Community Coordinate Modeling Center

*Established in 2000 as an essential element
of the [National Space Weather Program](#)*

*to facilitate research & development for the
[next generation of space environment modeling capability.](#)*

Prior to CCMC

Models accessed and used by developers only.

“Valley of Death” between research and space weather applications

CCMC is a Game Changing Solution

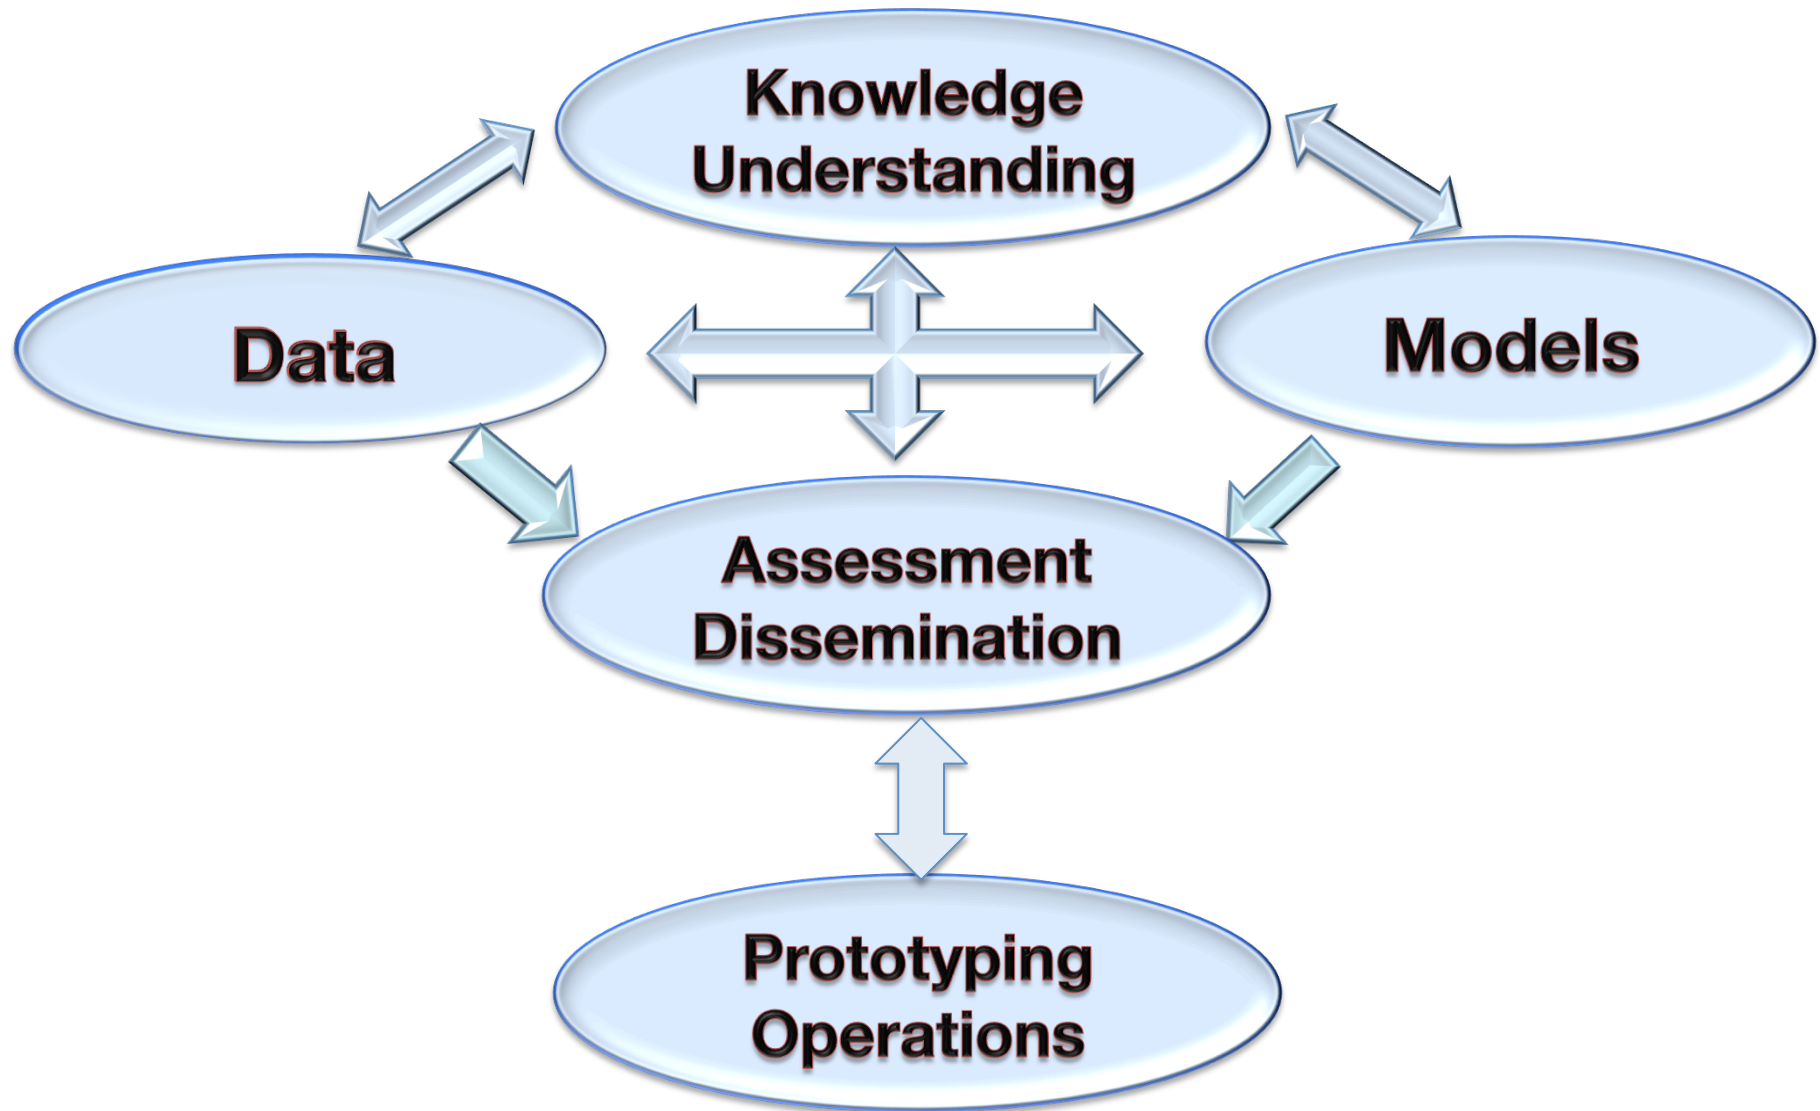

