

CCMC Validation and R2O transition tools: ISWA, CAMEL and Scoreboards

M. Leila Mays, Joycelyn Jones & CCMC Team

9 June 2022

CCMC Workshop 2022

Validation at CCMC: Evaluating Model Performance

- Benchmarks current model performance. Traces progress over time.
- Validation to improve scientific understanding
 - Science-based metrics
 - CCMC leadership in community challenges/campaigns at GEM, CEDAR, SHINE, ISWAT
- Validation to determine R2O transition suitability
 - Operationally relevant metrics to test forecast value
 - CCMC validation collaborations with SWPC (ENLIL, SWMF, WSA, ADAPT)
- What to validate: focus on Essential Space Environment Quantities (ESEQs)
 - Linked to impacts or passed between domains
 - Derived from observational data and model outputs
 - Track the metrics of the ESEQs over time.
 - Use ESEQs to create benchmarks, multi-model comparisons, scorecards.

Modes:

- Historical validation of historical model runs
- Historical validation of real-time forecasts (CCMC community scoreboards)
- Simulated (as-if) real-time forecast validation
- Real-time forecast validation

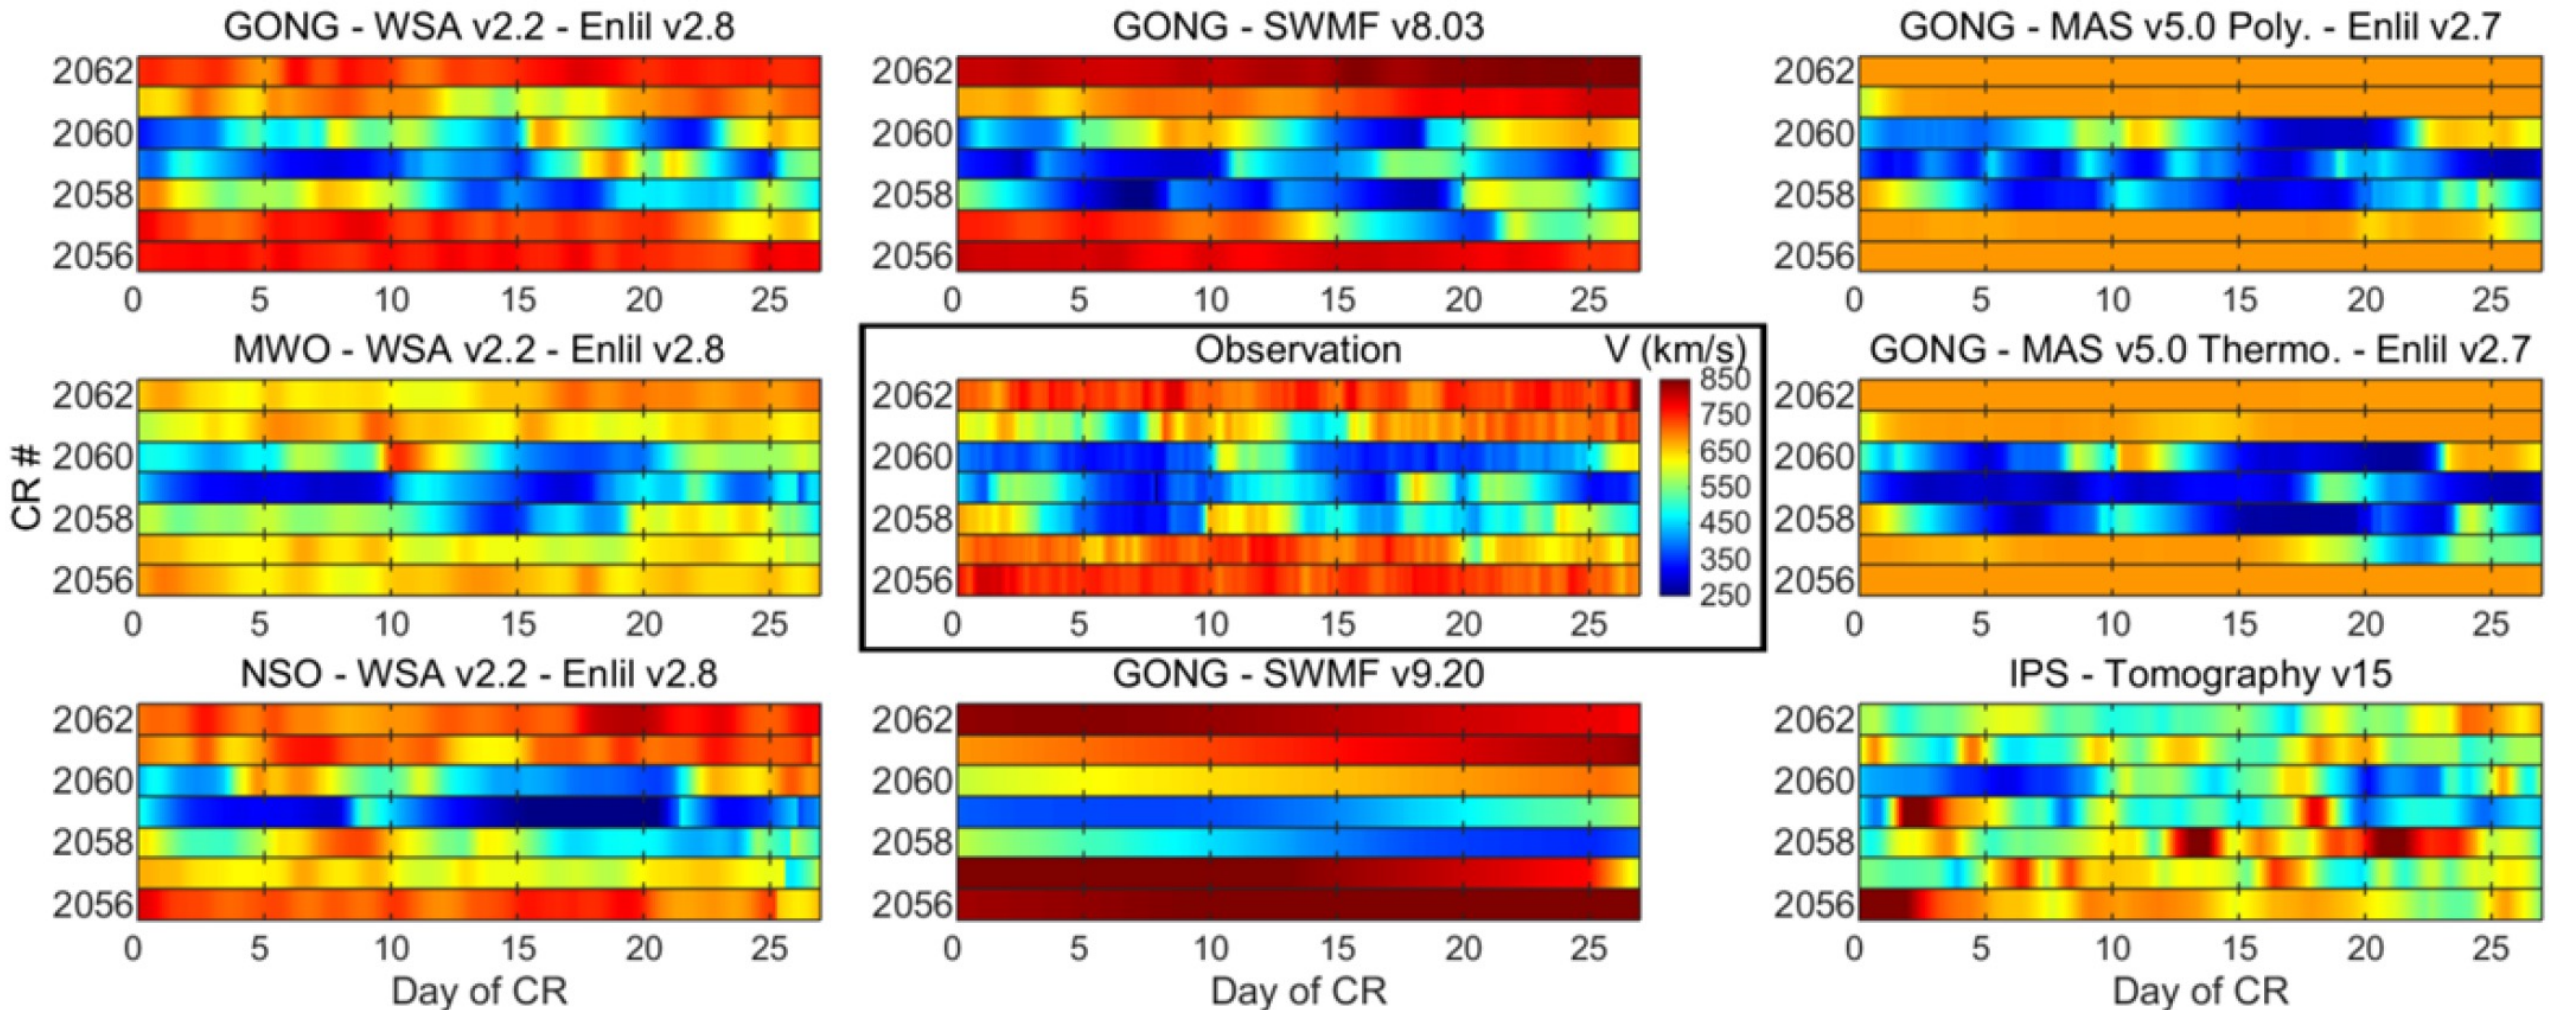

Validation: Important Elements

- **Community involvement** and coordination, including operations
