Director's Report

Michael Hesse

<http://ccmc.gsfc.nasa.gov>

NASA Goddard Space Flight Center

Workshop purpose

- Assess (evolution to) CCMC state-of-affairs
 - What went well
 - What could have gone better
- Provide input for future directions
 - Science service
 - Operations service
 - Collaborations with modelers
- Discuss other topics of interest

Our job is to listen to you...

... begin by summary of current status

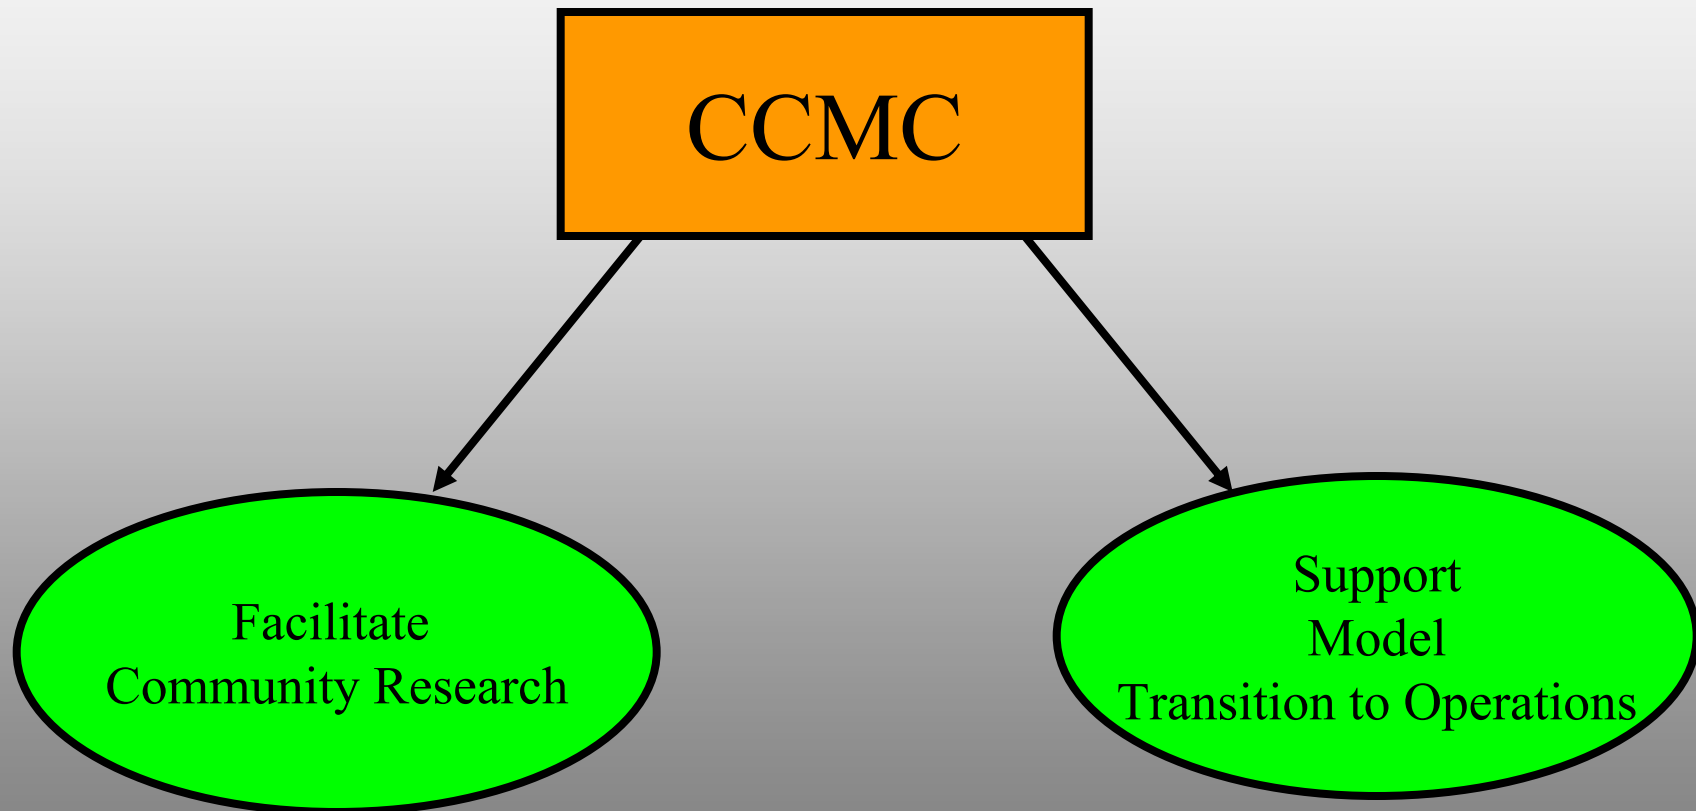

“A US multi-agency partnership to enable, support, and perform the research and development for next generation space science and space weather models”

CCMC goals

International Research Community

NASA, DoD, and NOAA, other Space Weather needs

CCMC staff

CCMC Mission Statement

The CCMC is a multi-agency partnership to enable, support and perform the research and development for next-generation space science and space weather models.

GEM Modeling Challenge

CCMC is supporting GEM 2008/2009 Modeling Challenge organized by the GGCM Metrics and Validation Focus Group. **Note that the new DST index metric study has been added to the challenge!** Challenge results were discussed at the pre-AGU GEM Mini-workshop held on December 13, 2009.

