

Opportunities

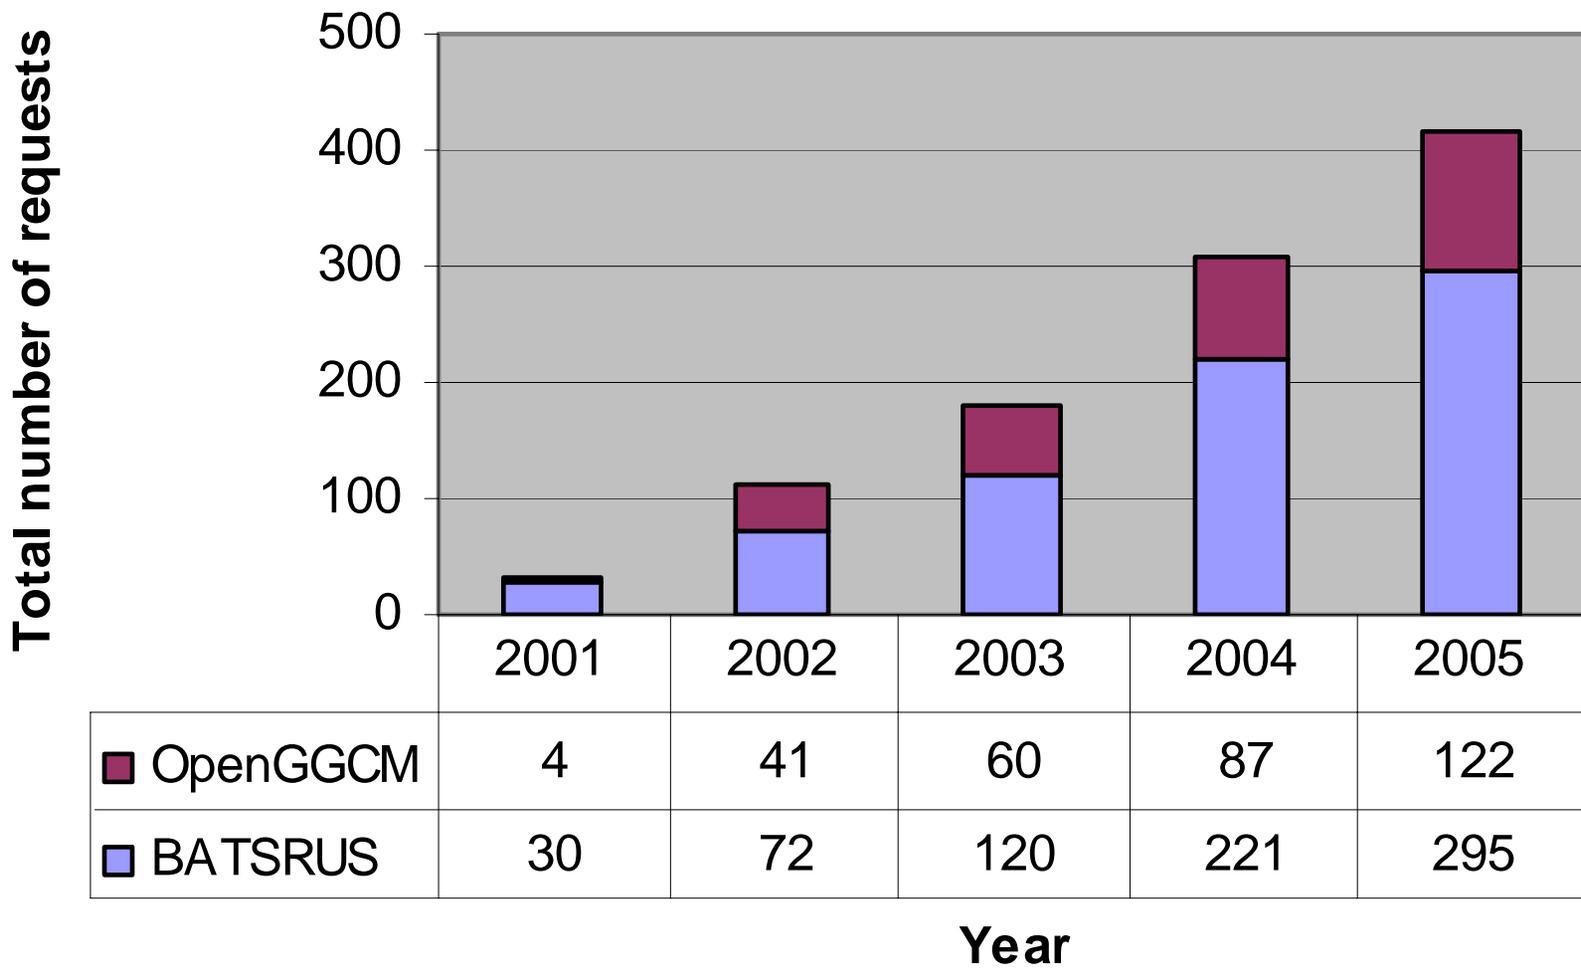

Evolution not Revolution

George Siscoe
Center for Space Physics
Boston University

- **Increase customer pull**
 - CCMC statistics of magnetosphere simulation requests
 - Increase capability
 - Emphasize student involvement
- **Basic science validation**
 - Days of paranoia are over
 - Example of need for *Basic* science validation
 - Joint CCMC campaigns with GEM, SHINE, and CEDAR

Magnetosphere runs on request growth

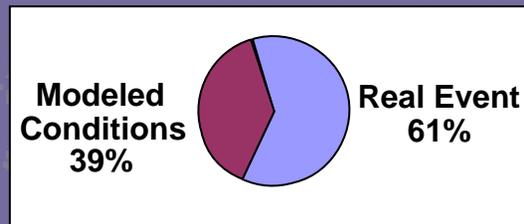

■ OpenGGCM	4	41	60	87	122
■ BATSRUS	30	72	120	221	295

■ BATSRUS ■ OpenGGCM

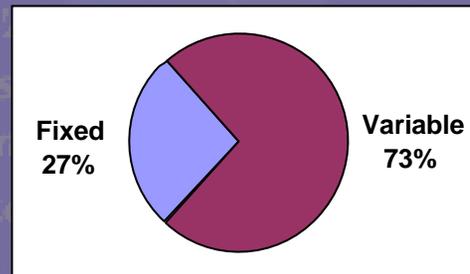

Real event runs vs Modeled conditions runs for BATSRUS and OpenGGCM

	BATSRUS	Open GGCM	Both models
Real Event Simulations	180	75	255
Simulation with Modeled Conditions	114	47	161

Simulations with fixed inflow boundary condition vs ones with time-dependant boundary conditions

	BATSRUS	Open GGCM	Both models
Fixed Inflow BCs	90	21	111
Variable Inflow BCs	204	101	305

Increase Customer Pull

Increase Capability

- Actively evolve user interface
- At least two choices per model type (e.g., BATSRUS and openGGCM)
- Sponsor (perhaps jointly) model-focused workshops

Emphasize Student Involvement

- Encourage CCMC models used in class assignments
- CCMC summer school
- Establish library of standard runs for pedagogic use