 - Community agreement on metrics selection and validation approach
 - Community definition of Essential Space Environment Quantities
 - COSPAR ISWAT teams
- Preparation of **observations** and their uncertainties
 - Involving data experts on validation teams
 - Some observations are actually techniques/models themselves
- Care **in comparing** models
 - Validation studies with different designs cannot be directly compared
- Transparency and collaboration in validation studies
 - Providing data and necessary details – how were forecasts were constructed? How was validation performed?
 - CCMC CAMEL tool

Example: Validation Study using CCMC Runs-on-Request

Jian et al. (2015) *Space Weather: solar wind speed at Ulysses*

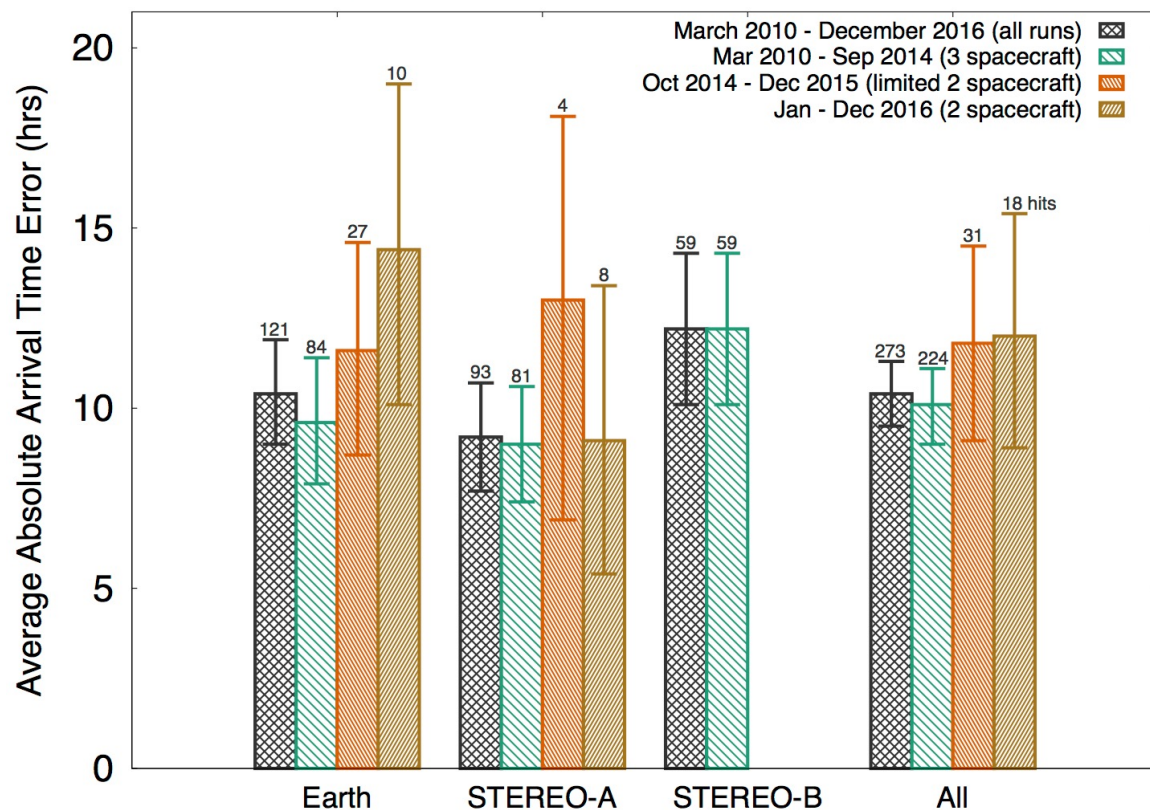

Examples: Validation Studies of CME Arrival Time Error using:

CCMC Real-Time Runs

Wold et al. (2018) *JSWSC*, for WSA-ENLIL+Cone:

- 10.4 ± 0.9 hours error
- 1.7 hour error increase with single coronagraph

Average Absolute Error at Earth, STEREO A & B

CCMC Scoreboards

Riley et al. (2018) *Space Weather*:

- First comprehensive analysis of CME scoreboard data
- 13 hours error (scoreboard average)
- ± 20 hours standard deviation

Coordinated Community Effort:

International Forum on Space Weather Capabilities Assessment

SOLAR

CCMC facilitator(s): P. Macneice

- **Solar Flare Prediction** (Leads: S. Murray, M. Georgoulis, S. Bloomfield, K.D. Leka
Scoreboard Leads: S. Murray, M.L Mays) SSA-0,SSA-6
- **Coronal & Solar Wind Structure**
Coronal & SW Structure; Ambient SW; Coronal Hole Boundaries
(Leads: P. Macneice, L. Jian) SSA-7
- **3D CME kinematics and topology** (Leads: B.Thompson, C.Moestl, D.Barnes)
- **Solar Indices and Irradiance** (Leads: J. Klenzing, C. Henney, K. Muglach) SSA-0

GEOSPACE: Geomagnetic Environment

CCMC facilitator(s): L.Rastaetter

- **Ground Magnetic Perturbations: dBdt, delta-B, GICs, FACs**
(Leads: D. Welling, H. Opgenoorth, C. Ngwira) SSA-1
- **Geomagnetic Indices** (Leads: M. Liemohn) SSA-1
- **Magnetopause location and geosync. orbit crossing**
(Leads: Y. Collado-Vega, S. Merkin) SSA-1

HELIOSPHERE

CCMC facilitator(s): M.L. Mays, A. Taktakishvili, P. Macneice

- **CME Arrival Time** (Leads: C. Verbeke, M.L. Mays, A. Taktakishvili) SSA-1
- **IMF Bz at L1** (Leads: N. Savani, P. Riley) SSA-1
- **SEPs** (Leads: I.G. Richardson, P. Quinn, M. Marsh, M.L. Mays
Scoreboard Leads: M. Dierckxsens, M. Marsh) SSA-3,SSA-6

GEOSPACE: Auroral Region

CCMC facilitator(s): M.Kuznetsova

- **Auroral precipitation and high latitude ionospheric perturbations**
(Leads: R. Robinson, Y. Zhang, B. Kosar)

RADIATION and PLASMA EFFECTS Scope of work

CCMC facilitator(s): Y. Zheng, M. Kuznetsova

- **Surface Charging** *few eV - keV electrons, plasma density*
(Leads: J. Minow, D. Pitchford, N. Ganushkina) SSA-6
- **Internal Charging** *keV-MeV electrons*
(Leads: P. O'Brien, Y. Shprits) SSA-6
- **Single Event Effects** *MeV-GeV-TeV protons, ions*
(Leads: M. Xapsos, J. Mazur, P. Jiggins) SSA-3,SSA-6
- **Total Ionizing Dose** *keV-MeV electrons, keV-GeV protons,ions*
(Leads: I. Jun, T. Guild, M. Xapsos) SSA-6
- **Radiation effects for aviation** (Leads: K. Tobiska, M. Meier) SSA-6