[Find out more](#)

Model Additions/Updates at the CCMC

- **CORHEL V4.2** supports two coronal models (MAS and a new CORHEL implementation of the Wang-Sheeley-Argge method) and two Heliospheric (MAS and ENLIL) and offers six possible model combinations. It works with synoptic magnetograms from six different observatories.
- The new **Heliospheric Tomography** model developed for **Solar Mass Ejection Imager (SMEDI)**, the Air Force/NASA satellite, launched on January 6, 2003, is now available.

CCMC Services

- **Announcement:** Due to scheduled electrical work at Goddard the CCMC website will be down on Saturday, January 23rd, between 6:30am and 1:00pm
- We provide, to the scientific community, access to modern space research models
- We test and evaluate models
- We support Space Weather forecasters
- We support space science education

Latest Additions to the CCMC Services

- **Integrated Space Weather Analysis System** is a web-based dissemination system for NASA-relevant space weather information.
- **Space Weather Awareness at NASA** space weather information portal.
- **LWS Supported Tools and Methods**
- **Kameleon software:** model output from different models can now be stored uniformly in a common science data format. Users can request the CDF-formatted output for a CCMC run.
- **Movies on Request:** you can now request to generate a movie, images and ASCII data files for each time step of a model run.
- **CCMC Space Weather on Google Earth:** CCMC is now providing space weather-related Google Earth overlays.