Basic science validation

Days of paranoia are over

Early SWMIT model

Recent same

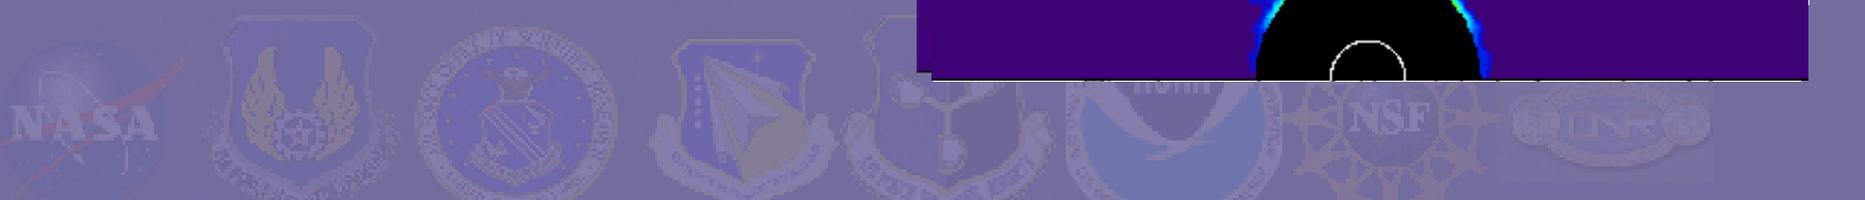

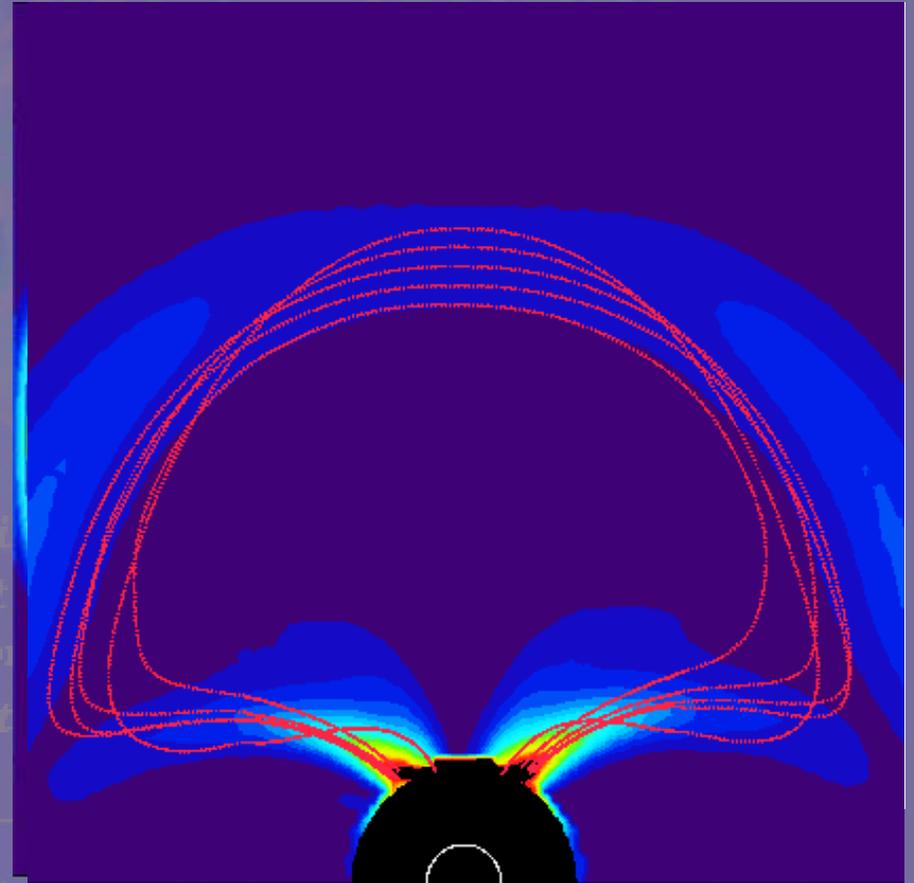