IONOSPHERE

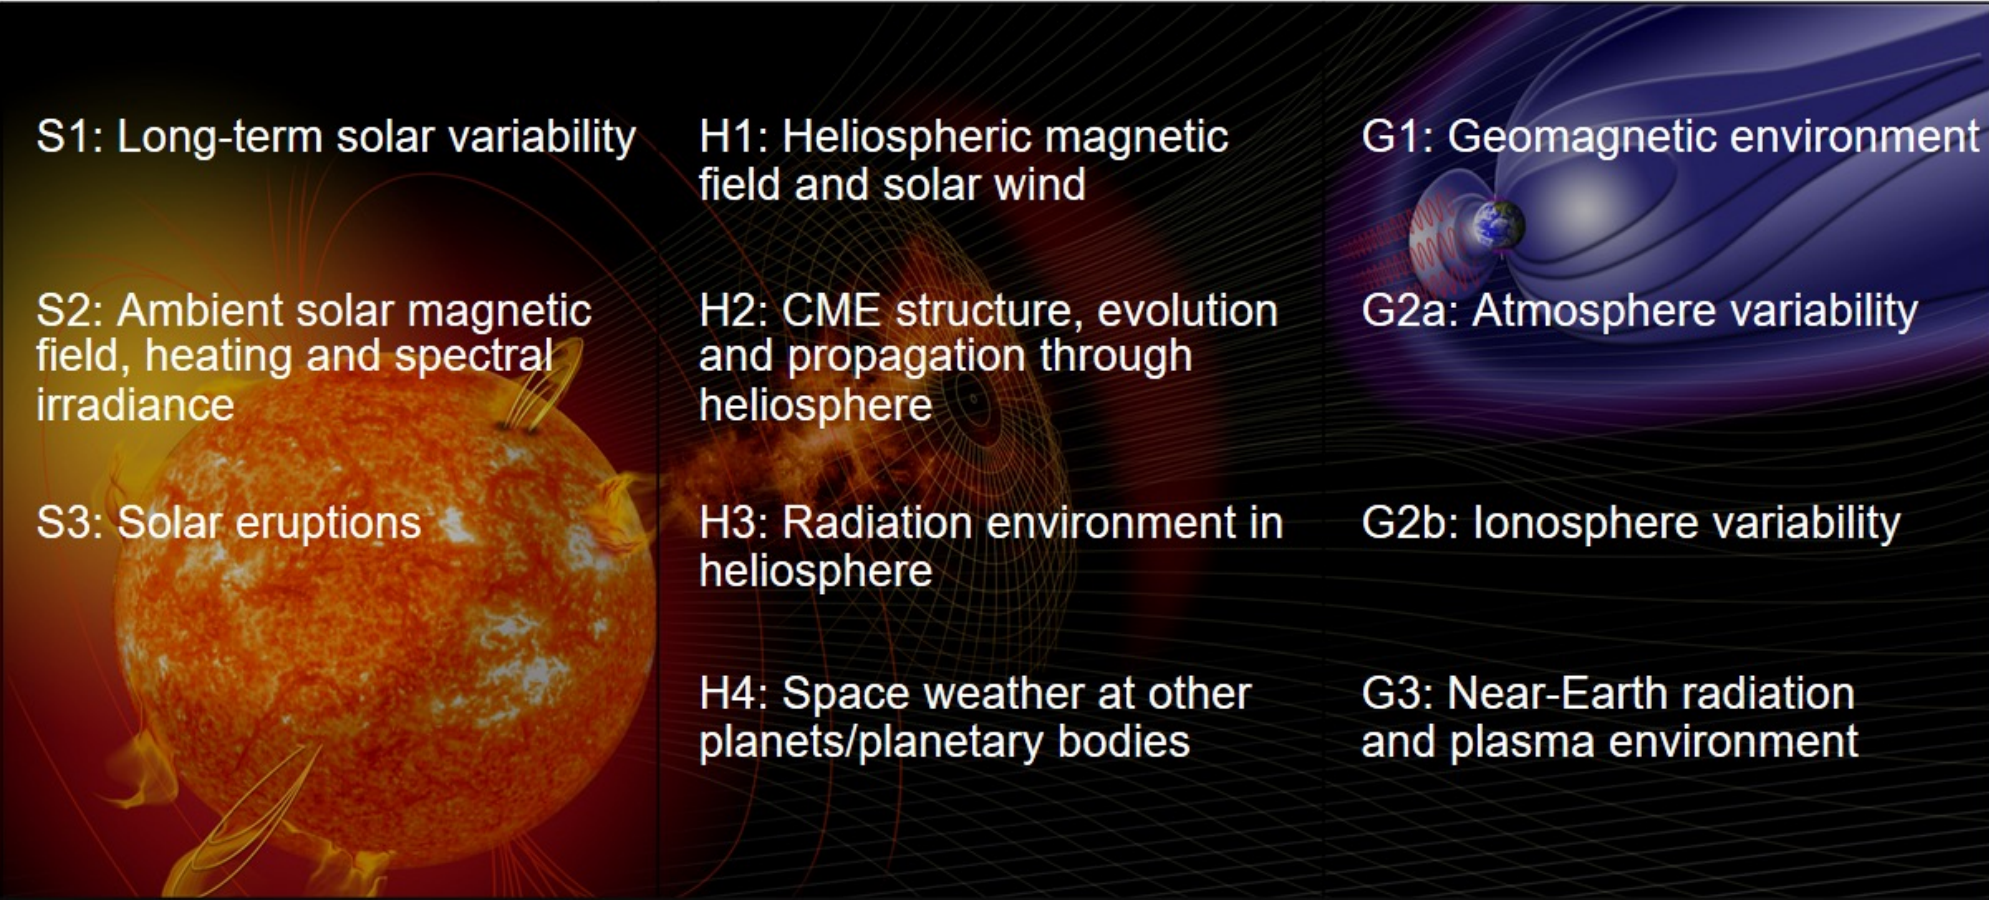

CCMC facilitator(s): J. Shim, M. Kuznetsova

- **Neutral Density and Orbit Determination at LEO**
(Leads: S. Solomon, T. Fuller-Rowell, S. Bruinsma, E. Sutton) SSA-2
- **Global & Regional TEC** (Leads: L. Scherliess, R. Calfas) SSA-4
- **Ionosphere Plasma Density: NmF2/foF2, hmF2, TEC**
(Leads: I. Tsagouri, M. Angling, J. Shim) SSA-5
- **Ionosphere Scintillation** (Leads: E. Yizengaw) SSA-5

Forum working teams focused on different evaluation topics.

Cross-team interactions.

The COSPAR ISWAT initiative is a global hub for collaborations addressing challenges across the field of space weather.

S: Space weather origins at the Sun	H: Heliosphere variability	G: Coupled geospace system	Impacts
 <p>S1: Long-term solar variability</p> <p>S2: Ambient solar magnetic field, heating and spectral irradiance</p> <p>S3: Solar eruptions</p>	<p>H1: Heliospheric magnetic field and solar wind</p> <p>H2: CME structure, evolution and propagation through heliosphere</p> <p>H3: Radiation environment in heliosphere</p> <p>H4: Space weather at other planets/planetary bodies</p>	<p>G1: Geomagnetic environment</p> <p>G2a: Atmosphere variability</p> <p>G2b: Ionosphere variability</p> <p>G3: Near-Earth radiation and plasma environment</p>	<p>Climate</p> <p>Electric power systems/GICs</p> <p>Satellite/debris drag</p> <p>Navigation/Communications</p> <p>(Aero)space assets functions</p> <p>Human Exploration</p>
<p>Overarching Activities: Assessment Information Architecture Data Utilization Education/Outreach</p>			

Each Cluster has at least one team on predictive capabilities assessment with CCMC involvement

Game-Changing Partnerships

Utilizing Shared Proving Grounds

- **NASA/CCMC-NOAA/SWPC on R2O2R transition pipeline**
 - Utilized shared cloud environment to promote secure and convenient collaboration between operational and research teams.
 - Initially set up to mirror the operational environment as closely as possible.
 - Ongoing project: Implementation and Evaluation of Modeling Suite for ICAO
 - Bi-weekly tag-ups
- **NASA CCMC-SRAG on Integrated Solar Energetic Proton (ISEP) project**
 - Identify and evaluate new models
 - Develop tailored ISEP Alert/Warning Scoreboard Software
 - Implement these capabilities within CCMC as a non-operational prototype
 - Transition capabilities to M2M office for prototyping by M2M analysts and support of NASA SRAG (NASA in-house R2O2R pipeline)
 - CCMC and SRAG work as one team, weekly tag-ups, coordinated hiring

T. Tsui, C. Didigu

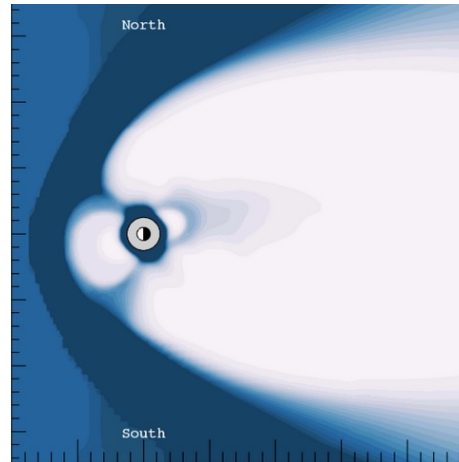

L. Mays, J. Jones

CCMC & NOAA SWPC Collaborations

- 20-year partnership since CCMC establishment.

Major successes:

- Demonstrated potential of Enlil for operational forecasting (2006 - 2009)
- Geospace model transition to operations at NOAA/SWPC (2013 - 2015)
- NASA-NOAA space weather MOU on space weather modeling capabilities: MOU Annex to validate model upgrades (2017 - 2020)