Science user support

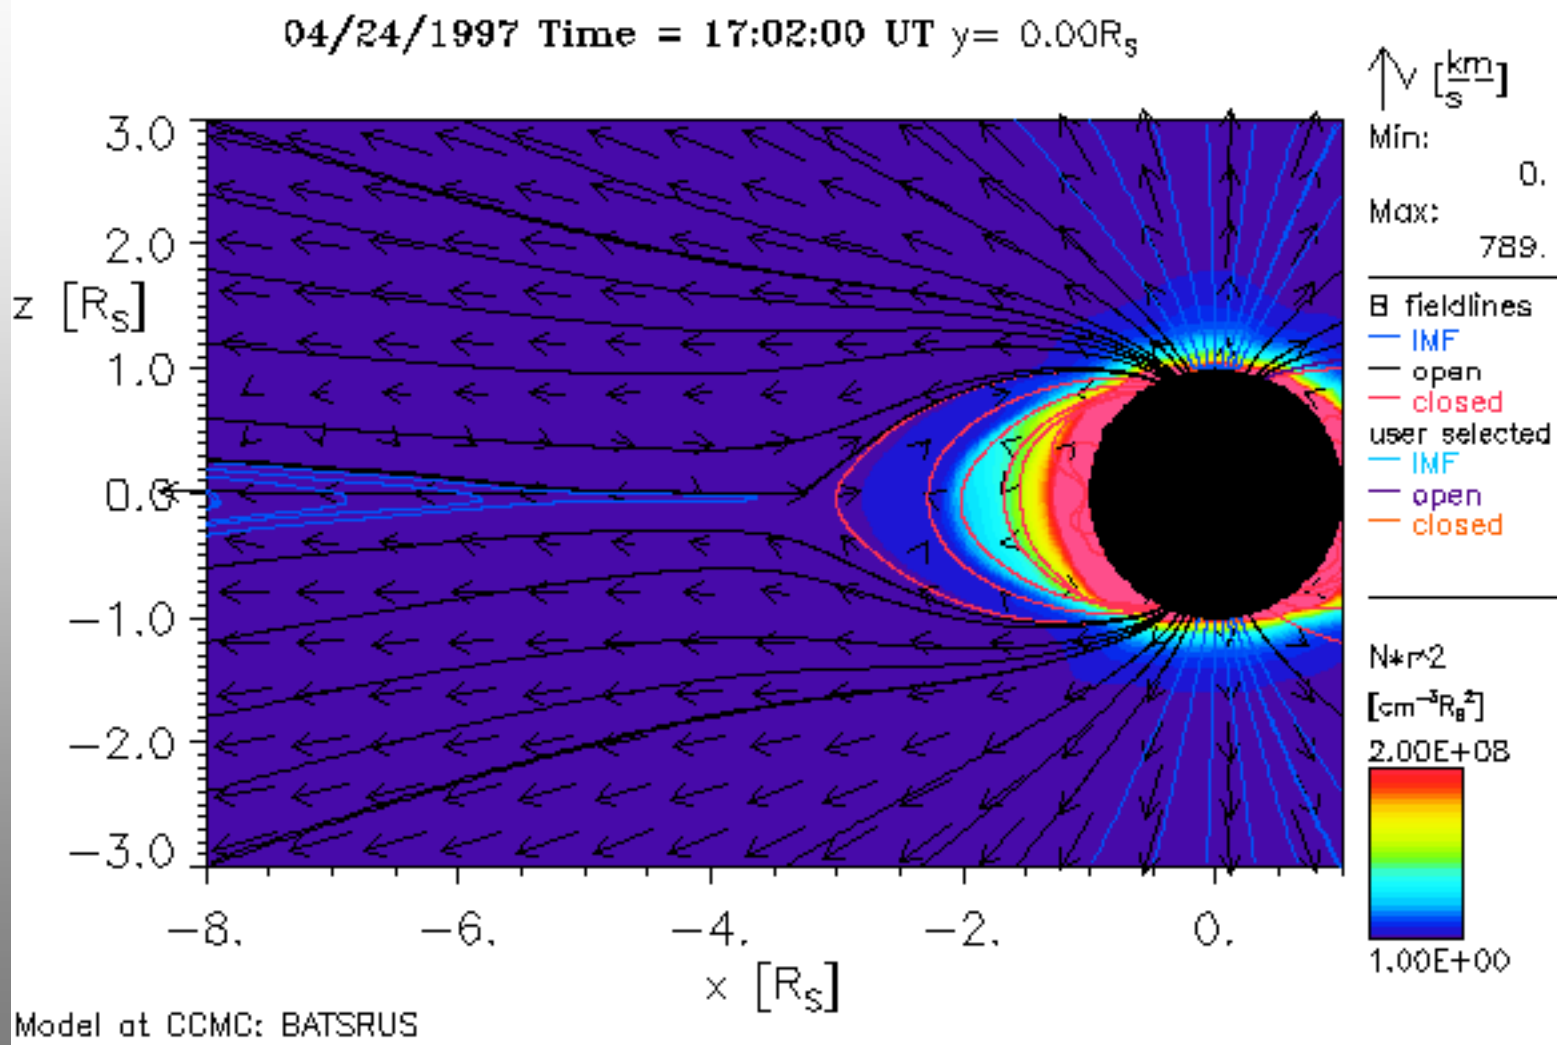

Goals:

- **One stop shopping for modern space science models**
- **Easy access to modern models for non-experts**
- **Simple-to-use, unified interfaces**
- **Advanced, tailored visualization tools**
- **Continuous improvements through user feedback**

Update Plot will update (generate) the plot with the chosen time and plot parameters below.
This will take some time (typically 10-30s) as data is read in and processed.

Choose data time:
Date: 2000/01/01 Time: 02:00:00

- or -
 Change time by moving
-1 output steps

- or -
 Create GIF movie with current plot settings (not for SWX plot modes)
Note: This is a queue submission system requiring the following three additional inputs:

- **Start Time:**
Date: 2000/01/01 Time: 00:00:00
- **End Time:**
Date: 2000/01/01 Time: 02:00:00
- **Email address** for notification (replace the example email address with yours):
your.name@your.domain
Note: The movie will be *requested* but **NOT be shown** in this interface. You will get an email with a download URL when the request has been completed (this will take at least a few minutes). Only one request can be pending at a time for each client IP or email address.

Plot Options:

- Exclude region around the Earth** up to $6 R_E$
- Image magnification** 1 (all images; use ≥ 1.25 for 3D Flowlines)
- Line thickness** 1 (flow lines, arrows)
- Character thickness** 1 (all annotations)
- Allow variable plot image size** (all 2D plots: aspect ratio dx/dy between 0.3 and 4)
- Show simulation grid** (disabled with 3D-Surface)
- Show magnetopause** (positions in 2D cuts passing within $12 R_E$ of Earth will be listed at the bottom)
Tolerance (between 0.01 and $1 R_E$): 0.01
- Interpolate data onto equidistant grid** (available with 3D-Surface and Vector; recommended for plots with Vector)

Choose **Plot Mode:** ColorContour (2D)

Choose **quantity** to be displayed (some **Plot Modes** require up to three choices):
Q 1: N Q 2: N Q 3: N

Examples of Space Weather Tools

Space weather tools: benefits

- Facilitate model evaluation through a relevant product
- Support NASA robotic mission ops (direct) and human missions (through SRAG)
- Support bootstrapping of services at partners in government and industry
- Showcase value of space research and modeling at NASA, NSF, AFOSR, ONR... to interests in government as well as across society