Global MHD simulation

Beautiful theory of plasma sheet

Global MHD simulation

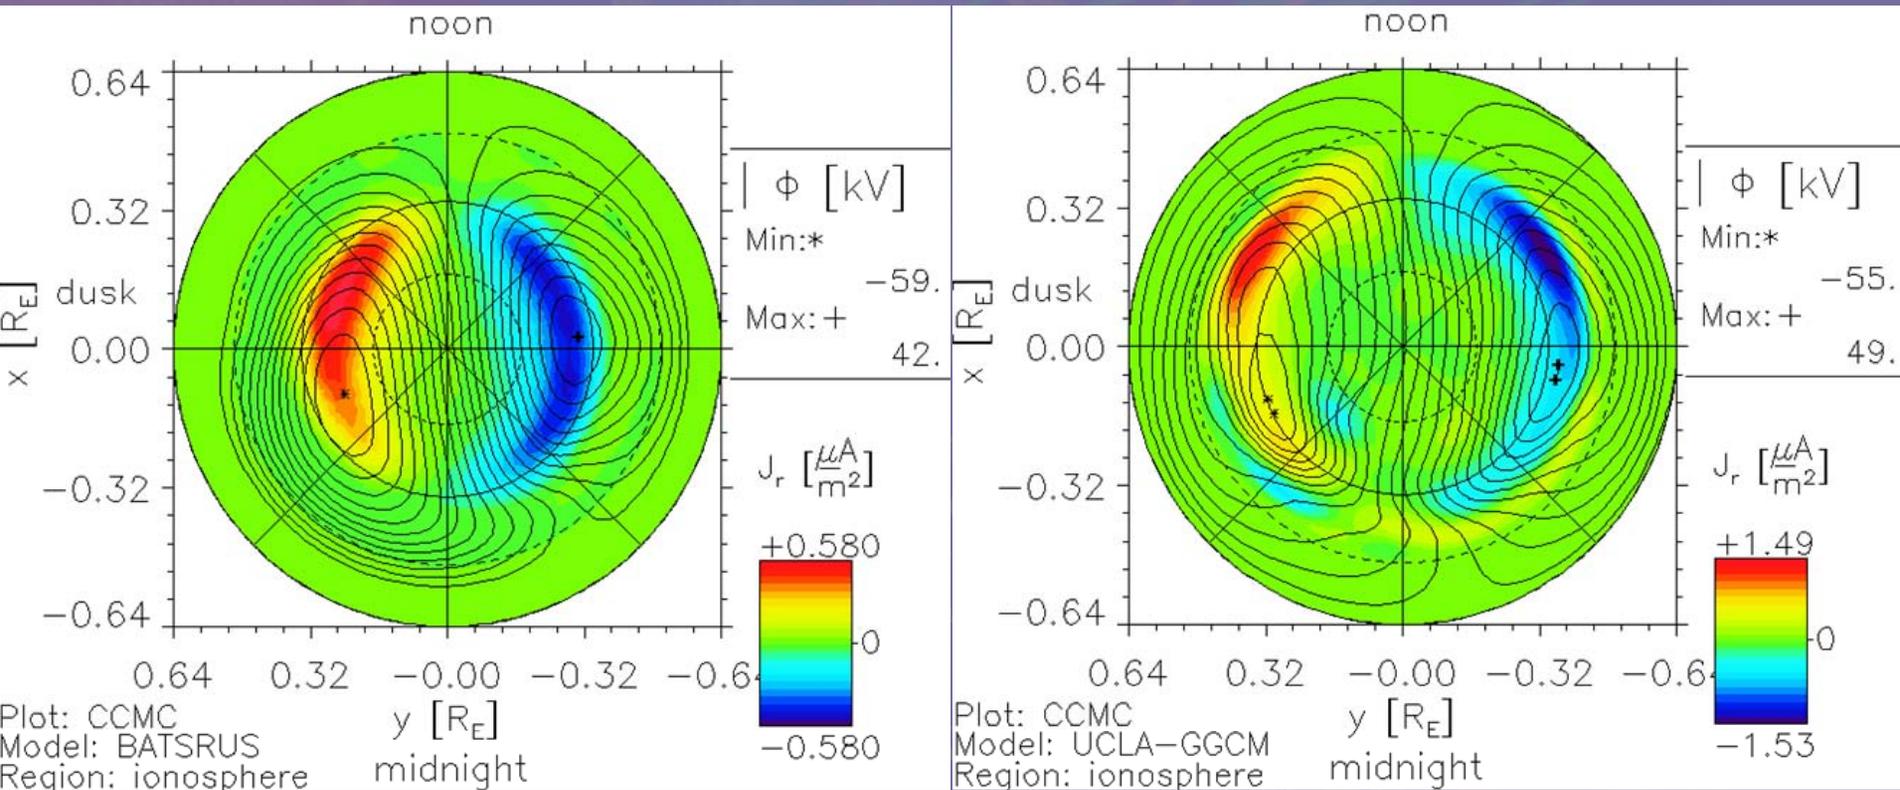

Beautiful region 1 current model

Global MHD simulation