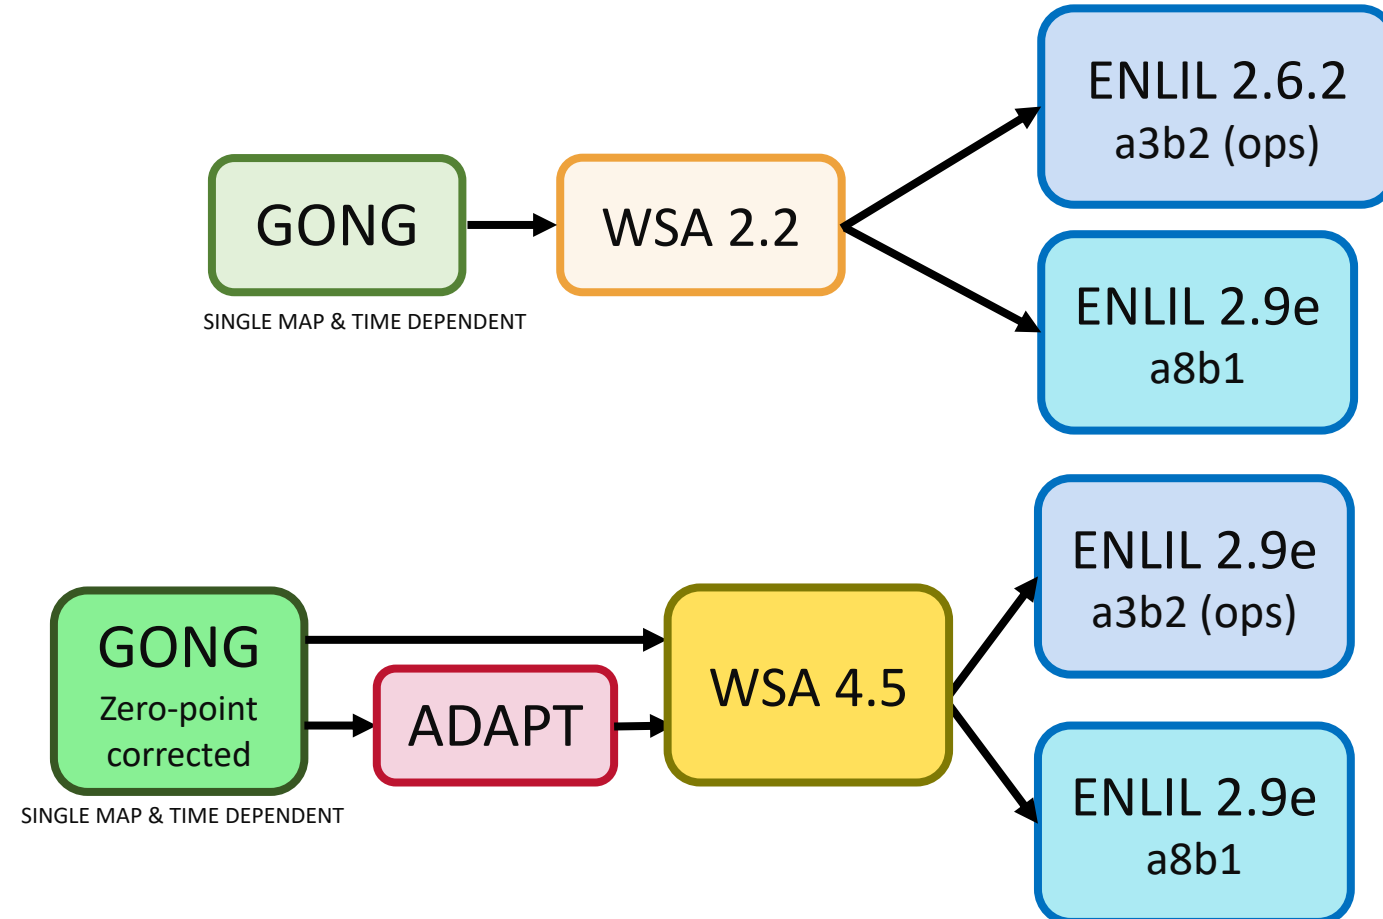

NOAA SWPC / CCMC MOU Annex CME Arrival Time

- Tested if **model upgrades** improve CME arrival time prediction
- CCMC performed and analyzed over **1200 simulations**
- **Result:** ADAPT and time-dependent driven simulations **decrease CME arrival times errors by 6 hours** for GONG zero-point corrected inputs.
- Final report was delivered in **May 2020**