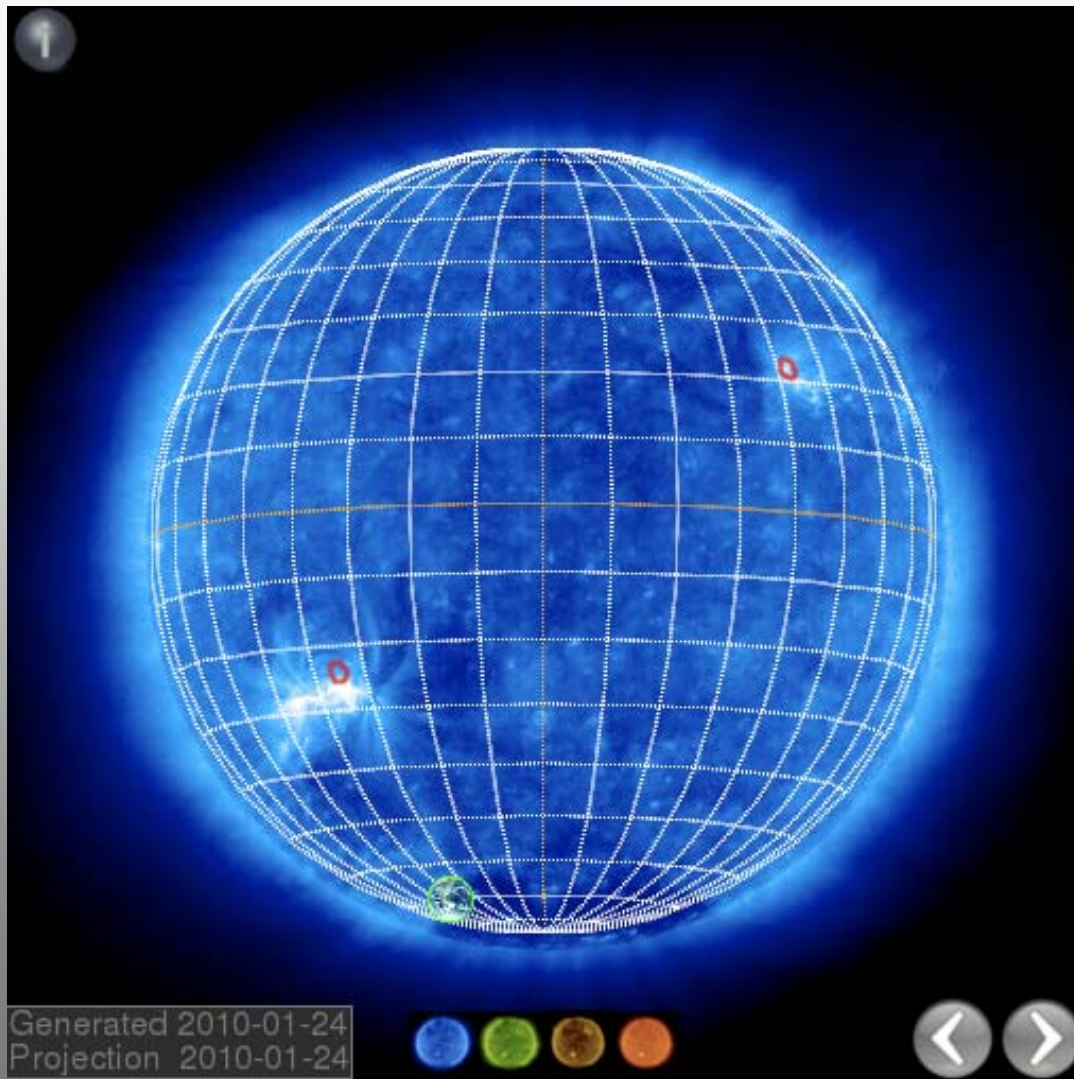

Flare monitoring product (U. Bradford, UK)

Based on WSA/ENLIL, input from AFWA

Solar Wind Forecasts

RT ops imminent, addition of WSA

Model: WSA/ENLIL (CISM), SWMF (CSEM)

SEP forecasts

A. Posner/NASA/HQ

Presently Available Tools

L1 Plasma and magnetic field:
Geomagnetic storm forecast
Includes CME forecast
Up to 48h forecast
Updated daily/on CME obs.

Solar wind forecast:
Based on STEREO behind
~48h forecast

Magnetospheric information

Magnetopause position:
S/C orientation
Updated every 4mins
~45min forecast

1-10keV plasma density:
S/C charging
Updated every 4mins
~45min forecast

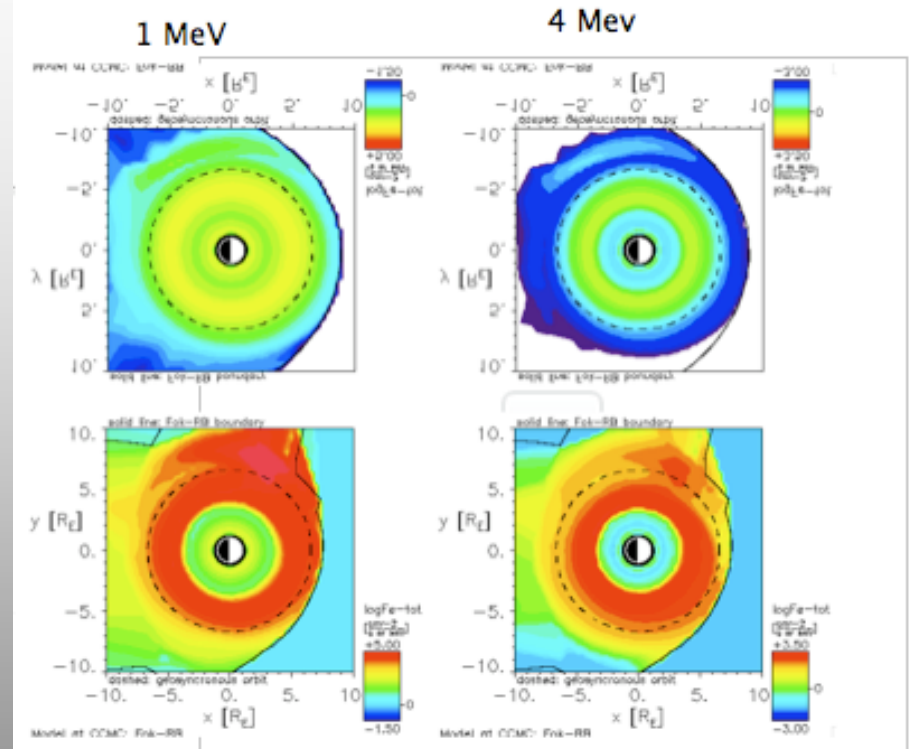

Model: SWMF T. Gombosi et al. (CSEM)

Magnetospheric information

Radiation access to upper atmosphere:
 PC Absorption, high flyer
 Updated ~4mins
 ~45min forecast

1keV-10MeV electron fluxes:
 S/C charging, SEU, radiation hazards
 Updated every 4mins
 ~45min forecast