<http://ccmc.gsfc.nasa.gov>

CCMC transformed the way how advanced models are utilized in research

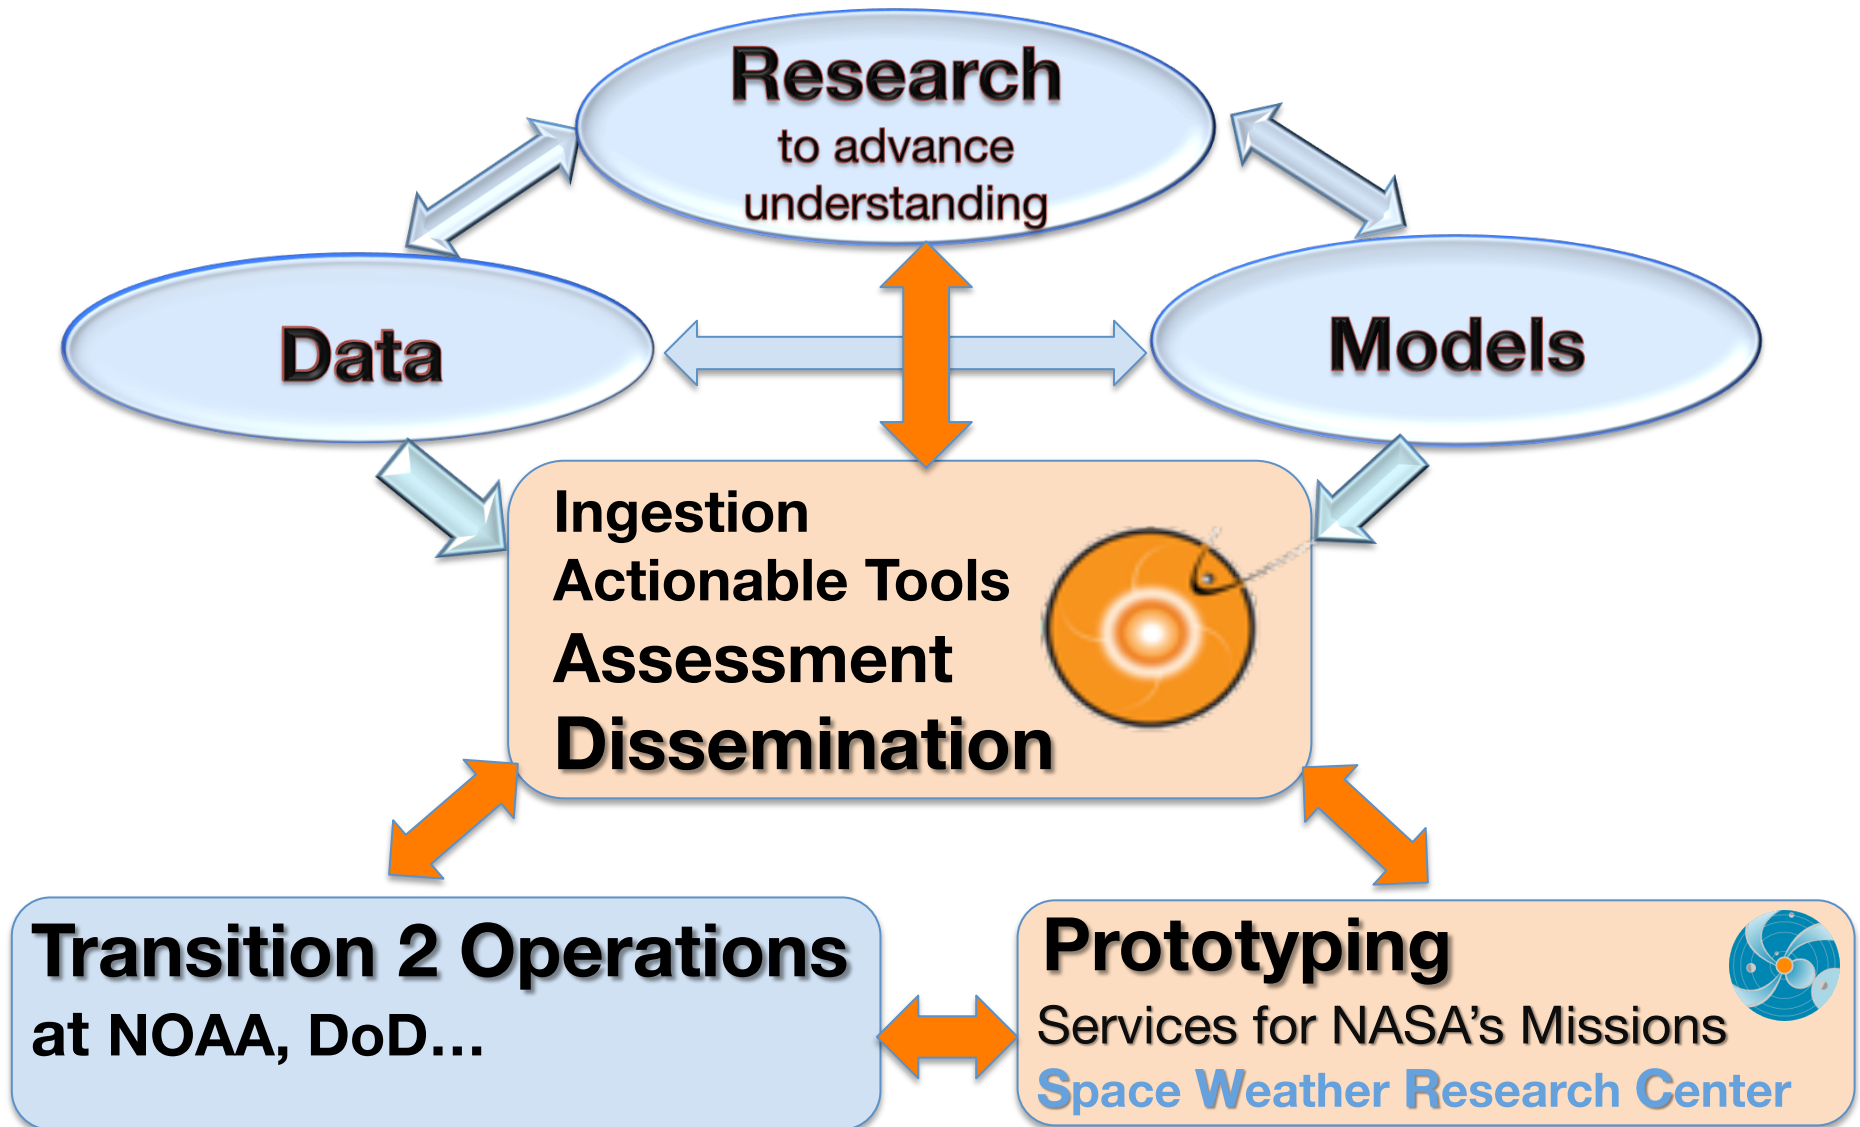

Pioneered the path from Research to Operations

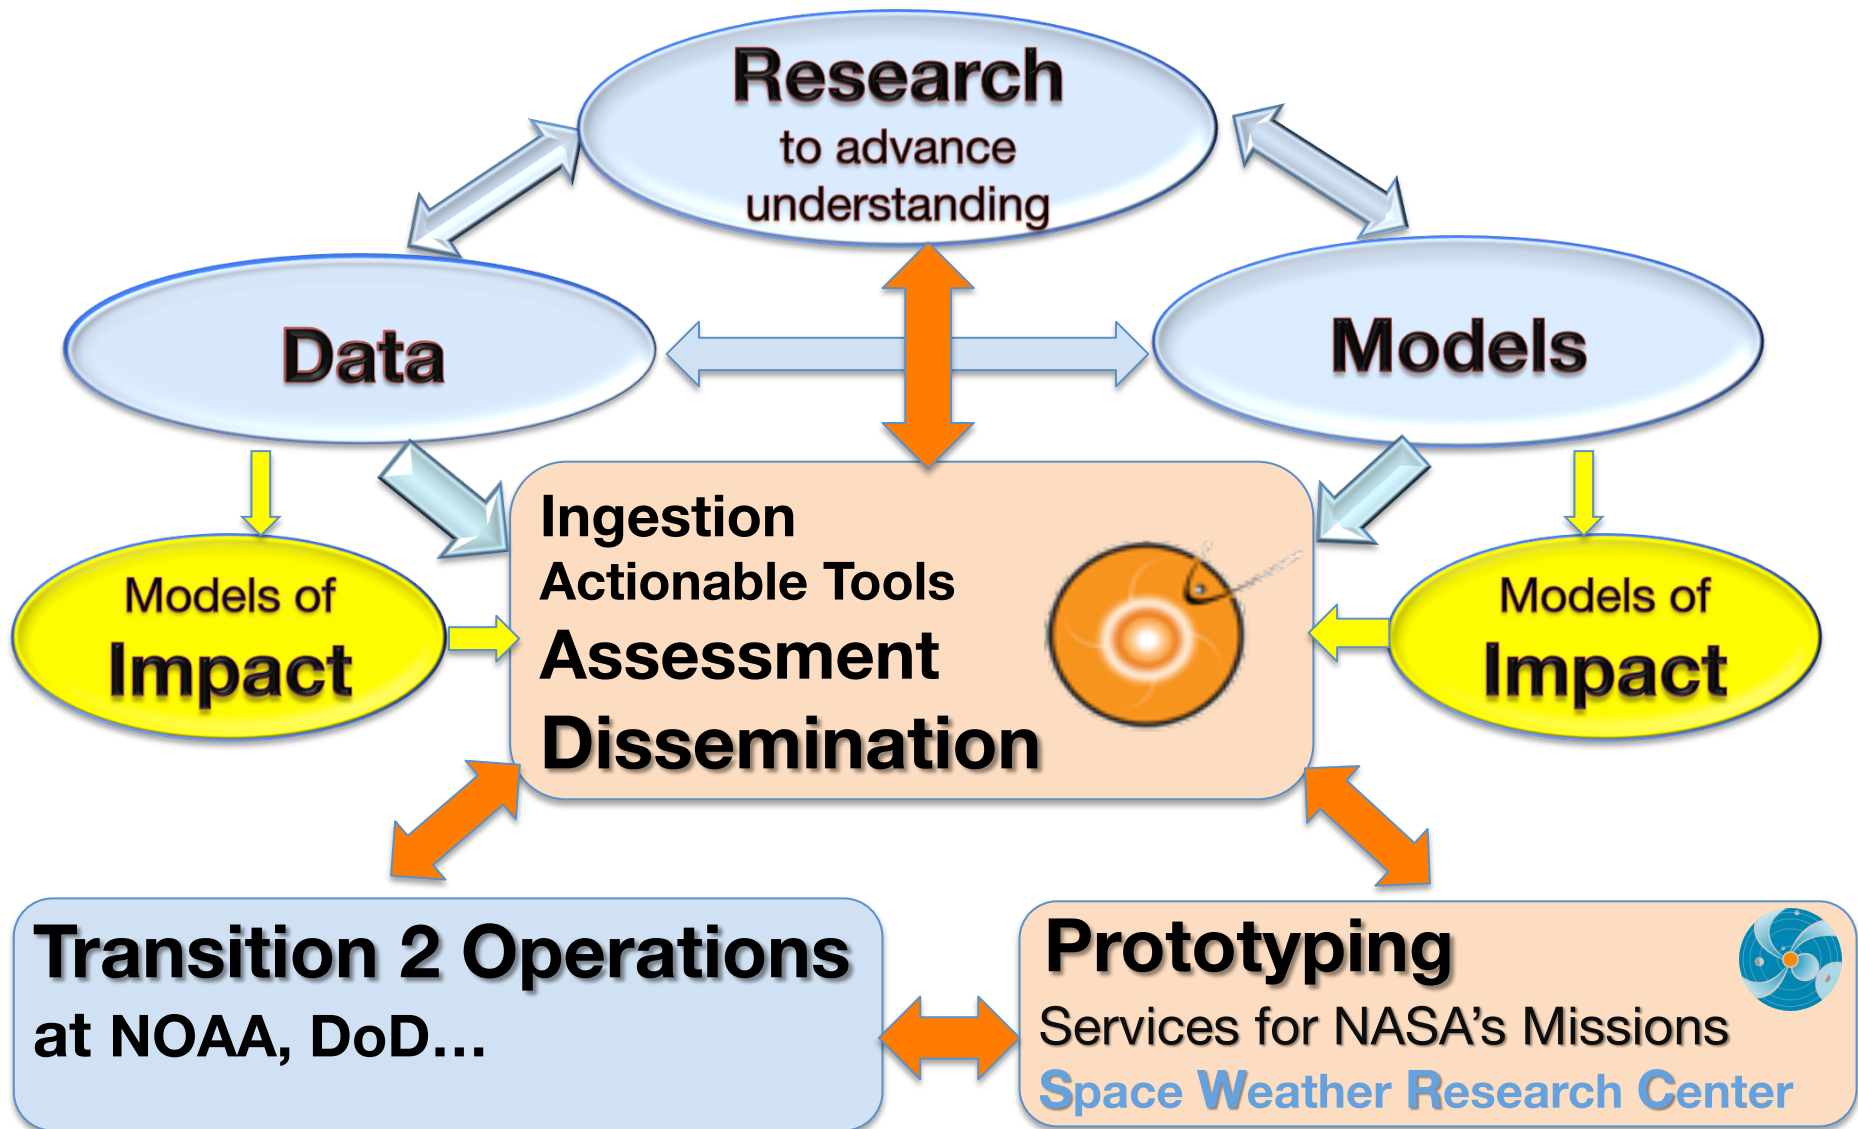

Key Elements of Space Weather Forecasting and Analysis Capability

The CCMC as a Hub for Collaborative Development of Space Weather Predictive Capability System

CCMC Web-Based Signature Services