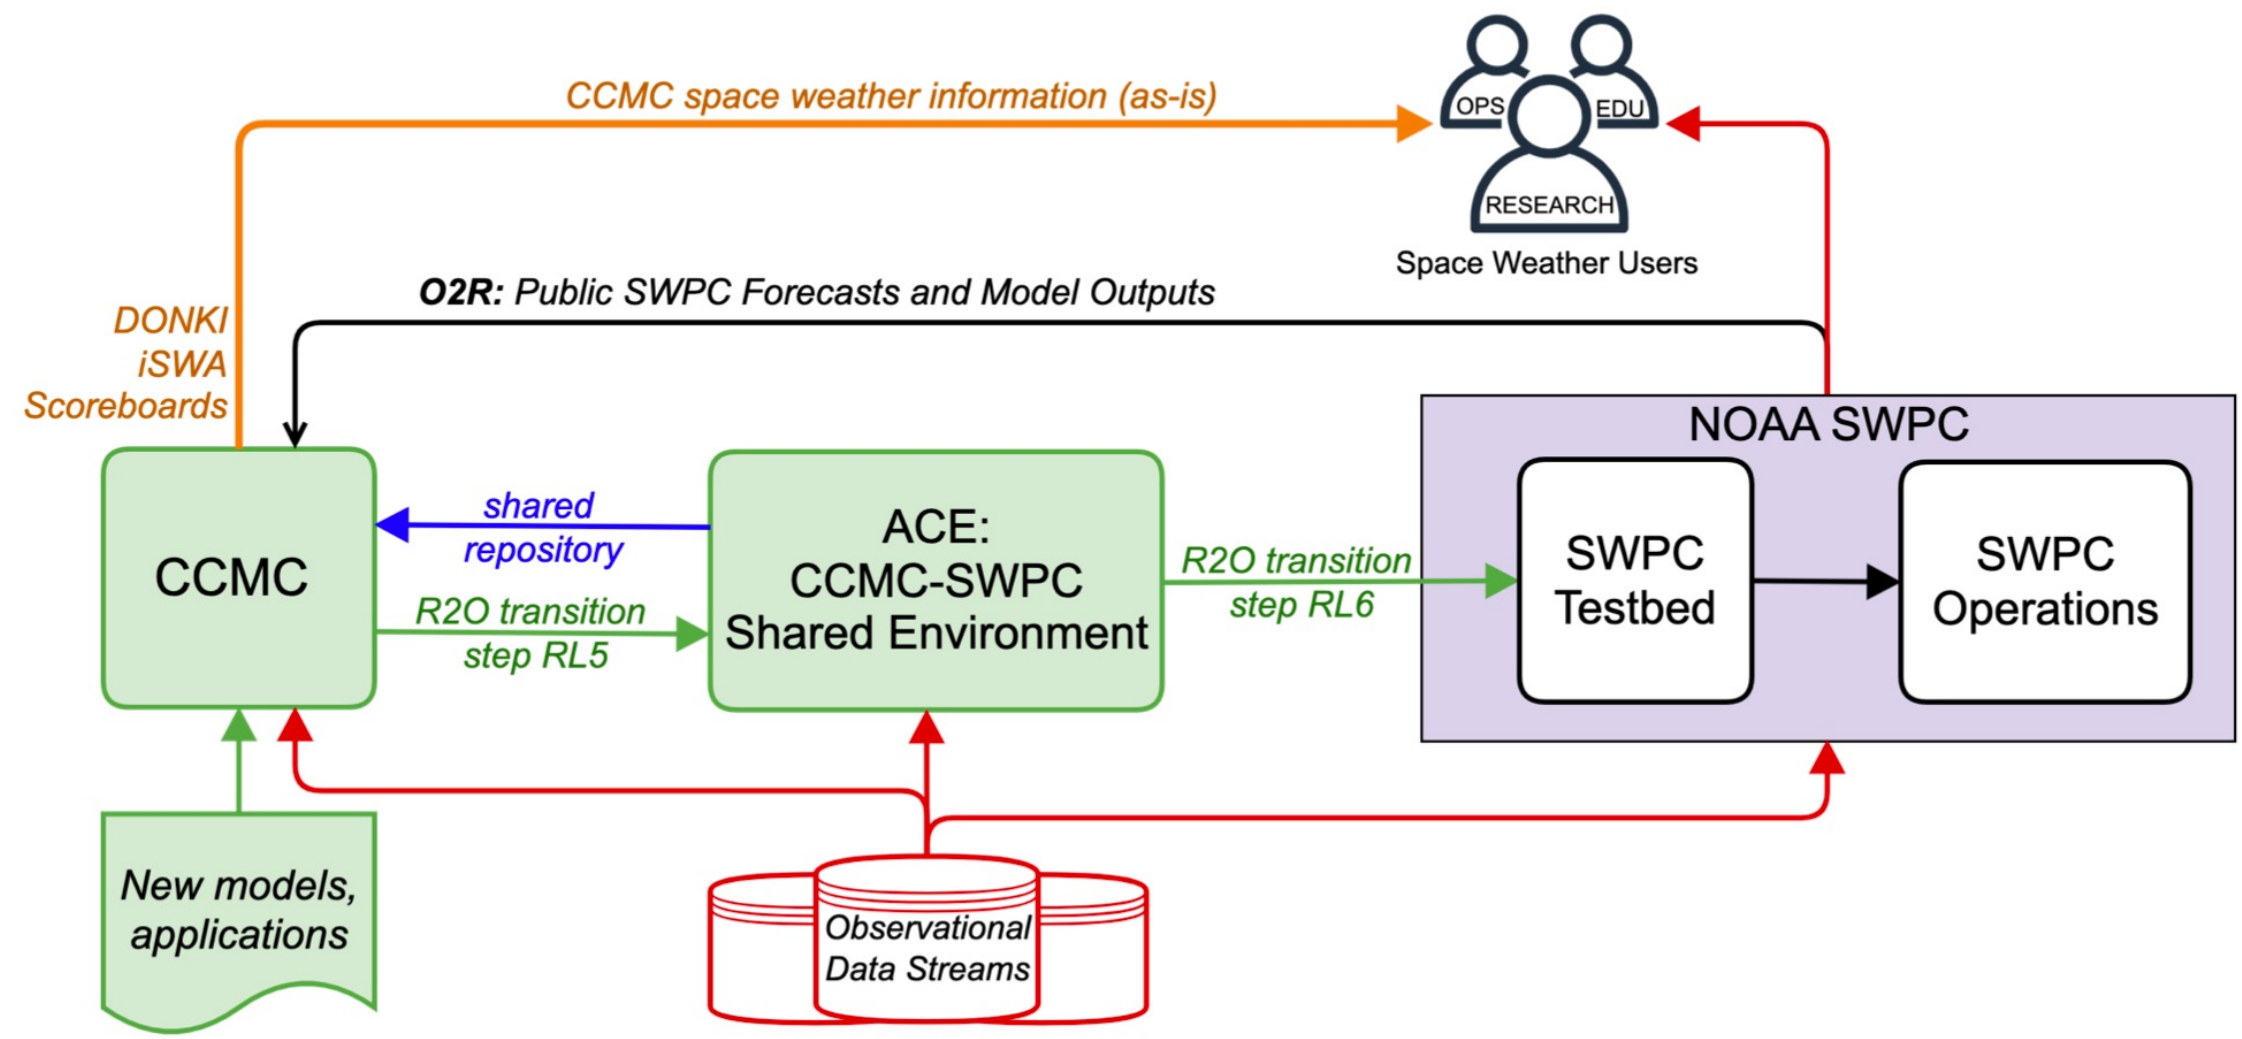

CCMC performed over 1200 simulation variations:

<https://ccmc.gsfc.nasa.gov/annex/>

CCMC-SWPC R2O2R Pipeline

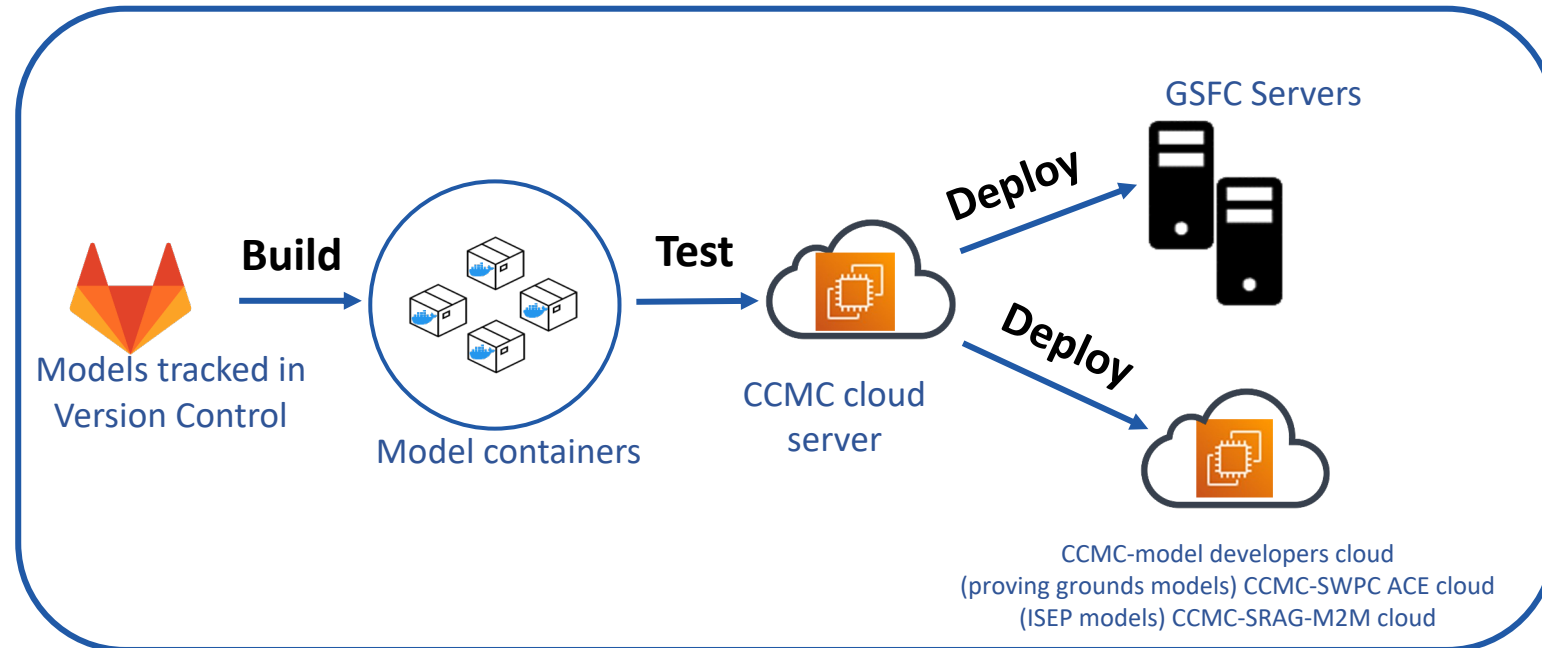

Research to Operations (R2O) at CCMC: Real-Time Model onboarding and synchronization

Real-time/Continuous Run Model onboarding:

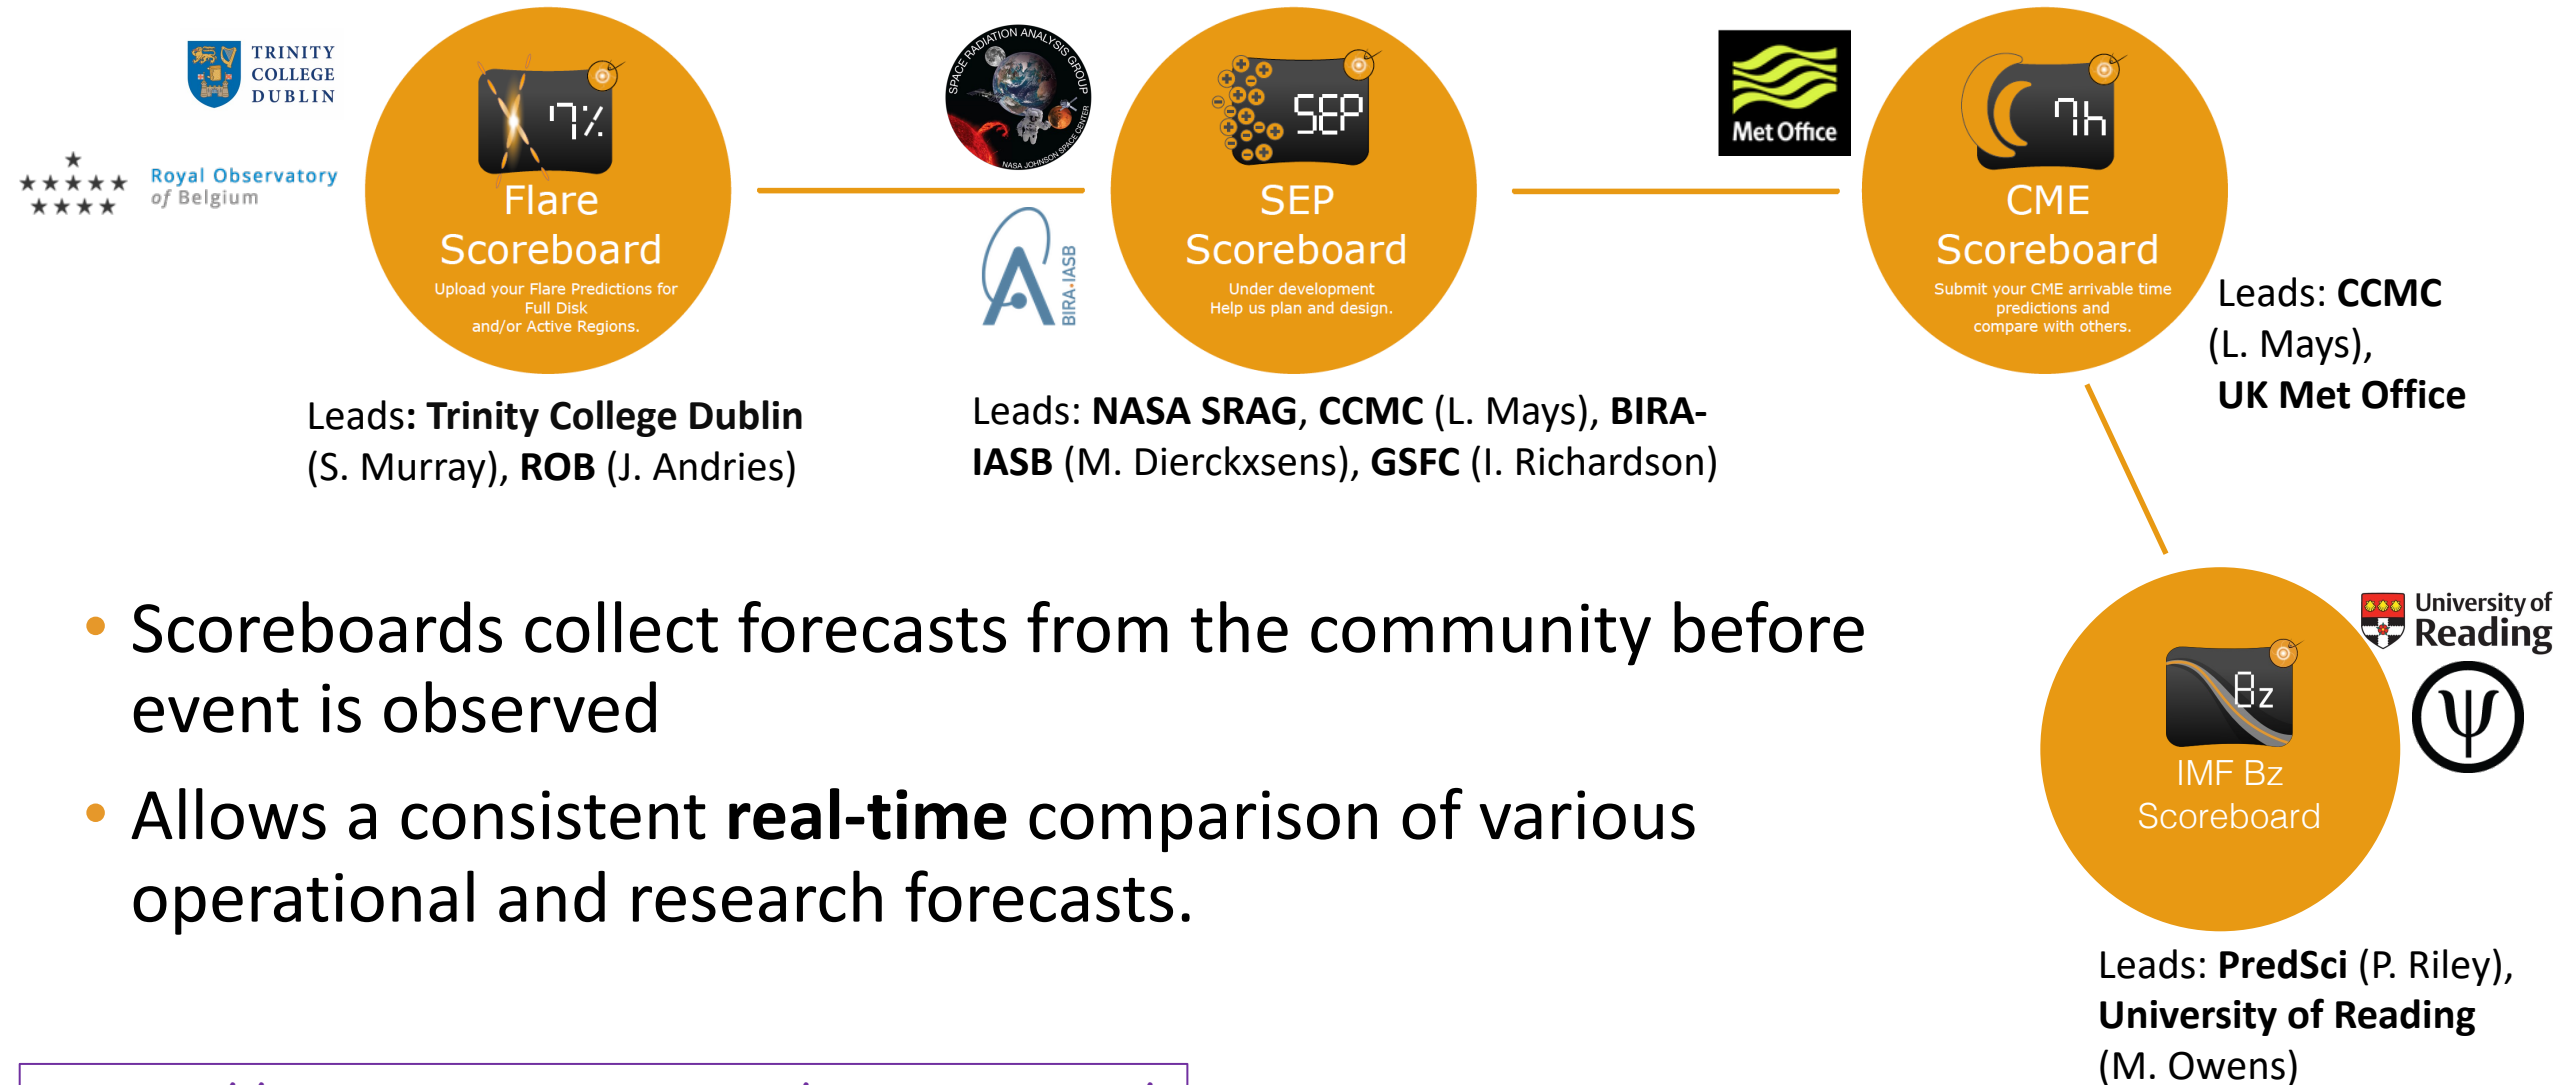

Continuous Integration and Deployment (CI/CD) System at CCMC:

CI/CD is a software development practice that enforces the automation of building, testing, and deployment of software.

Lead:
Chinwe
Didigu

Validation & R2O: CCMC community scoreboards

- Scoreboards collect forecasts from the community before event is observed
- Allows a consistent **real-time** comparison of various operational and research forecasts.

SEP Scoreboard

<https://ccmc.gsfc.nasa.gov/challenges/sep.php>

- Planning for the SEP Scoreboard started in 2016 - led by Mark Dierckxsens, Ian Richardson, Mike Marsh, and Leila Mays

- Builds upon the flare scoreboard and CME arrival time scoreboard
- Automated system: CCMC runs the models or model developers can routinely upload their predictions to an anonymous ftp.
- Forecast data is parsed and stored in a database which is accessible to anyone via an API

SEP Scoreboard: CCMC R2O Collaboration with NASA Johnson Space Center SRAG

- 2018: Beginning of ISEP project between CCMC and NASA Space Radiation Analysis Group (SRAG) to transition research Solar Energetic Particle models along the R2O pipeline.
- Project goals:
 - identify, transition, and evaluate new models (R2O)
 - develop software tailored for SRAG
 - implement these capabilities within CCMC as a prototype.
- CCMC has transitioned 6+ real-time models and built the SEP Scoreboard application
- The Scoreboard is already in use by SRAG for ISS support, and will be used for Artemis support by SRAG and M2M

<https://ccmc.gsfc.nasa.gov/scoreboards/sep/>

CCMC Staff focused on R2O/ISEP/ACE Proving Grounds/Real-time Runs

- **Masha Kuznetsova** (CCMC Director)
- **Leila Mays** (CCMC Deputy, CCMC ISEP project lead, CCMC Helio/SEP Scientist)
- **Joycelyn Jones** (Scoreboard Software Developer)
- **Chinwe Didigu** (Real-time Runs Software Developer, ACE, ISEP)
- **Aleksandre Taktakishvili** (CCMC Solar/Helio Scientist, ISEP)
- **Tina Tsui** (CCMC Cloud Infrastructure and Model Onboarding Lead)
- **Peter MacNeice** (CCMC Solar/Helio Scientist, ISEP connectivity models)
- **Chiu Wiegand** (CCMC Lead Software Developer, iSWA, DONKI)
- **Rick Mullinix** (CCMC Software Developer, iSWA, Flare Scoreboard)
- **Claudio Corti** (CCMC Helio/SEP Scientist)
- **Chris Light** (CCMC Helio/SEP Scientist)
- **Yihua Zheng** (CCMC Radiation/Inner Magnetosphere Scientist)