Magnetospheric information

History plot of Dst from SWMF model

Dst:
Input for various products
Updated ~4mins
~45min forecast

Atmospheric Joule heating:
Atmospheric drag
Updated ~4mins
~45min forecast

Magnetospheric information

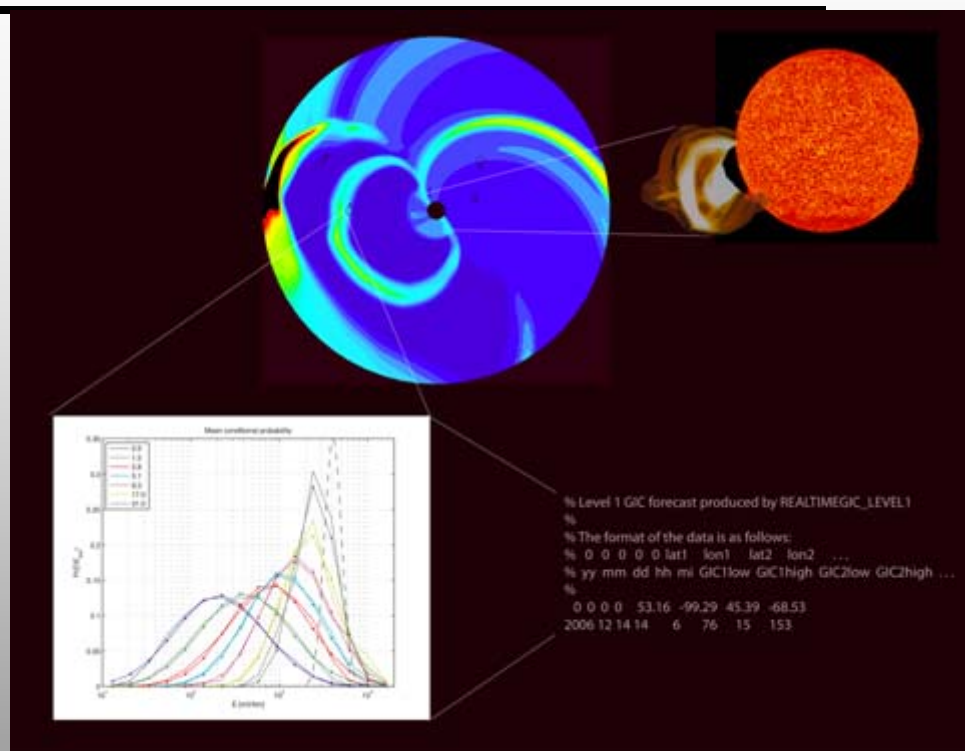

Ionosphere and ground information

HF absorption:
Executing in real-time

Model: AbbyNormal V. Eccles (USU)

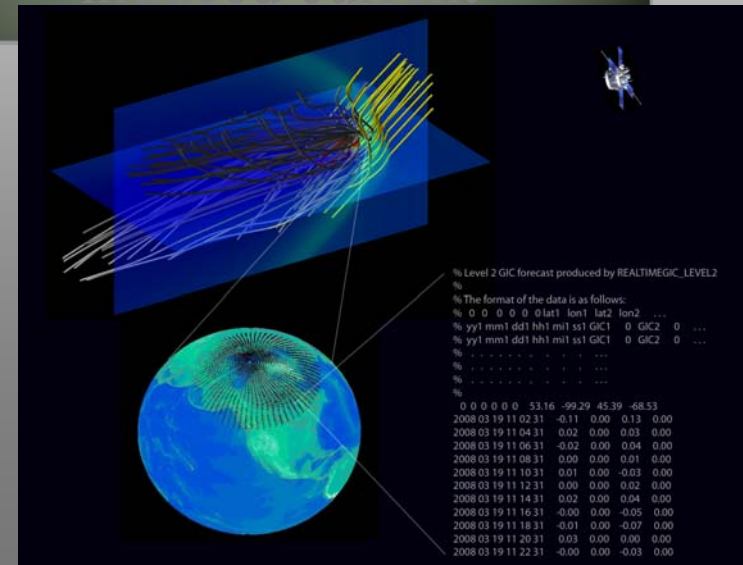

GIC Warning:
Electric power grid safety
Updated every 4mins
~45min forecast
Different mode for CME events
Model: WSA/ENLIL, SWMF, A. Pulkkinen

Realtime runs – applications

- Solar Shield - Forecasting and Mitigating Solar Effects on Power Transmissions Systems in North America
- CCMC and Electric Power Research Institute (EPRI) collaboration
- Two-level GIC forecasts
 - Level 1 providing 1-2 day lead-time.
 - Enlil Cone model $\mathbf{v} \times \mathbf{B} \rightarrow \mathbf{E}_g$
 - Level 2 providing 30-60 min. lead-time.
 - GM/IE driven by ACE data $\rightarrow \mathbf{E}_g$
- Coupling to EPRI's SUNBURST decision support tool.