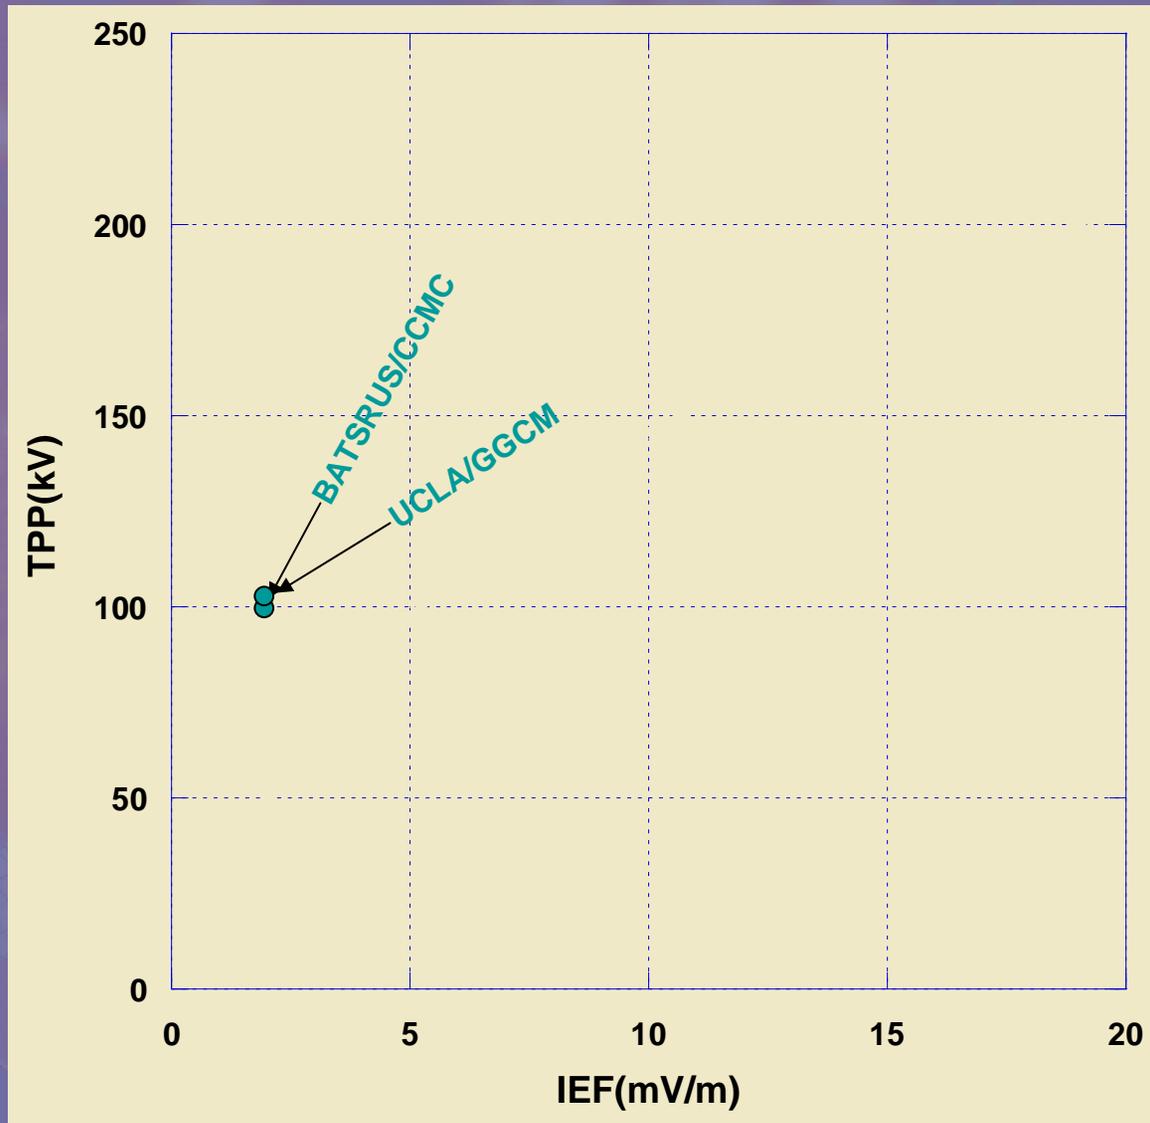

So now it is okay to look at places where the models need basic structural fixes to do new science. Here is an example.