Runs-on-Request System

An interactive system to serve advanced models to the international research community

- User-configurable input parameters and settings.
- Comprehensive on-line visualization & downloads
- Users advising and custom simulations.

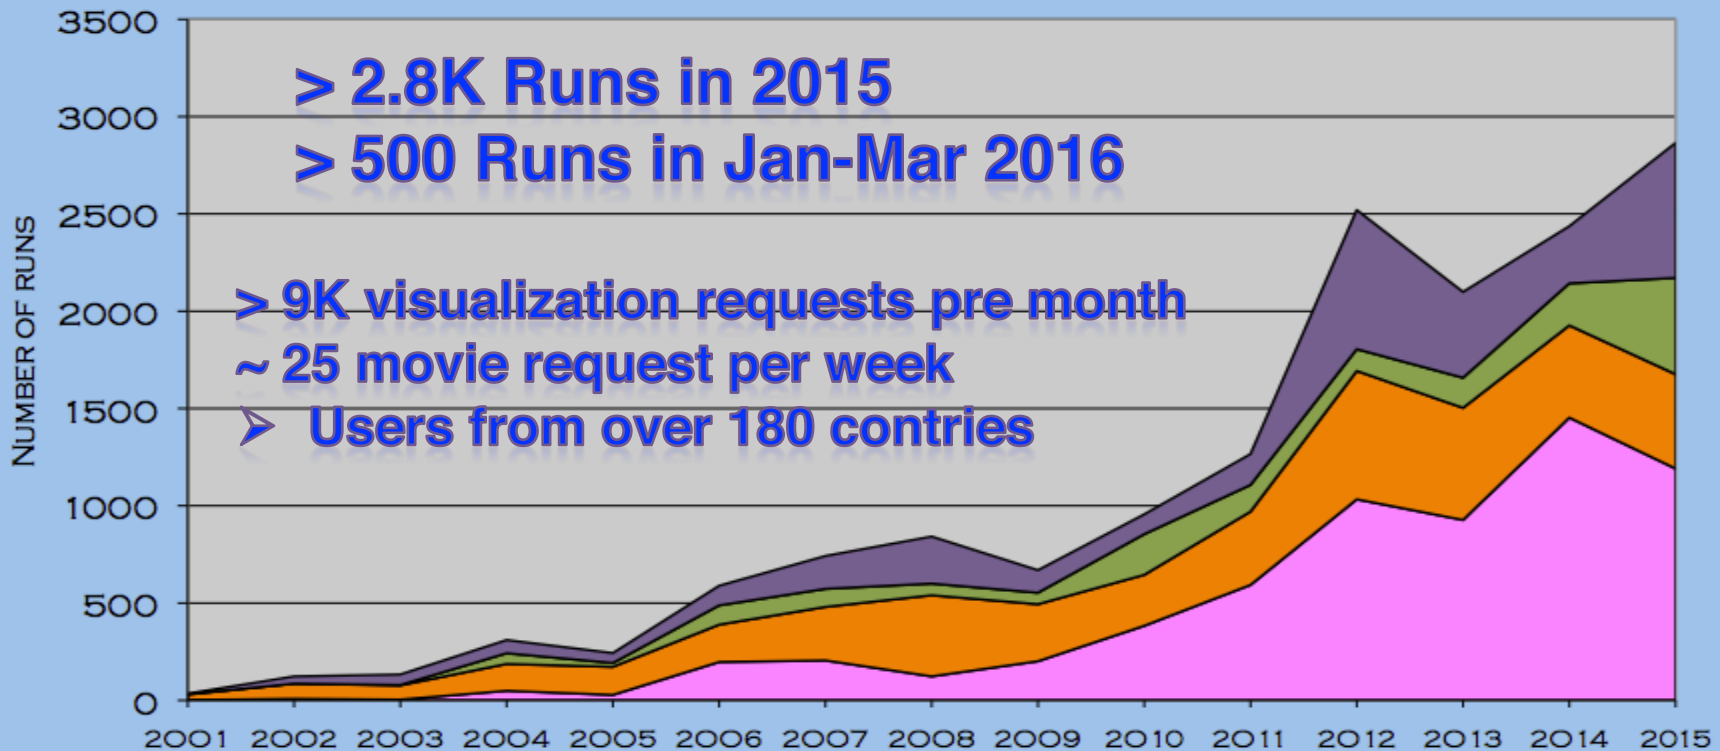

Integrated Space Weather Analysis System

A system for real-time space environment monitoring, event analysis, system science, and education.

