA Objective 14

Advance scientific knowledge of the Earth system through space-based observation, assimilation of new observations, and development and deployment of enabling technologies, systems, and capabilities, **including those with potential to improve future operational systems.**

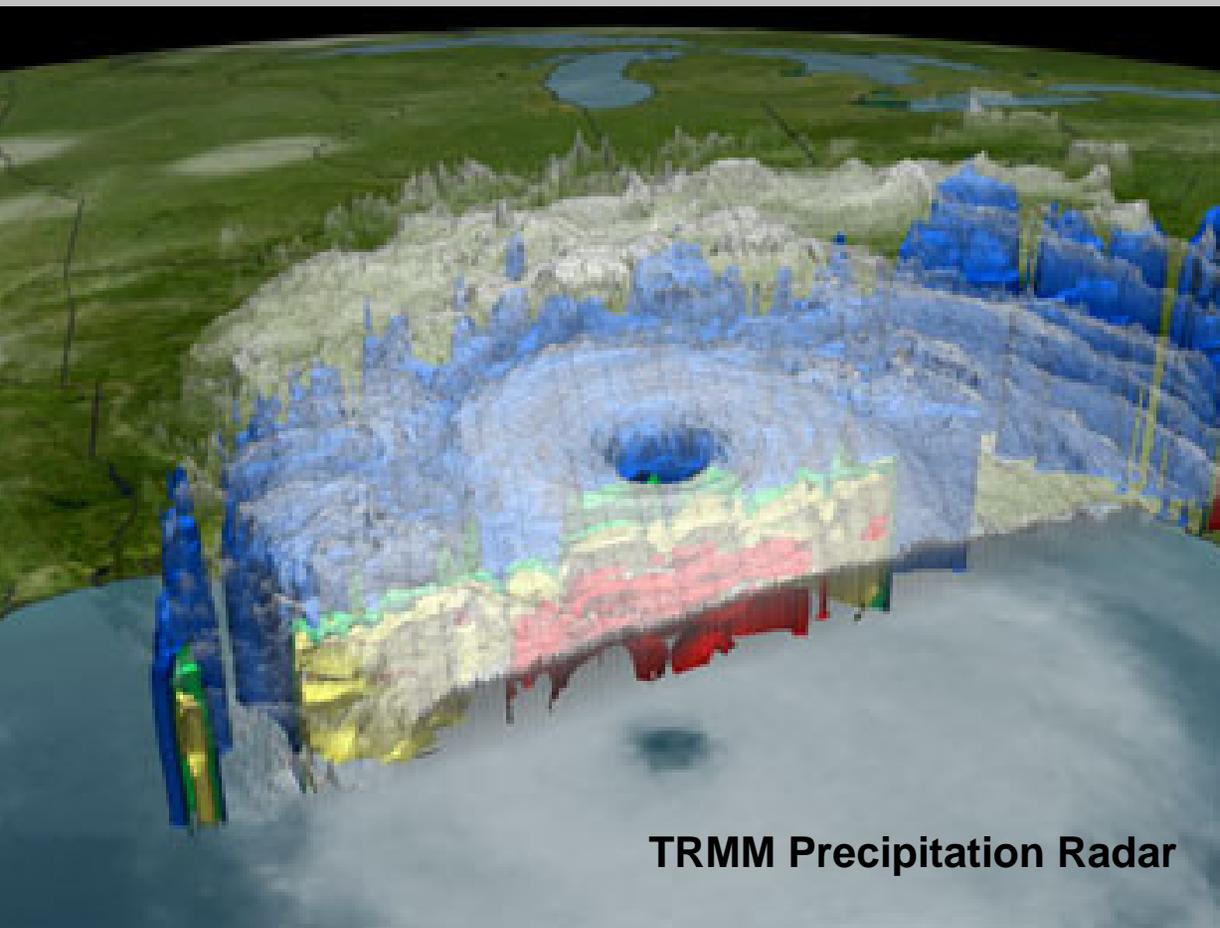

NASA Objective 15

Explore the Sun-Earth system to understand the Sun and its effects on Earth, the solar system, and the space environmental conditions that will be experienced by human explorers, **and demonstrate technologies that can improve future operational systems.**