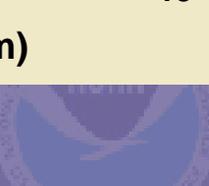

Magnetosphere-Ionosphere Coupling Electrodynamics

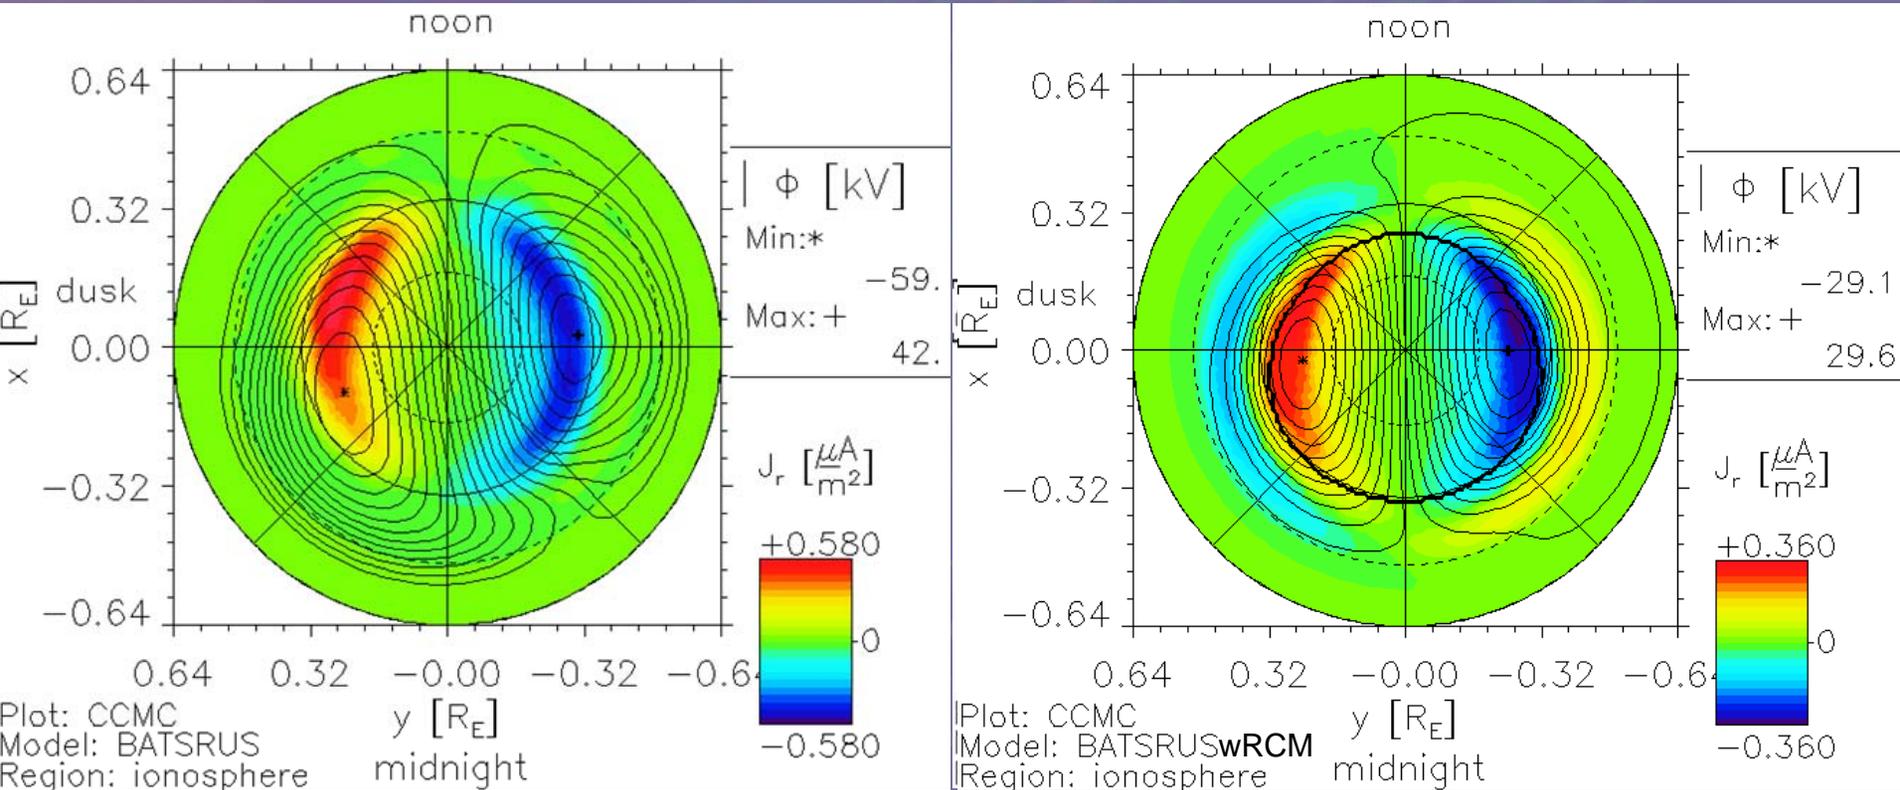

Plot the points

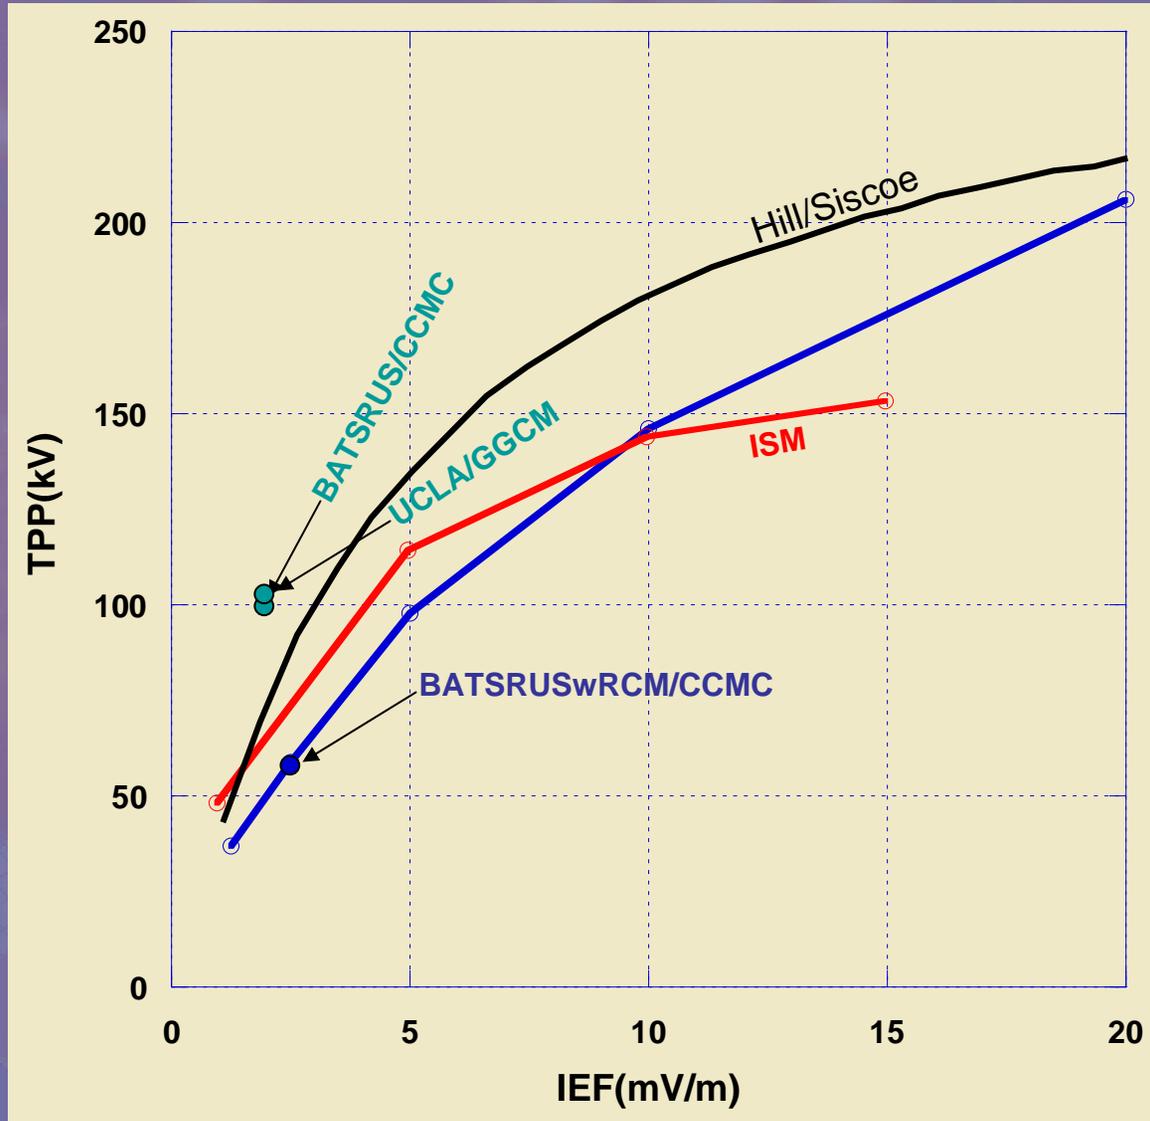

able,
and
ience

Add RCM to BATSRUS

Add to the plot

We don't understand this response to region 2 currents

Solstice Transpolar Potentials in Saturation Domain

Source	Ratio: Winter/Summer
MRC/ISM	1.39
CCMC/UCLA	1.44
CCMC/Mich.	1.83
AMIE: 14 Jan 88 Storm	0.68

The models are in wild disagreement with the observations.

Summary

- **Evolution not revolution**
- **Increase customer pull**
 - CCMC statistics of magnetosphere simulation requests
 - Increase capability
 - Emphasize student involvement
- **Basic science validation**
 - Days of paranoia are over
 - Example: Parallel potentials in MHD simulations
 - Joint CCMC campaigns with GEM, SHINE, and CEDAR

Summary

- **Evolution not revolution**
- **Increase customer pull**
- ***Basic science validation.***
- **Examples illustrate that CCMC models give the community powerful tools with which to carry out such investigations.**

support and perform the research and development for next generation space science and space weather models"