- Real-Time & Historical Model + Observational Data
- Actionable Products (Cygnet)
- User Configurable, Interactive Displays
- Web Services

CCMC Statistics: SIMULATION SERVICES

RUNS ON REQUEST - EXECUTED PER YEAR

Last 5 years	SH	GM	IT	IM	Total Runs
2011	593	377	137	159	1266

CCMC: A. Pembroke

Mag-Iono-Coupling Patch-Panel

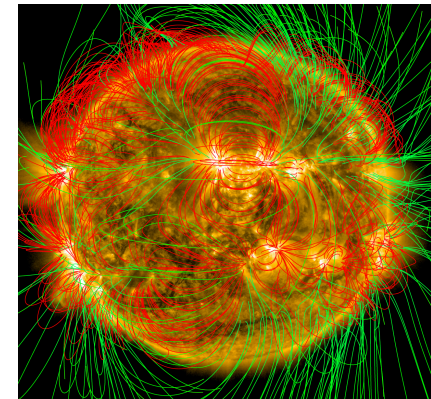

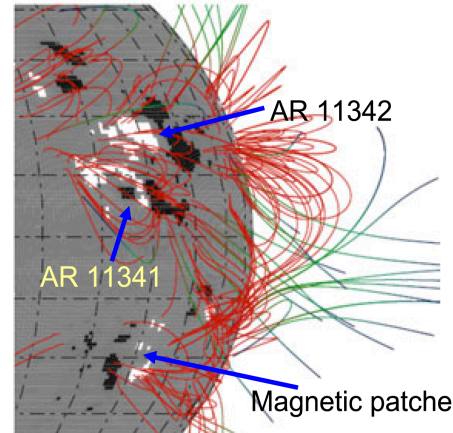

All drivers are converted to a common format.
The tool is called as a KAMELEON subroutine to provide values on the grid;
call kameleon (model, time, mlts, mlats, variables, values_output)

↓
Ionosphere/Thermosphere Models:
CTIPe/TIE-GCM/GITM

Non-Linear Force Free Model

- Designed to study energy and helicity build up in flaring active regions.
- Input SDO/HMI vector magnetograms
- Application of Schuck's COADRED orbital artifact removal algorithm to HMI data
- Cartesian grid version available for use now
 - <http://ccmc.gsfc.nasa.gov/requests/SH/NLFF>
- Spherical & Global Grid versions – soon (June/July)
- Result Visualization (quicklook - now, interactive – soon)

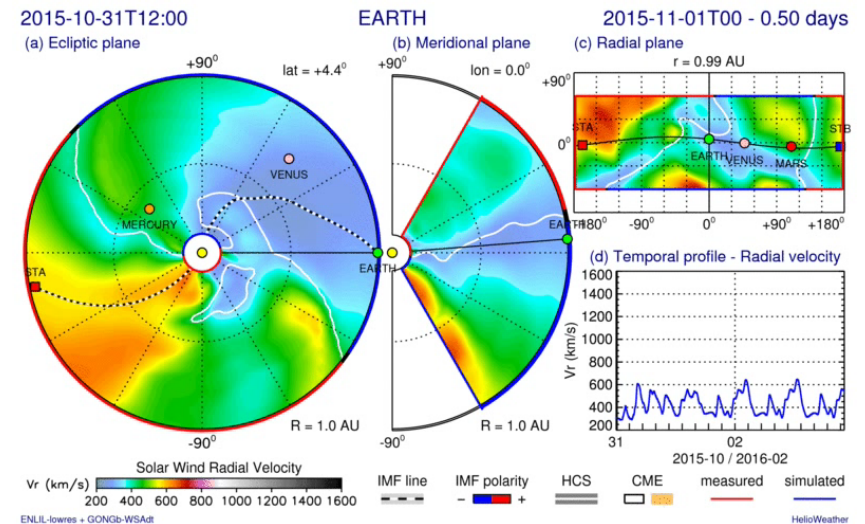

Modelers: T. Asfaw, T. Weigelmann

CCMC: P. Macneice

Towards Time-Dependent Magnetograms

- New approaches to time evolving global photospheric field
 - Approach 1 – Time Interpolating WSA output based on hourly gong synoptic magnetograms - **Odstrcil**
 - Approach 2 – ADAPT (**Arge and Henney**) Time Interpolated Magnetograms

Progress at the CCMC:

WSA-Enlil 2.8f is installed and is offered for RoR

Simulations with time-dependent magnetograms are available for special requests;

Modelers: N. Arge, C. Henney, D. Odstrcil

CCMC: P. Macneice

SWMF CME Modeling from Low Corona

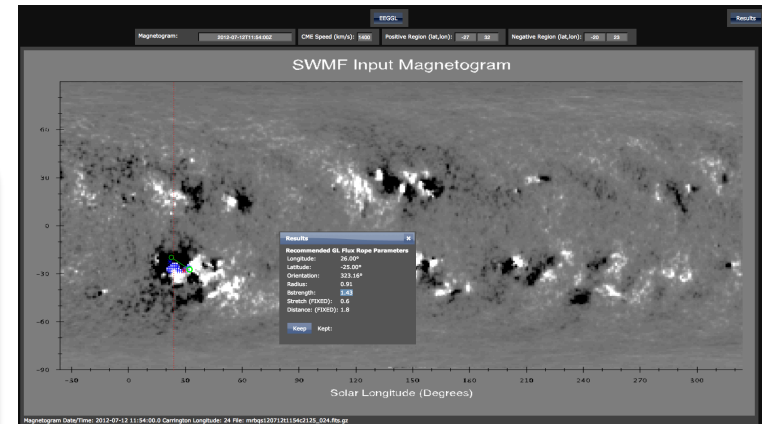

- A new SWMF coronal model incorporates Semi-analytical **Threaded-Field-Line model** for the low solar corona (1 – 1.1 Rs)
- Speed up SWMF coronal simulations on factor of 100
- Uses a closed magnetic flux rope linearly superimposed on the background to initiate CME.

EEGGL Eruption Event Generator (Gibson & Low)

Use synoptic magnetograms to define location and orientation of CME flux rope.