Model evaluations: V&V and metrics

Decision makers and operational agencies need model evaluations

- Science-based validation: Compare model output to measurements for select events, detailed analysis
- Metrics studies: Repeatable comparison between model output and measurements, “one number”

Need to be blind studies, performed by independent agent

Specifically, CCMC does not own candidate models

Metrics study (AFWA request)

Predicting MeV electron intensity in radiation belt

Evaluated model:

- Software predicting MeV electron intensity at the geostationary orbit
 - Developed at: APL/UPOS
 - Input: real-time ACE data
 - Output: polar cap potential
- Quiet vs Storm period
 - Now also for Dst model

Reference Model	Skill Score		
	Whole interval	Quiet	Stormy
1-day persistence	-0.3544	-0.3864	0.2355
Mean	0.2041	0.2294	0.2047
27-day recurrence	0.2935	0.2468	0.3629

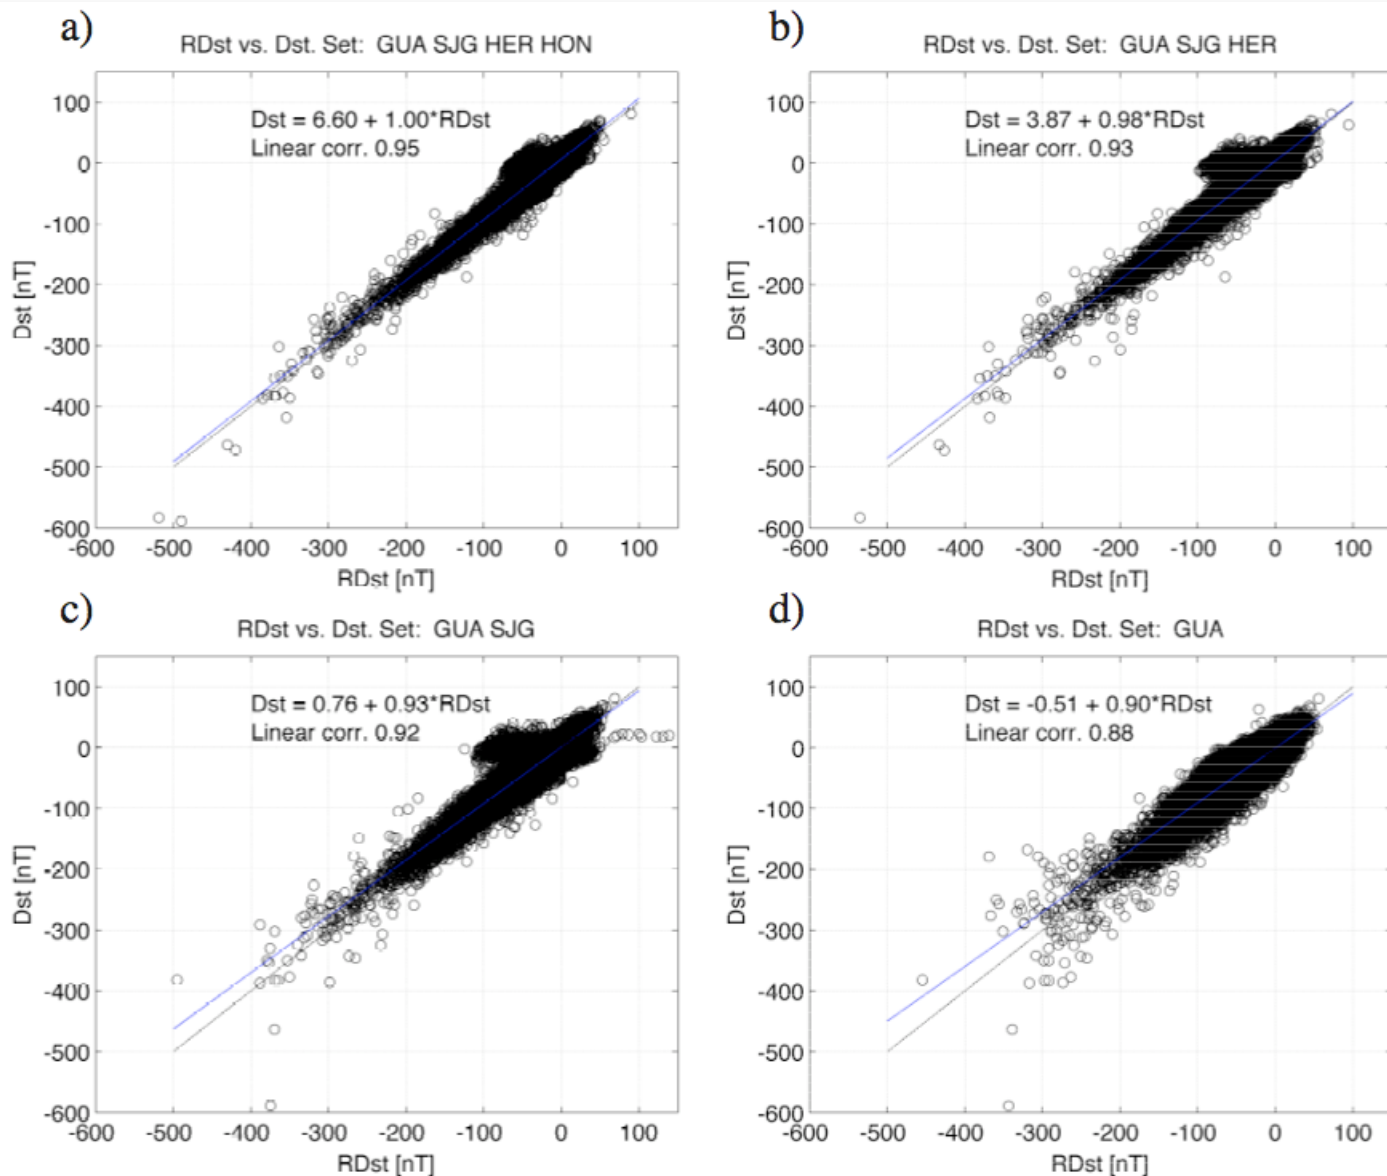

Comparison of Actual vs. Predicted Fluxes

ENLIL cone model: CME arrival time

Reference Model:

Average of Halo CME speed from the CME catalogue).

$$V_{\text{avg}} = 850 \text{ km/s}$$

Average propagation time to the ACE satellite:

Typical error: +/-6 hours

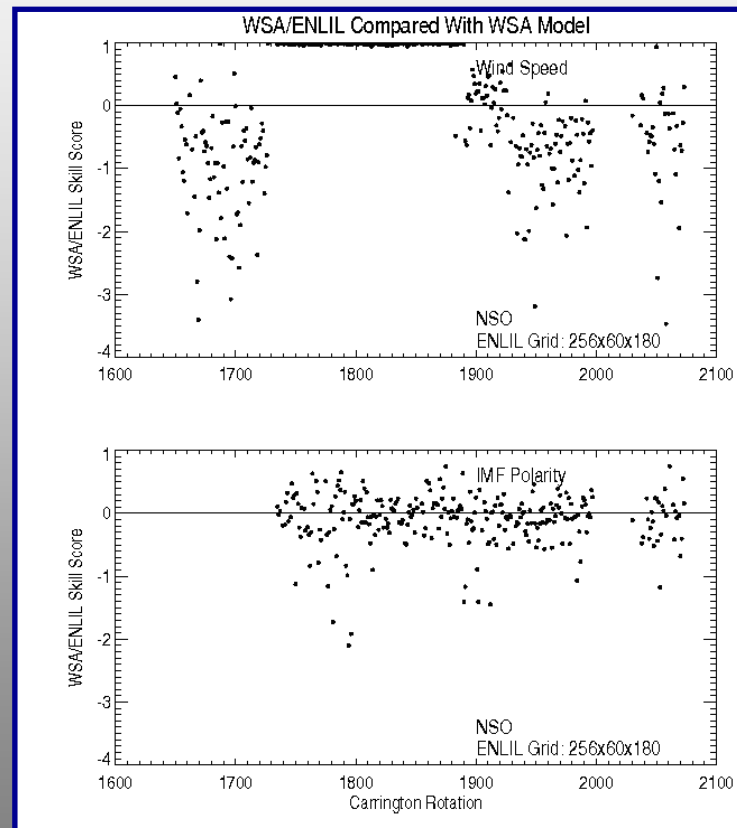

vs.

Standard model error: +/- 8 hours

Validation

- Ambient/Realtime
 - Use WSA as baseline
 - Evaluate both Skill Scores and ‘event’ forecasting
 - ‘Event’ detection algorithm published
 - Comprehensive WSA validation in press
 - WSA/ENLIL validation in preliminary stages
 - SWMF updated – preliminary validation should be completed soon
 - Fieldline tracing in WSA/ENLIL

GEM metrics study, community and SWPC support

A. Pulkkinen, M. Kuznetsova, L. Rastaetter, A. Chulaki

Cone model forecasting: the next step

- Current Operational system
 - Manual generation of cone model parameters from LASCO difference images
- Automated system (paper published)*
 - Fit error estimates define ‘ensemble forecast’ parameter set

Original image

Innovative dissemination: Google Earth

R2O workshop (October 2007)

Tool for Space Weather Architecture Planning

- <http://ccmc.gsfc.nasa.gov/R2O>

- Expose models to operators
- Identify forecast products
- Identify optimal display
- Forum for feedback
- Future workshop tailored to AFWA needs

CCMC/R2O - release 11

NASA mission ops workshop 9/09

Approximately 30 individuals from NASA mission operations in person or through audio-visual remote access.

Space Science Mission Requirements

¹Including characterization of galactic cosmic rays and solar protons.

²Including auroral electron fluxes.

³Polar cap size, magnetic cutoff rigidity, Kp, Ap and Dst indices, f10.7 flux, location relative to different magsph. regions.

⁴Provided that, for example, TDRSS space weather beacon can provide the information to spacecraft.

⁵Including information about the start time, intensity and the end time of the event.