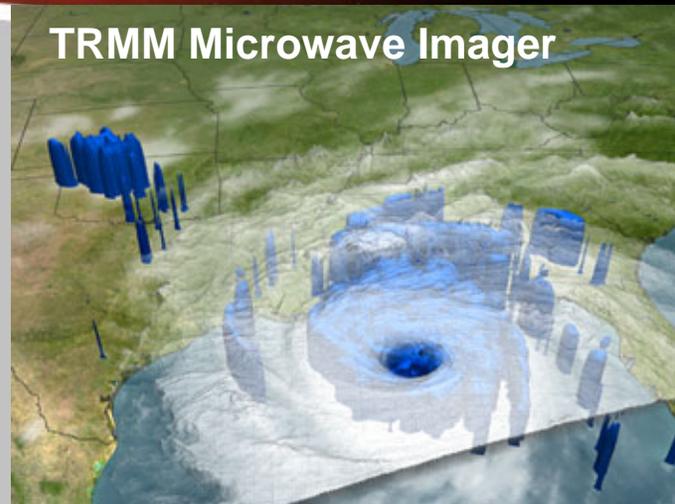

Observing Birth and Intensification of Deadly Cat-5 Hurricane Katrina

TRMM August 28, 10:25 pm

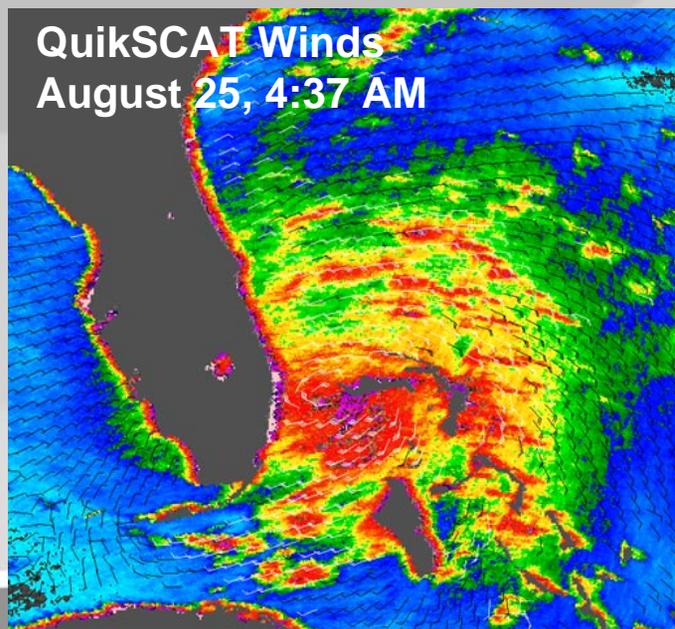

TRMM Precipitation Radar

TRMM Microwave Imager

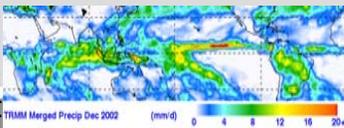

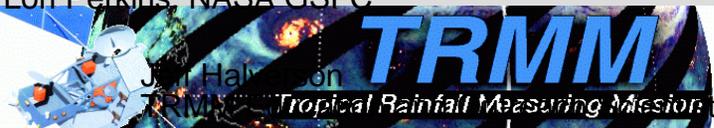

QuikSCAT Winds
August 25, 4:37 AM

QuikSCAT Science Team, JPL

Lori Perkins, NASA GSFC

The top of the slide features a NASA logo in the upper left corner, set against a background of a planet's horizon and a starry space scene. The main title is centered at the top in a large, bold, white font.

Joint Management Structure for NASA – NOAA R&O

■ Transition Management Oversight

- Establishes framework for collaboration, sets bilateral policy and priorities, approves Transition Plan, and oversees implementation
 - NOAA/J. Kelly
 - NASA/Mary Cleave

■ Ad hoc Joint Working Group

- Prepares overall Transition Plan, identifies Transition Capabilities, oversees development of individual implementation plans, and coordinates senior review of implementation plans
 - NOAA/Chet Koblinski
 - NASA/Ron Birk