Modeler: I. Sokolov, U. of Michigan

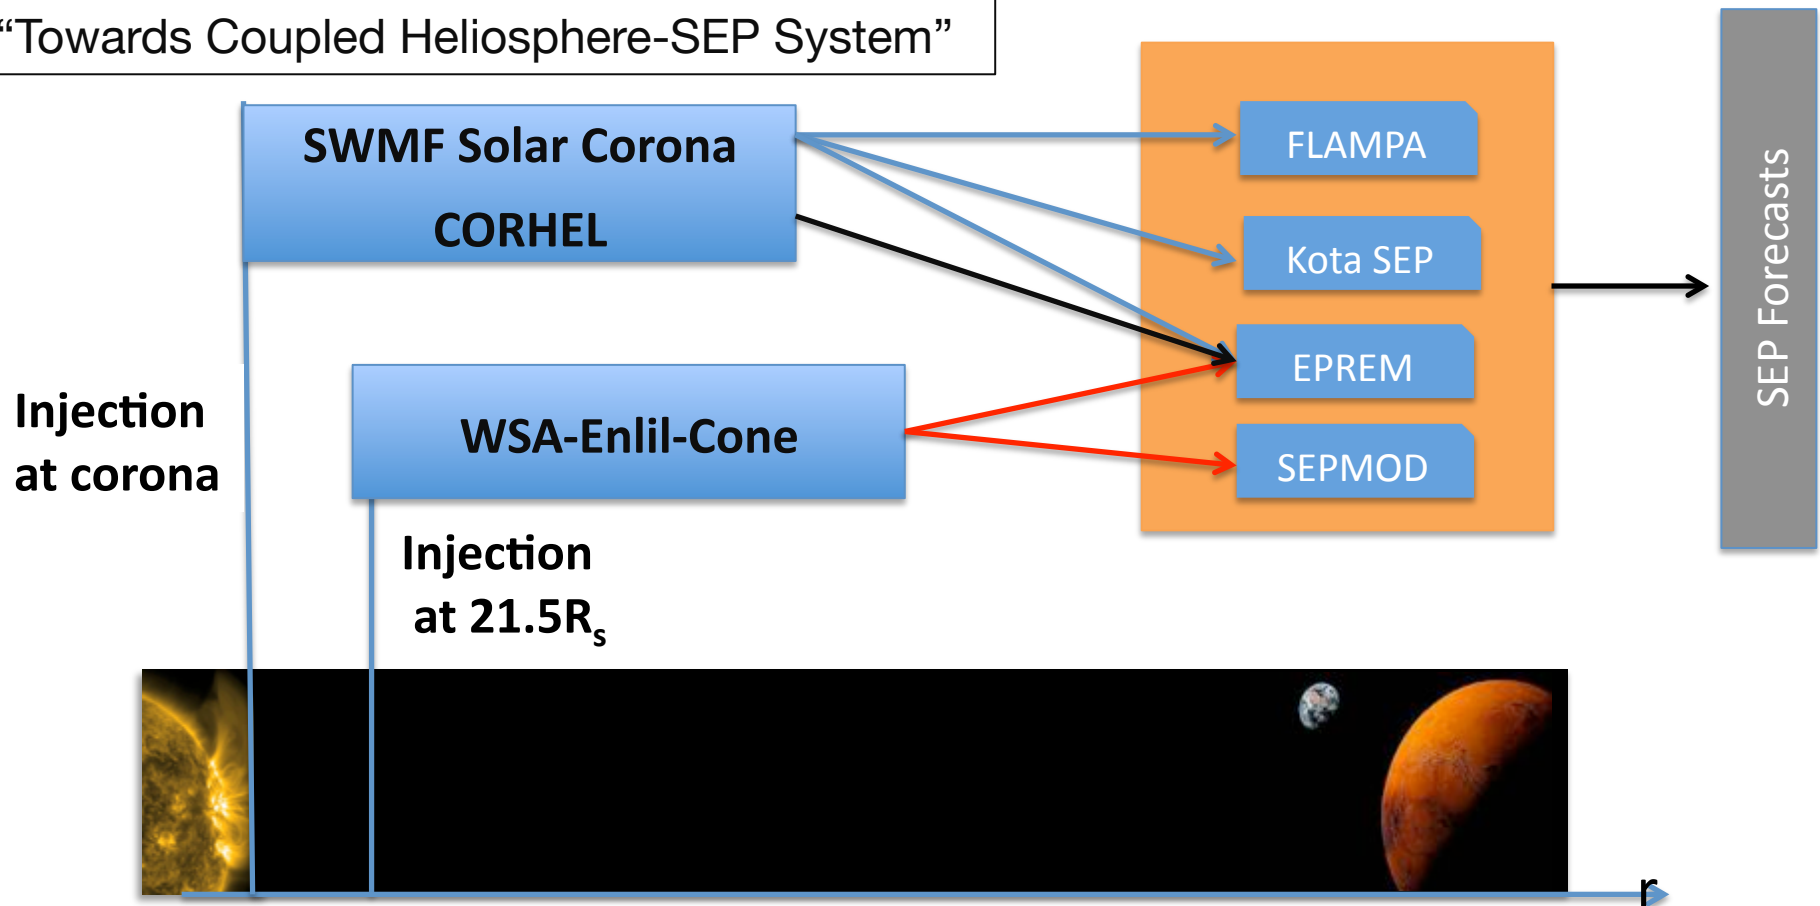

CCMC: A.Taktakishvili, R. Mullinix

Heliosphere-SEP Modeling Patch-Panel

Monday, 5:10 pm: Matt Gorby et al.: “Modeling Particle Acceleration with Coupled MHD and Focused Transport Simulations ”

Thursday, 3:55 pm: Leila Mays et al.:
“Towards Coupled Heliosphere-SEP System”

Modelers: D.Odstrcil, N.Arge, I.Sokolov,
J. Luhmann, N.Schwadron, M. Gorby, J. Linker

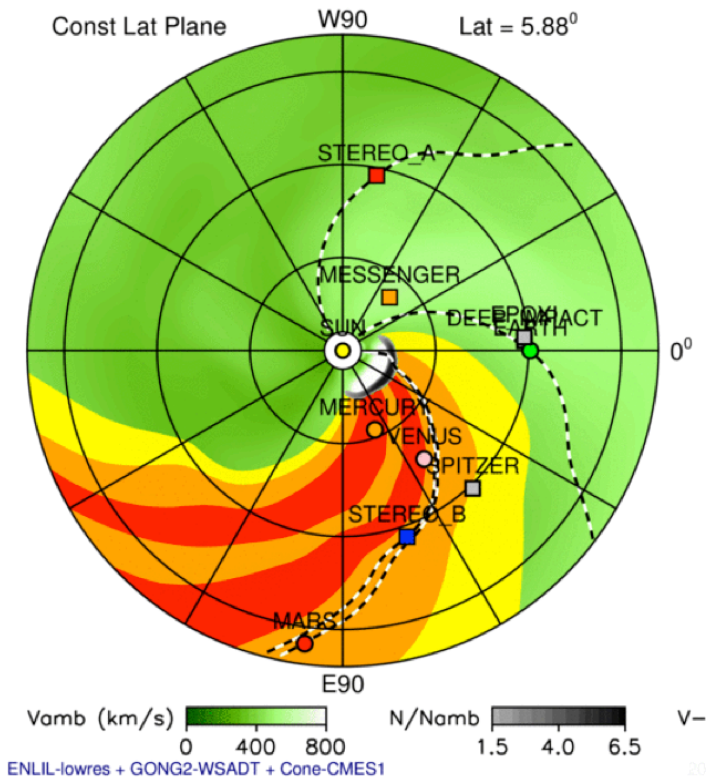

CCMC: P. MacNeice, M.L. Mays

Coupled SEP modeling at the CCMC *WSA-Enlil+SEPMOD*

CCMC is facilitating some first steps to couple WSA-ENLIL with SEPMOD (model developers **D. Odstrcil** and **J. Luhmann**)

2010-08-01T19:00

SEPMOD at STEREO B

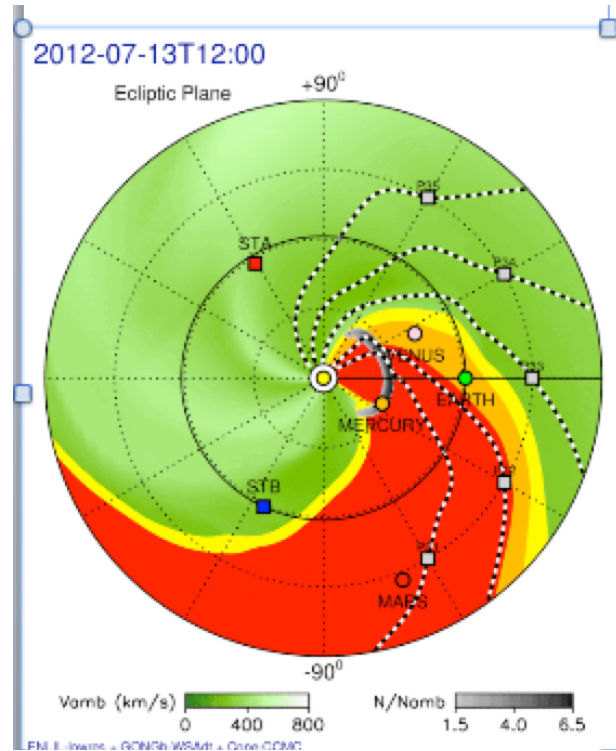

CCMC: P. MacNeice, M.L. Mays

Coupled SEP modeling at the CCMC *WSA+Enlil+EPREM*

CCMC is facilitating some first steps to couple WSA-ENLIL with:

- **EPREM** with model developers **D. Odstrcil**, **N. Schwadron** and **M. Gorby**

Monday, 5:10 pm: Matt Gorby et al.:

“Modeling Particle Acceleration with Coupled MHD and Focused Transport Simulations”

CORHEL Update

- Installed CORHEL V5.0.1
- Running at both CCMC and on PLEIADES

Run	Definition	Nproc	WallClock (HILO)	WallClock (Pleiades)
1	MASP, medium res	60	5 hrs 35mins	4 hrs 22mins
2	MAST, H1 Medium res	60	66hrs 13mins	Run still in progress ?
3	MAST, H2 Medium res	60	88hrs 49mins	66 hrs 15 mins (projected from incomplete run)
3+	MAST, H2 Medium res	240	-	11 hrs 56 mins

Modelers: J. Linker et al.

CCMC: P. Macneice

Global Magnetosphere Post Processing Models

RECONX, A. Gloer (NASA/GSFC)
Separatrix and Null Point Finder

CCMC: A. Pembroke, L. Rastaetter

AMPS: Particle Tracer,
V. Tenishev (U. Michigan)
Monday 5:45 pm:

Single particle position and velocity

X [R_E] Y [R_E] Z [R_E]
 V_x [km/s] V_y [km/s] V_z [km/s]
 Particle Species

Upload file with particle position, velocity and species (X Y Z V_x V_y V_z Species) in each line:

No file selected.