US Air Force Weather Agency partnering

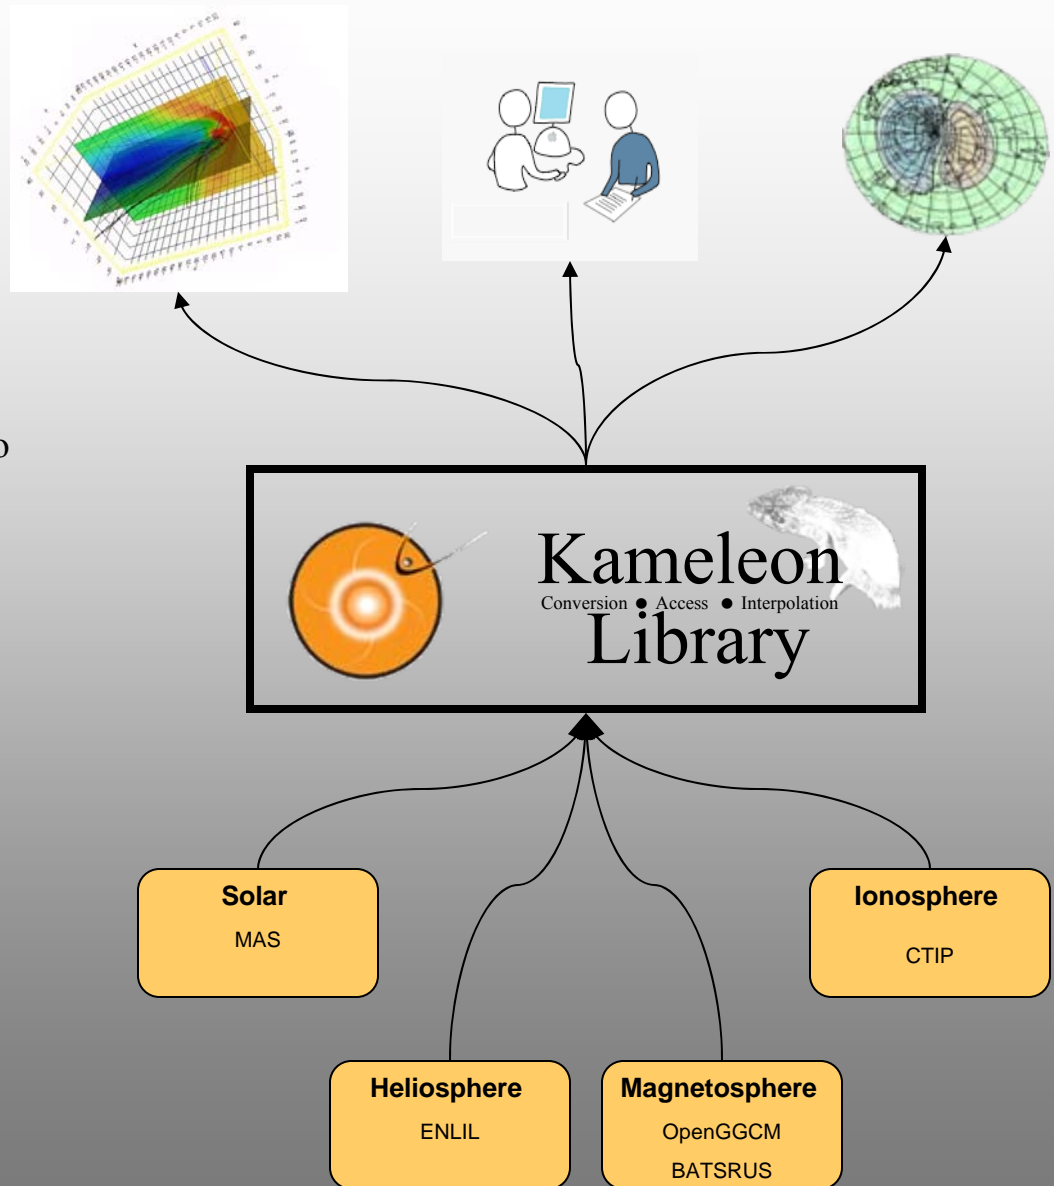

Simulation data standardization

Kameleon Software Suite

- Converts and stores disparate data sets into self-descriptive standardized files
- Comprehensive metadata model applied to each file
- Library provides direct data access to converted space weather data
- Interpolation, metadata extraction, & derived variable calculations available
- Library callable from any C-supported programming language or application
- Promotes data reuse & code reuse
- Various library improvements
- Available to all interested users

Education

Students

- Jonathan Conti-Vock

- Thea Falkenberg

- Patrick Zhou

- Derek Andeweg

Students

- Brian Elliott

- Jeff Garneau

Other roles in education

- K-12 and college:
 - Introduction to magnetosphere (George Siscoe), now web accessible, demo later
 - Support college classes (e.g., UCLA/Ray Walker)
 - Supported space weather classes at George Mason and U. Colorado
 - Presentations at local Elementary and Middle Schools
 - Presentation at 2008 and 2009 CISM workshops
 - Not all university uses are known!
 - Supported LWS student workshop
 - Working with George Mason U. grad. student
 - Created “science on the sphere” display at GSFC’s visitor Center

....

Challenges

- Manage the RoR load
- Manage the data load, incl. archiving
- RT run maintenance
- Manage IT security needs and requirements
- Small staff - large workload

Future of CCMC Research Support

- Expand strong service to (international) research community
 - Supporting STEREO, THEMIS, IHY...
 - Continue to heed customer feedback
- Expand close collaborations with model owners
- Collaborate with related activities (CSEM, CISM, ...)
- Make new models rapidly available to science customers
 - CCMC is designated repository for LWS/TR&T-produced models
- CCMC education support
 - AFIT graduate students
 - USAF Academy
 - NASA summer student program
 - Supporting courses at UCLA, UColorado, George Mason...
- Always looking for feedback/suggestions to develop services

Future of CCMC SWx Support

- Serves as a tool by which science progress at NASA, NSF, AFOSR, ONR feeds into Space Weather operations
- Focus on science models with operational benefits
- CCMC has unique experience in RT ops
- CCMC has trusted relation with model owners
- Partnering with AFWA, Transition support for SWPC
- CCMC models and data streams supporting NASA Robotic Mission ops right now
 - Model output tailored to operator needs -> ISWA project
 - Quasi-operational model results/forecasts already existing
- Much more is possible – suggestions and help are invited!

Thank you!!

- Our Sponsors: NASA and NSF
- The model owners
- Our users
- The CCMC staff