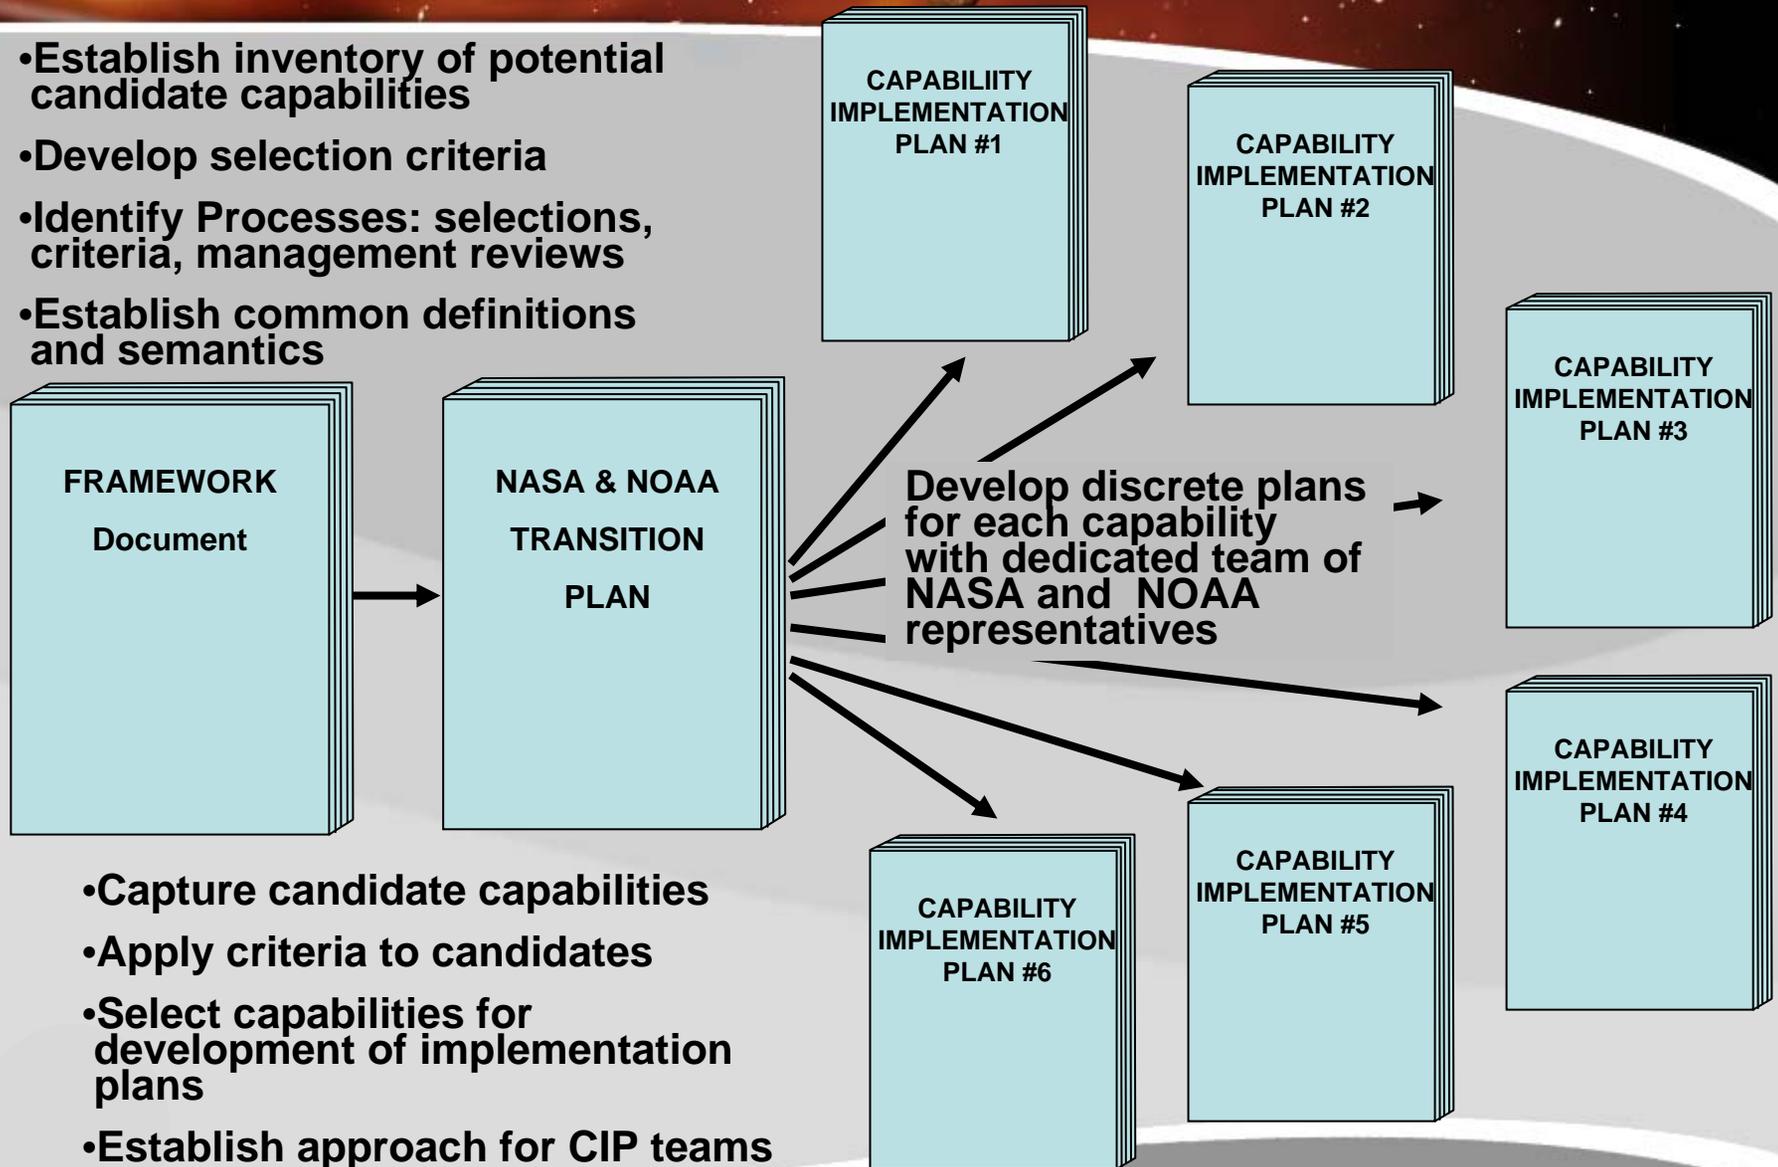

■ Transition Capability Teams

- Prepares an implementation plan for each identified Transition Capability