The file size should not exceed 1Mb. Full path name to the particle position input file at your local disk should not contain any blank spaces or quotation marks. On DOS/Windows systems the recommended extension for the input file name is ".txt". Please read the detailed [instructions on particle input file format](#)

Initial particle data should be in GSM for SWMF, SM for LFM and GSE for GUMICS and OpenGGCM model runs to process

Spherical start region.

X_{center} [R_E] Y_{center} [R_E] Z_{center} [R_E]
 Sphere Radius R [R_E]
 Bulk velocity V_x [km/s] (V=sqrt(VX²+VY²+VZ²)<298000) V_y [km/s]
 V_z [km/s]
 Temperature [eV] (<1 MeV)
 Number of particles N (≤ 1000)

Rectangular start region and particle distribution:

X₀ [R_E] Y₀ [R_E] Z₀ [R_E]
 X₁ [R_E] Y₁ [R_E] Z₁ [R_E]
 V_x [km/s] V_y [km/s] V_z [km/s]
 Temperature T [eV] (<1MeV)
 Number of particles N (≤ 1000)

Opportunities for expanding kinetic simulation services at the CCMC

Assessments, Metrics, & Validation

Forecasting Methods ScoreBoards

Testing predictive capability before the event onset.

Examples:

CME Arrival Prediction
Storm onsets
Flare Forecasts
SEP Forecasts

Event-Based M&V to Trace Model Improvement

[2003] 10/27 - 10/30
[2006] 12/13 - 12/16
[2010] 04/04 - 04/07
[2011] 08/05 - 08/07

A list of events.
High quality data.
A library of metrics.
Simulate the same set of events over and over...

Examples:

TEC, Neutral density,
Auroral boundaries,
Ground magnetic perturbations dB/dt

Correlate Impacts with Space Environment Events

Surface Charging

Satellite Drag

Components:

- database of space environment impacts
- database of events & forecasts

Ensemble Forecasting of Space Weather Events Onset

- Collecting and displaying event forecasts from multiple models & different sources in a **Scoreboard**
- Generate experimental international community-wide ensemble forecasts.
- Demonstrate operational potential to users.

Testing Predictive Capabilities Before Event Onset

ScoreBoard Discussion Meeting
Thursday, 5:30 pm

CME Arrival Prediction Scoreboard

- Initiated in 2013
- There are currently **19 registered methods** predicting CME arrival time, including entries from the CCMC, NOAA/SWPC, UK MetOffice, KSWC, SIDC
- Total CMEs in ScoreBoard: **108**

2016: 8 2015: 32 2014: 46 2013 (march start): 22

CME: 2015-06-21T02:48:00-CME-001

Actual Shock Arrival Time: 2015-06-22T17:59Z

Observed Geomagnetic Storm Parameters:

Max Kp: 8.0

Dst min. in nT: -195

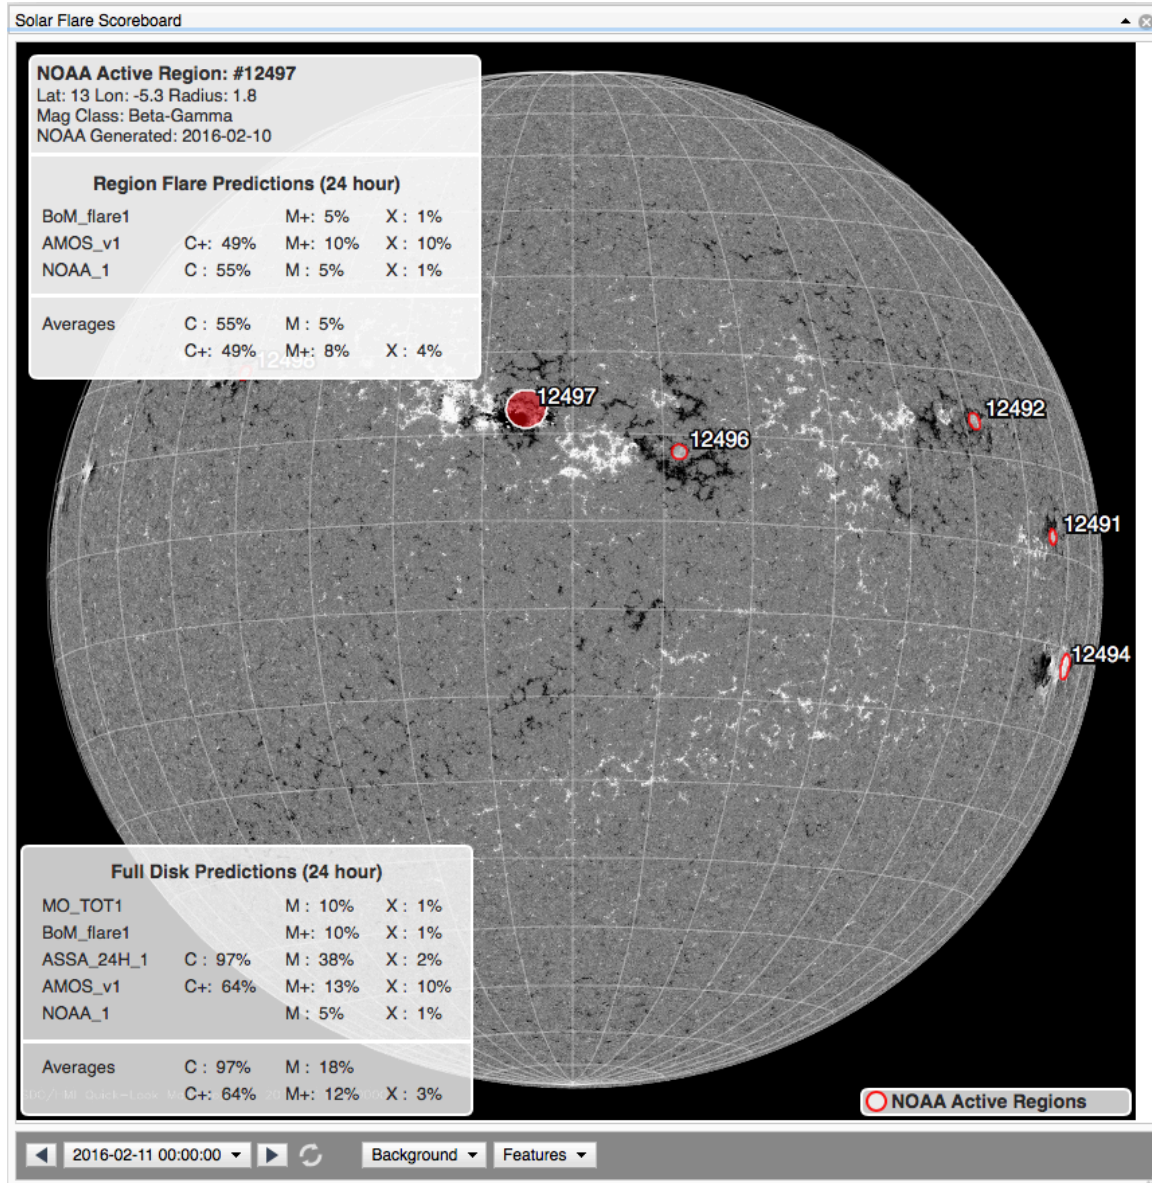

Dst min. time: 2015-06-23T05:00Z

CME Note: From near disk center, AR 12371. Associated with M-class flares.