R&O JWG Documentation

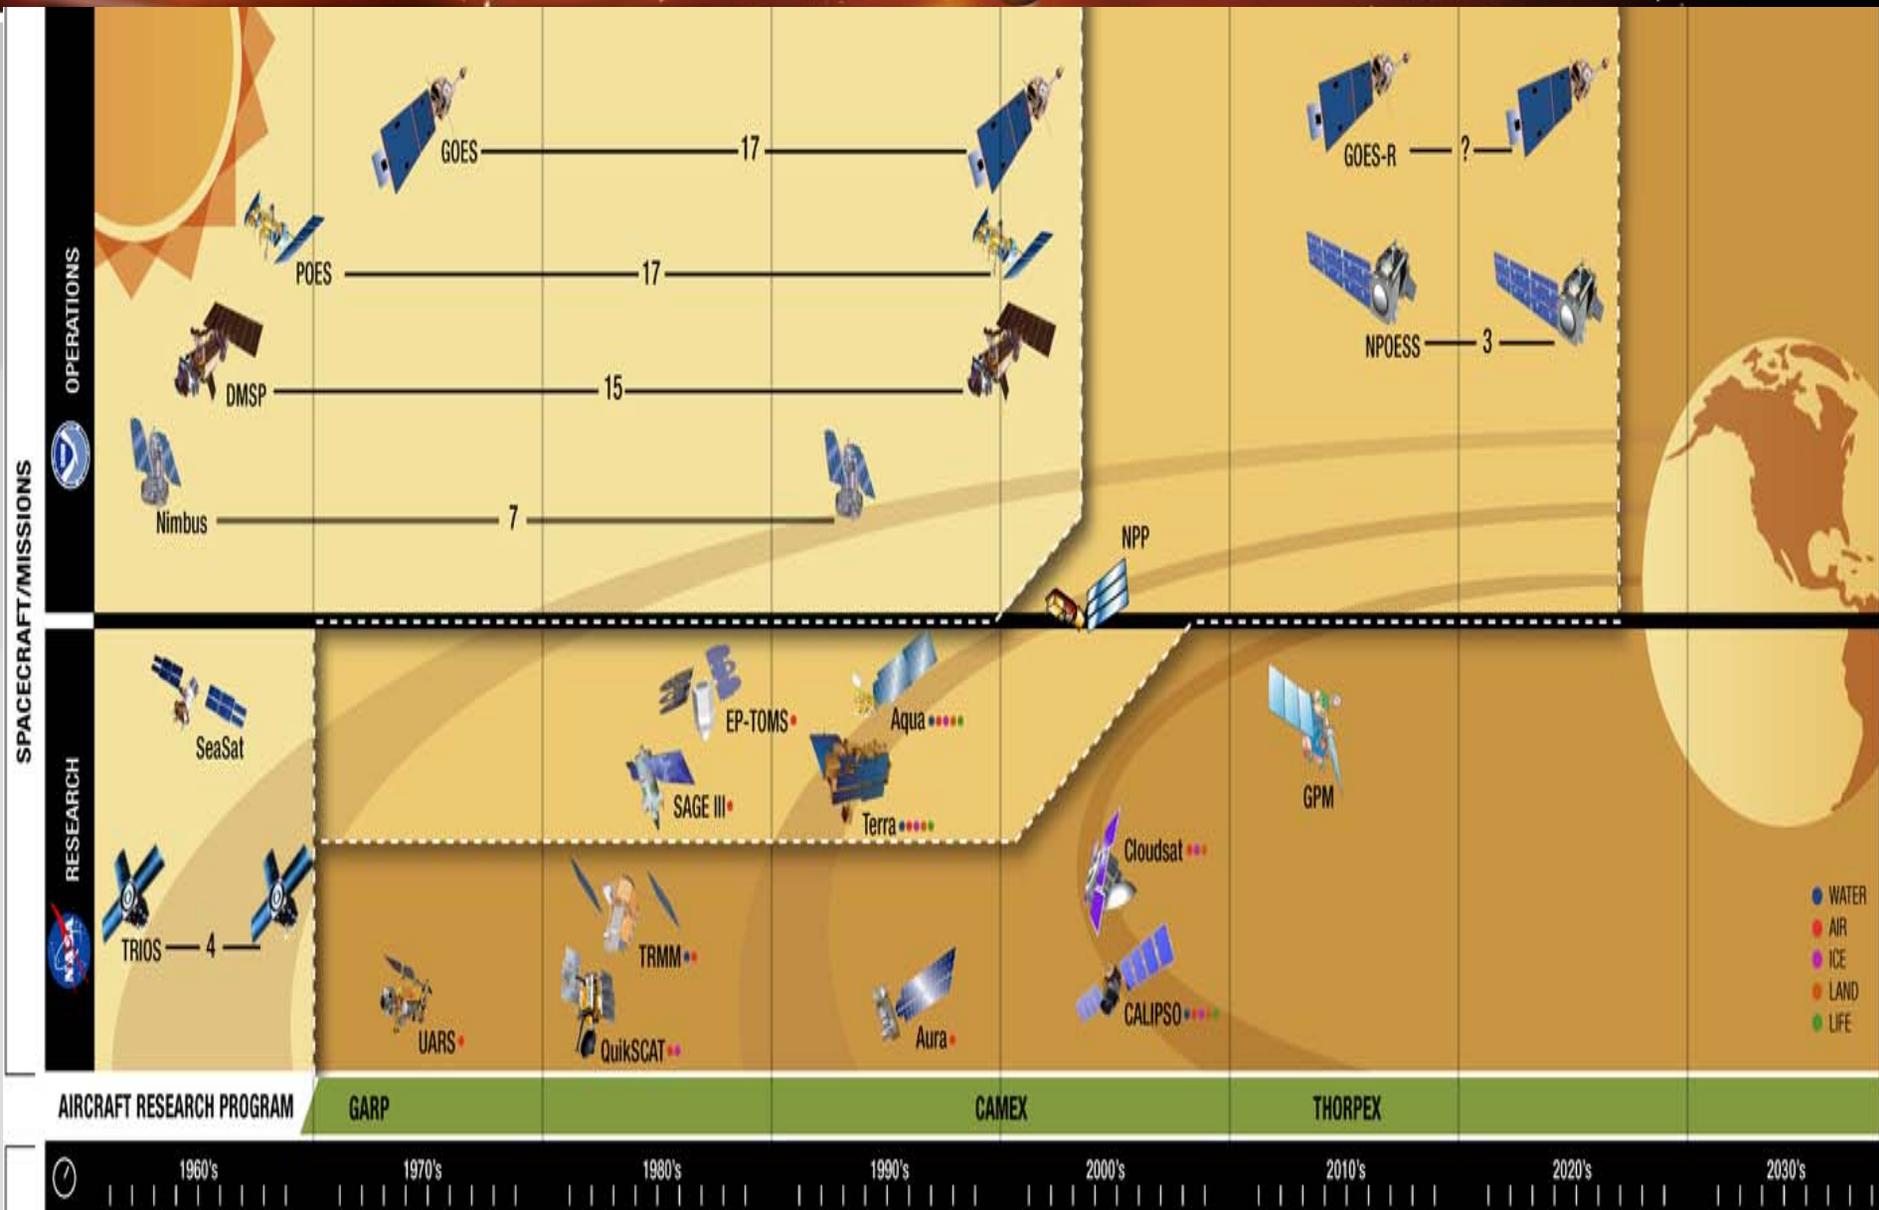

- Establish inventory of potential candidate capabilities
- Develop selection criteria
- Identify Processes: selections, criteria, management reviews
- Establish common definitions and semantics

- Capture candidate capabilities
- Apply criteria to candidates
- Select capabilities for development of implementation plans
- Establish approach for CIP teams

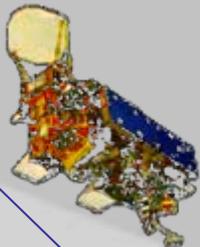

Heritage of Spacecraft Missions transition from Research to Operations

The legacy in weather systems continues...

Aqua (2002)
AIRS, AMSU & MODIS

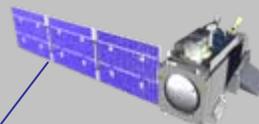

Coriolis (2003)
WindSat

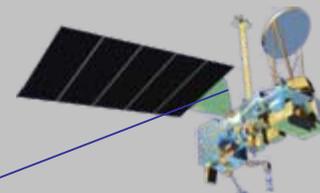

METOP (2005)
IASI/AMSU/MHS & AVHRR

NPP (2008)
CrIS/ATMS
VIIRS
OMPS

NPOESS (2010)
CrIS/ATMS, VIIRS, CMIS,
OMPS & ERBS

*Use of Advanced Sounder Data for Improved
Weather Forecasting & Numerical Weather Prediction*

Joint Center for Satellite Data Assimilation

Spacecraft succession plans...