Predicted Shock Arrival Time	Difference (hrs)	Confidence (%)	Submitted On	Lead Time (hrs)	Predicted Geomagnetic Storm Parameter(s)	Method

2015-06-22T19:48Z	1.82	97.5	---	---	Max Kp Range: 5.5 - 7.8	Average of all Methods

Flare Scoreboard: Ensemble Solar Flare Forecasts

Flare Scoreboard

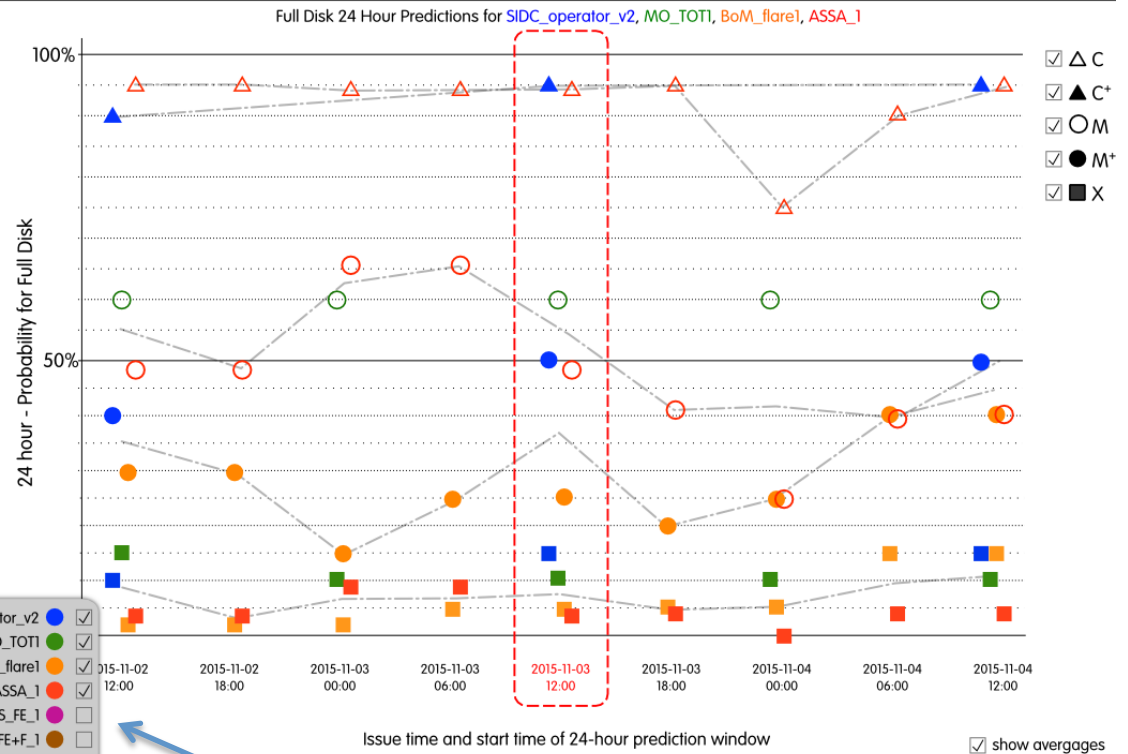

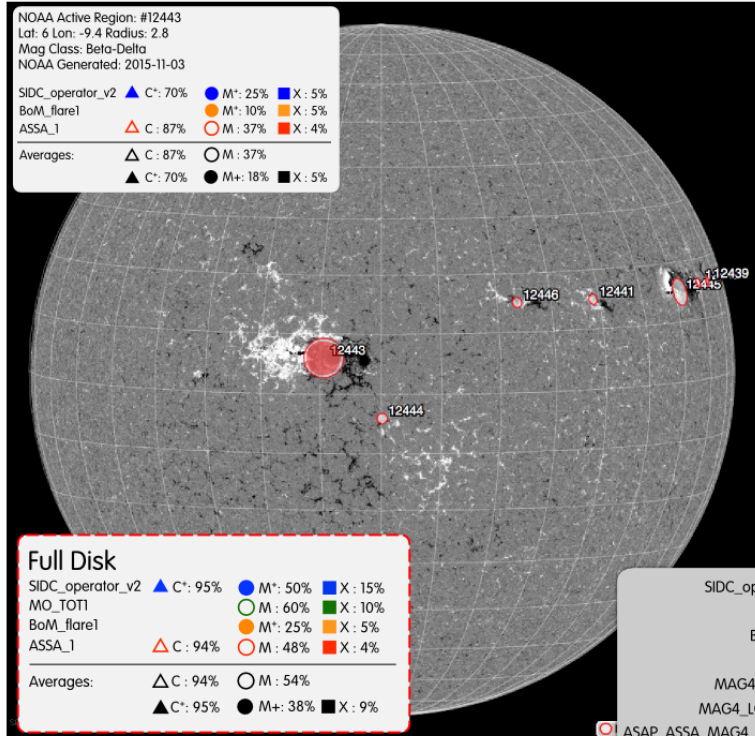

Activity initiated in Nov 2014

Coming soon: <http://ccmc.gsfc.nasa.gov/challenges/flare.php>

Solar Flare Scoreboard

Snapshot for prediction window: 2015-11-03 12:00 - 2015-11-14 12:00 from issue time: 2015-11-03 12:00

issue time: 2015-11-03 12:00 prediction window: 2015-11-03 12:00 + 24 hours models settings Download Data ↓

7 models, more are coming

Royal Observatory of Belgium

Australian Government Bureau of Meteorology

Assessment is a Challenging Research Task

Example of discouraging & misleading Skill Scores

Metric study: Ground magnetic field perturbations

Event: October 29th, 2003 06 00 UT - October 30th, 06 00 UT

Negative Prediction Efficiency (based on RMS): **- 0.2**
(model performance is worse than “no perturbations” benchmark)

Metrics should reflect state-of-the-art and quantify useful information that can be derived from the model

Event-Based M&V Challenges

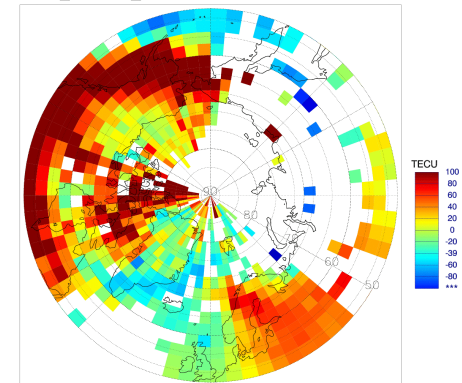

- Community-wide Modeling Challenges.
 - GEM (2008) – Magnetosphere,
 - CEDAR (2009) - Ionosphere
- CCMC facilitates Challenges and serves as a hub for collaborative development:
 - Organize discussion meetings, sessions, workshops.
 - **Develop web interfaces and analysis tools, maintain archives.**

MIT_0002 d_TEC 2013/03/17 12:00:00 UT

MIT_0002 d_TEC 2013/03/17 10:00:00 UT

Connecting Space Environment to Space Weather Impacts: Radiation Effects

❑ NOVICE

- ❑ Radiation effect code for spacecraft and/or component in complex geometries

❑ NAIRAS (Nowcast of Atmospheric Ionizing Radiation System)

- ❑ Models and assesses radiation exposure levels for aviation from GCRs and SEPs

❑ CARI-7

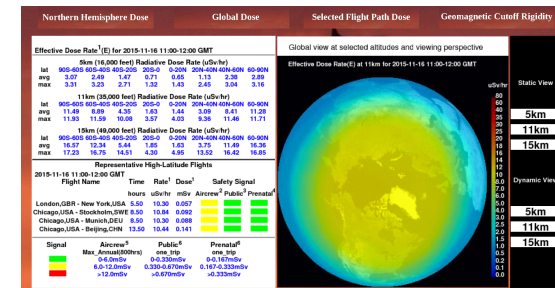

- ❑ Calculates radiation dose from GCRs received by airline passengers/crews

❑ Badhwar-O'Neill (BON) 2014 GCR model

- ❑ Latest Badhwar-O'Neill model of Galactic Cosmic Rays

HST from NOVICE

NAIRAS

Modelers: , M. Xapsos, C. Martens, K.Copeland, P. O'Neill, S. Golge

CCMC: Y.Zheng

CCMC Databases Re-Architecture Models, Simulations and Beyond

Objectives:

- Address a need for a hub for the community to easily search and obtain simulations data for their own research
- Enable easy model-data comparisons
- Enable easy linkage between different CCMC databases (RoR, iSWA, DONKI, ScoreBoard)
- Enable community to build a wide range of tools and front-end applications utilizing simulation data from CCMC

Status:

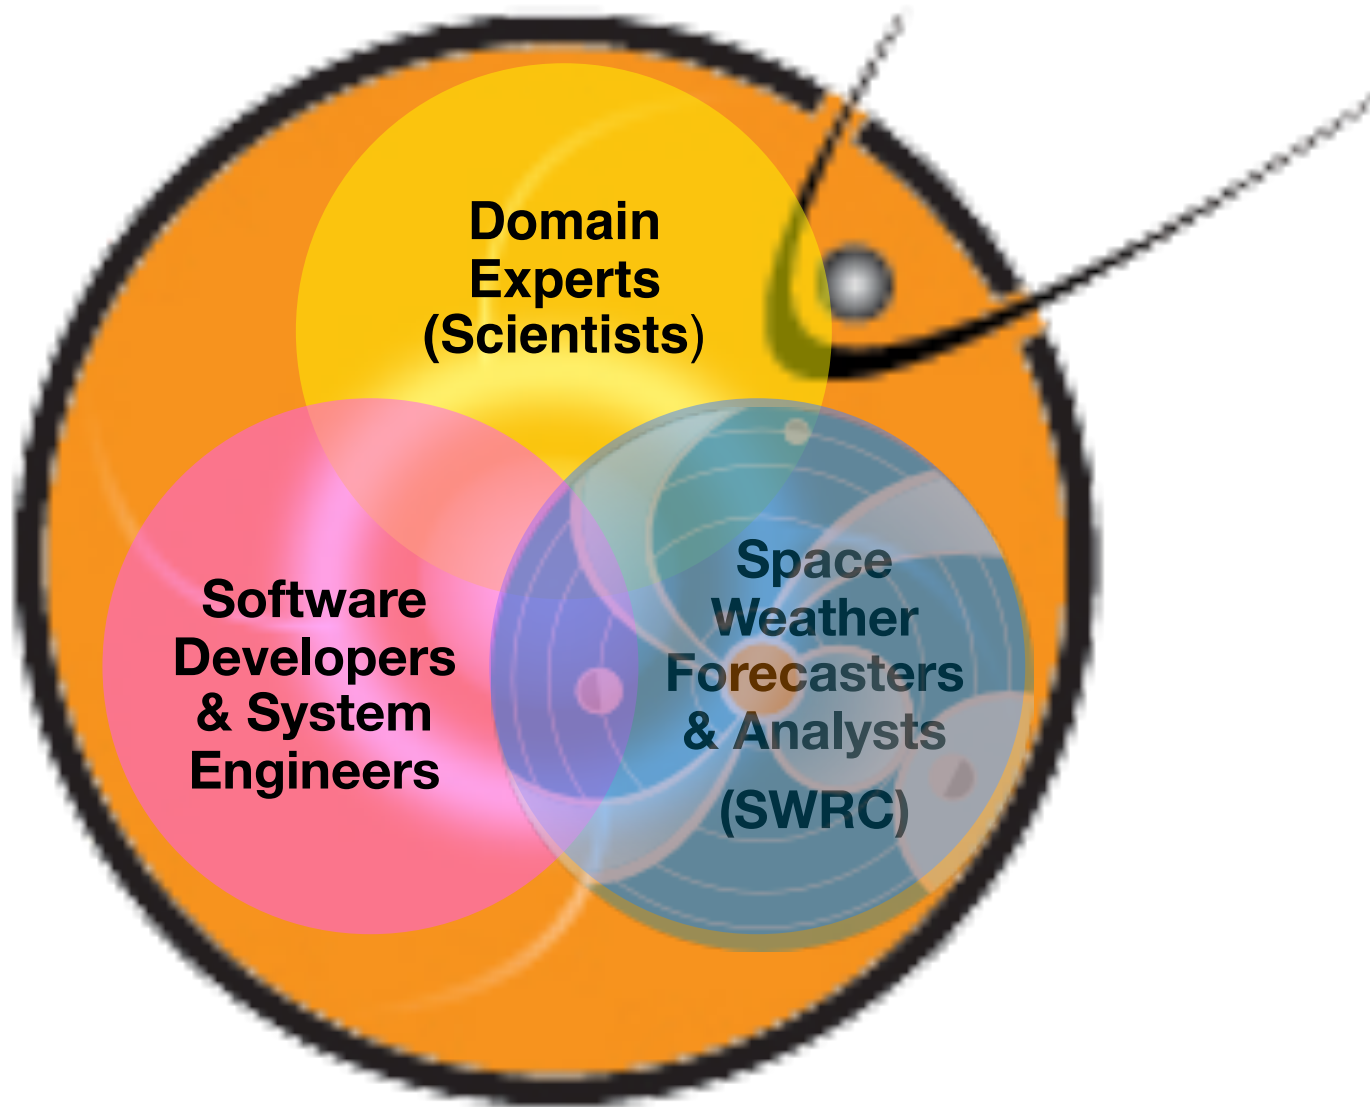

- Database design based on SPASE and IMPEx
- Web interface allowing to enter model information
- Web service interface allowing applications to obtain model information (JSON format)

Friday, 3:20 pm: Chiu Wiegand

Outlook

- CCMC is:
 - Asset of International Space Weather Community.
 - Assess point to state-of-the-art capabilities
 - Fast response unit to emerging community needs.
 - Playground for scientists (facilitate understanding).
 - Hub for collaborative research & development of Space Weather Analysis and Prediction Capabilities.
 - Resource for hands-on education.
- CCMC staff is a part of an expanding CCMC Community

Time unit = 86400. seconds **Relaxation start time relative to rundate (tstart):** -14. time units
Simulation stop time (tstop): 191 time units **Full 3D output cadence (tstep):** 14 time units
Outer Boundary: 2.1 AU (Mars inclusive; **radial span:** 2.0 AU, **region** 2 AU)
Simulation Grid: 1536x140x360 (0.1 to 2.1 AU radius; $\pm 70^\circ$ latitude, 20° to 160° co-latitude; 0° to 360° longitude)
Geometry: Spherical and Uniform **Coordinate System:** HEEQ+180°
Resolution: high **Number of Simulation blocks (nblk):** 1
Ambient wind conditions setting: a6b1mod **ratio of specific heats (gamma):** 1.6666667 **runpar=g53q5**
(**vfast=700.**, **vslow=200.**, **vrfast=25.**, **vrslow=100**, **bfast=300**, **bscl=2**, **dfast=200**, **tfast=2**, **xalpha=0.03**, **nbrad=1**)
Rotation of the inner boundary: synodic

Multipurpose Tools, Systems, Databases, Interfaces

Data Management, Metadata, Standardization, Access

- Science Data Formats, Metadata
- Data Conversion
- Access & Interpolation Library
- Reusable Data Model/Framework

FlexDIT Flexible Data Ingestion Tool

- Designed to facilitate ingestion of disparate time series data from a variety of sources into CCMC's existing infrastructure
- Describe input data via XML for efficient dataset imports
- Generalized parser works with a variety of formats

Integrated Space Weather Analysis System

- Web-Based Space Weather Dissemination System
- User Configurable, Interactive Products
- Web Services
- Real-Time & Historical Model + Observational Data

StereoCAT CME Analysis Tool

- Determine CME kinematic parameters
- Create CME height-time measurements
- Create an ensemble of CME measurements
- Save and share measurement sessions

Database Of Notifications, Knowledge, Information

- Catalog of space weather phenomena
- Knowledgebase of interpretations, simulation results, and forecasting analysis
- Online tool for dissemination of forecasts, notifications, & archiving event-focused information

EEGGL Eruption Event Generator (Gibson & Low)

- Use observations defining the CME source region (location and flux rope orientation,
- Generate Gibson-Low flux rope parameters for the flux rope emergence models.

Space Weather Scoreboard

- Research-based forecasting methods validation
- Scientific community submits forecasts in real-time
- View and Compare all forecasting methods

Space Environment Automated Alerts, Anomaly Analysis Assistant (SEA⁵)

- Mission/Location Specific Space Environment Tool
- Automated/Custom Alerts & Notifications
- Assimilate & Display Anomaly Information

Regional TEC over North American Sector Driven by Ensemble Enlil (Mean RT & Best Fit)

SRPM Irradiance Model

Status at CCMC

- Currently output EUV spectra between 1.8 and 200 nm with 1nm resolution
 - Most variable part of spectrum
- Posted at ISWA daily
 - iswa.gsfc.nasa.gov/iswa/iSWA.html
- Will extend to full spectrum in early 2016.
- Long term goals
 - Solar
 - ROR use – user supplied masks, customized resolution runs, archival runs etc
 - Stellar
 - Build ROR-like facility to generate irradiance spectra for use in modeling exoplanet atmospheres
 - Initially for solar like stars only
 - Later to support user modification to $\rho(r)$, $T(r)$ profiles of different feature types

Regional TEC over North American Sector

CTIPe driven by Enlil Cone Model

Ensemble Forecasts

low lat ($0^\circ < \text{lat} < 25^\circ$)

middle lat ($25^\circ < \text{lat} < 50^\circ$)

a

high lat ($50^\circ < \text{lat}$)

- MIT GPS VTEC
- CTIPe w/ Weimer
- CTIPe w/ ENLIL (90°)
- CTIPe w/ ENLIL (135°)
- CTIPe w/ ENLIL (180°)

***IMF orientation