- In operation
- Under Development
- In Formulation
- Technology Development

* Canceled flight mission; gleaning technology for GOES-R

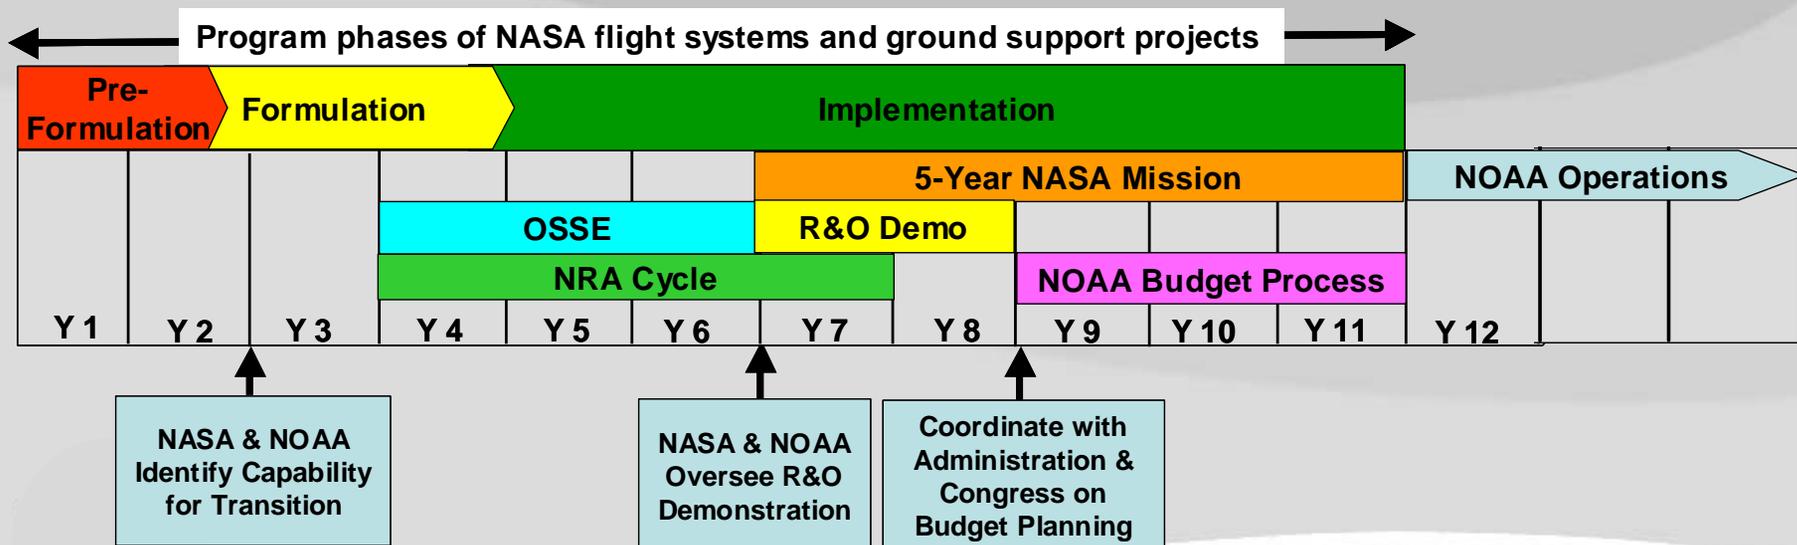

R&O Transition Timeline

The IBPD Earth-Sun System, Objective 14, states:

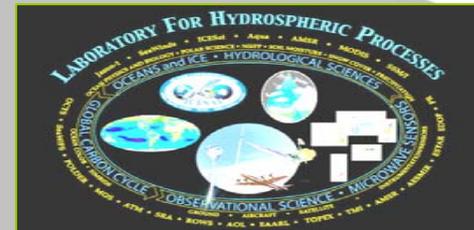

14.1 Transfer 30 percent of NASA developed research results and observations to operational Agencies.

Pressing issues include timing and targets of opportunity:

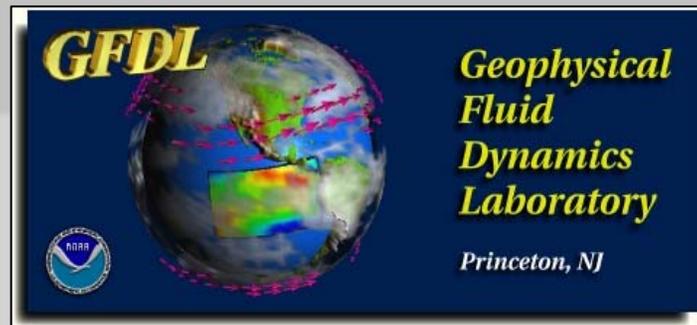

Transitioning Capabilities of Earth-Sun System Models

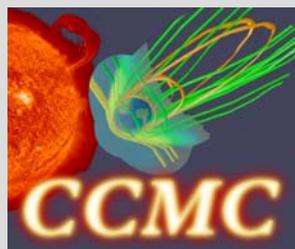

NASA Goddard Space Flight Center

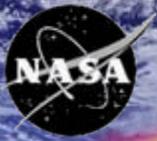

LABORATORY FOR ATMOSPHERES

National Centers for Environmental Prediction

Office of Research and Applications

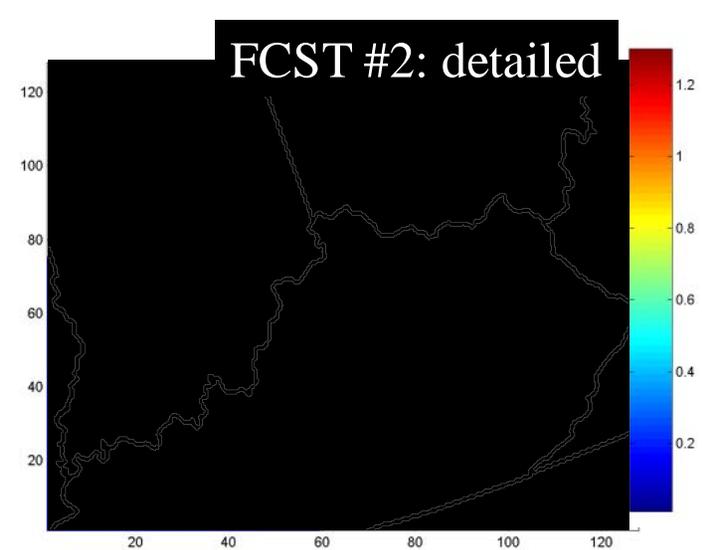

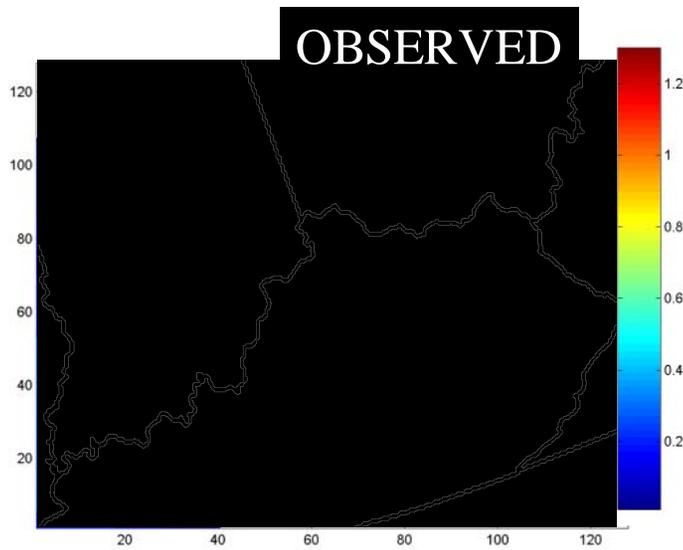

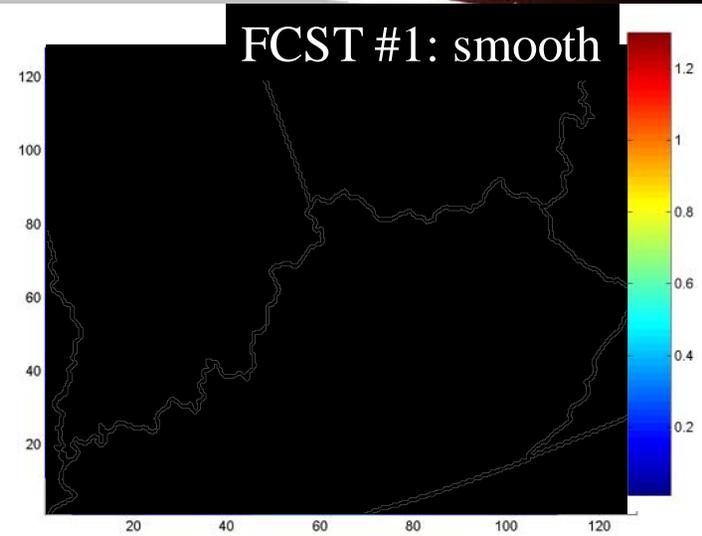

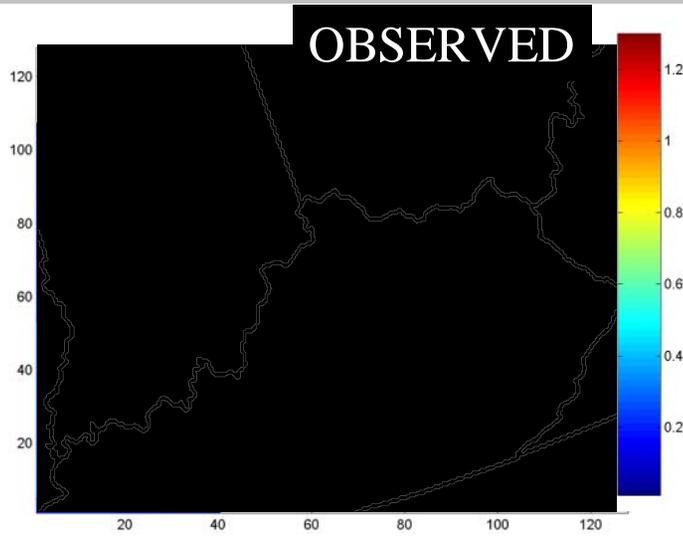

Challenges on the Way Ahead

- **Systematically transitioning appropriate NASA capabilities to evolve operational systems to better serve society**
- **Characterize uncertainty in model forecasts for weather, climate, and natural hazards**
- **Benefiting from increased data handling capacity to handle volume and range of data from Earth-Sun observatories**
- **Evolving an Earth-Sun System Gateway portal to provide interoperability and access between research results and integrators**

Setting the Stage Verification & Validation

“Measures-oriented” (Brooks and Doswell, 1996) approach to verifying these forecasts

Verification Measure	Forecast #1 (smooth)	Forecast #2 (detailed)
Mean absolute error $MAE = \frac{1}{n} \sum_{k=1}^n f_k - x_k $	0.157	0.159
RMS error $RMSE = \sqrt{\frac{1}{n} \sum_{k=1}^n (f_k - x_k)^2}$	0.254	0.309
Bias $BIAS = \bar{f} / \bar{x}$	0.98	0.98
Threat score (>0.45) $TS = H / (F + O - H)$	0.214	0.161
Equitable threat score (>0.45) $ETS = \frac{H - Ch}{(F + O - H - Ch)}$	0.170	0.102