- **CCMC Sys Admin team** (Poly Manassis, Corey Bettenhausen, Sarabjit Bakshi, Kiran Patel)
- Consulting from **GSFC SMCE** Science Managed Cloud Environment staff

CCMC Collaborations with SRAG and M2M Staff for the ISEP project

SRAG (ISEP project)

- Eddie Semones (SRAG lead)
- Kerry Lee (SRAG operations lead)
- Janet Barzilla (ISEP project lead, Console operator)
- Steve Johnson (Console Operator, SEP models)
- Katie Whitman (Validation Lead)
- Tilaye Asfaw (MagPy lead)
- Phil Quinn (Console Operator, SEP models)
- Clayton Allison (SEP models)
- Ricky Egeland (Console Operator, SEP models)
- Michael Cook (Console Operator)

NASA Langley (ISEP project)

- Chris Mertens (Radiation models)

M2M (ISEP project)

- Yari Collado-Vega (M2M Director)
- Anna Chulaki (Deputy)
- Michelangelo Romano
- Mary Keenan
- Bob Loper
- Carina Alden
- Mary Aronne
- Mattie Anastopoulos
- Chris Stubenrauch
- Cloud Consultant

Model in ROR /onboarding

Continuous/RT Runs - SEP Scoreboard

More in Katie's talk in this session and her paper: Whitman et al. 2022 Adv Space Res - SEP models review paper recently submitted to COSPAR Roadmap special issue.

SEP Scoreboard Goals

- Uniform JSON input format and scoreboard displays so multiple models can be viewed and compared together
- Displays should be easy for space weather operators to understand and take action on, but contain all necessary information

SEP Forecast Types

For different energy ranges/thresholds models may forecast:

- Continuous timeseries of the probability of a threshold crossing
- Continuous intensity timeseries
- Peak intensity for event
- Peak intensity over the next x hours
- Threshold crossing

SEP Scoreboard Displays

Displays have been built for multiple forecast types:

Probability app:

- probability heat map and time series (MAG4, SWPC, ASPECS, GSU, SPRINTS)
<https://sep.ccmc.gsfc.nasa.gov/probability/>

Intensity app:

- intensity heat map (SEPSTER, UMASEP, SEPMOD, STAT, ASPECS, iPATH)
- intensity time series (REleASE, SEPMOD, UMASEP, STAT, ASPECS, iPATH)
<https://sep.ccmc.gsfc.nasa.gov/intensity/>

All Clear app:

- all clear forecast heat map (all models)
<https://sep.ccmc.gsfc.nasa.gov/allclear/>

SEP Scoreboard: Probability App

Shows the likelihood of an SEP Event within the next 24 hours with predictions from

- NOAA-SWPC's 3-Day Forecast
- the MAG4 family of models
- SAWS-ASPECS

Coming Soon:

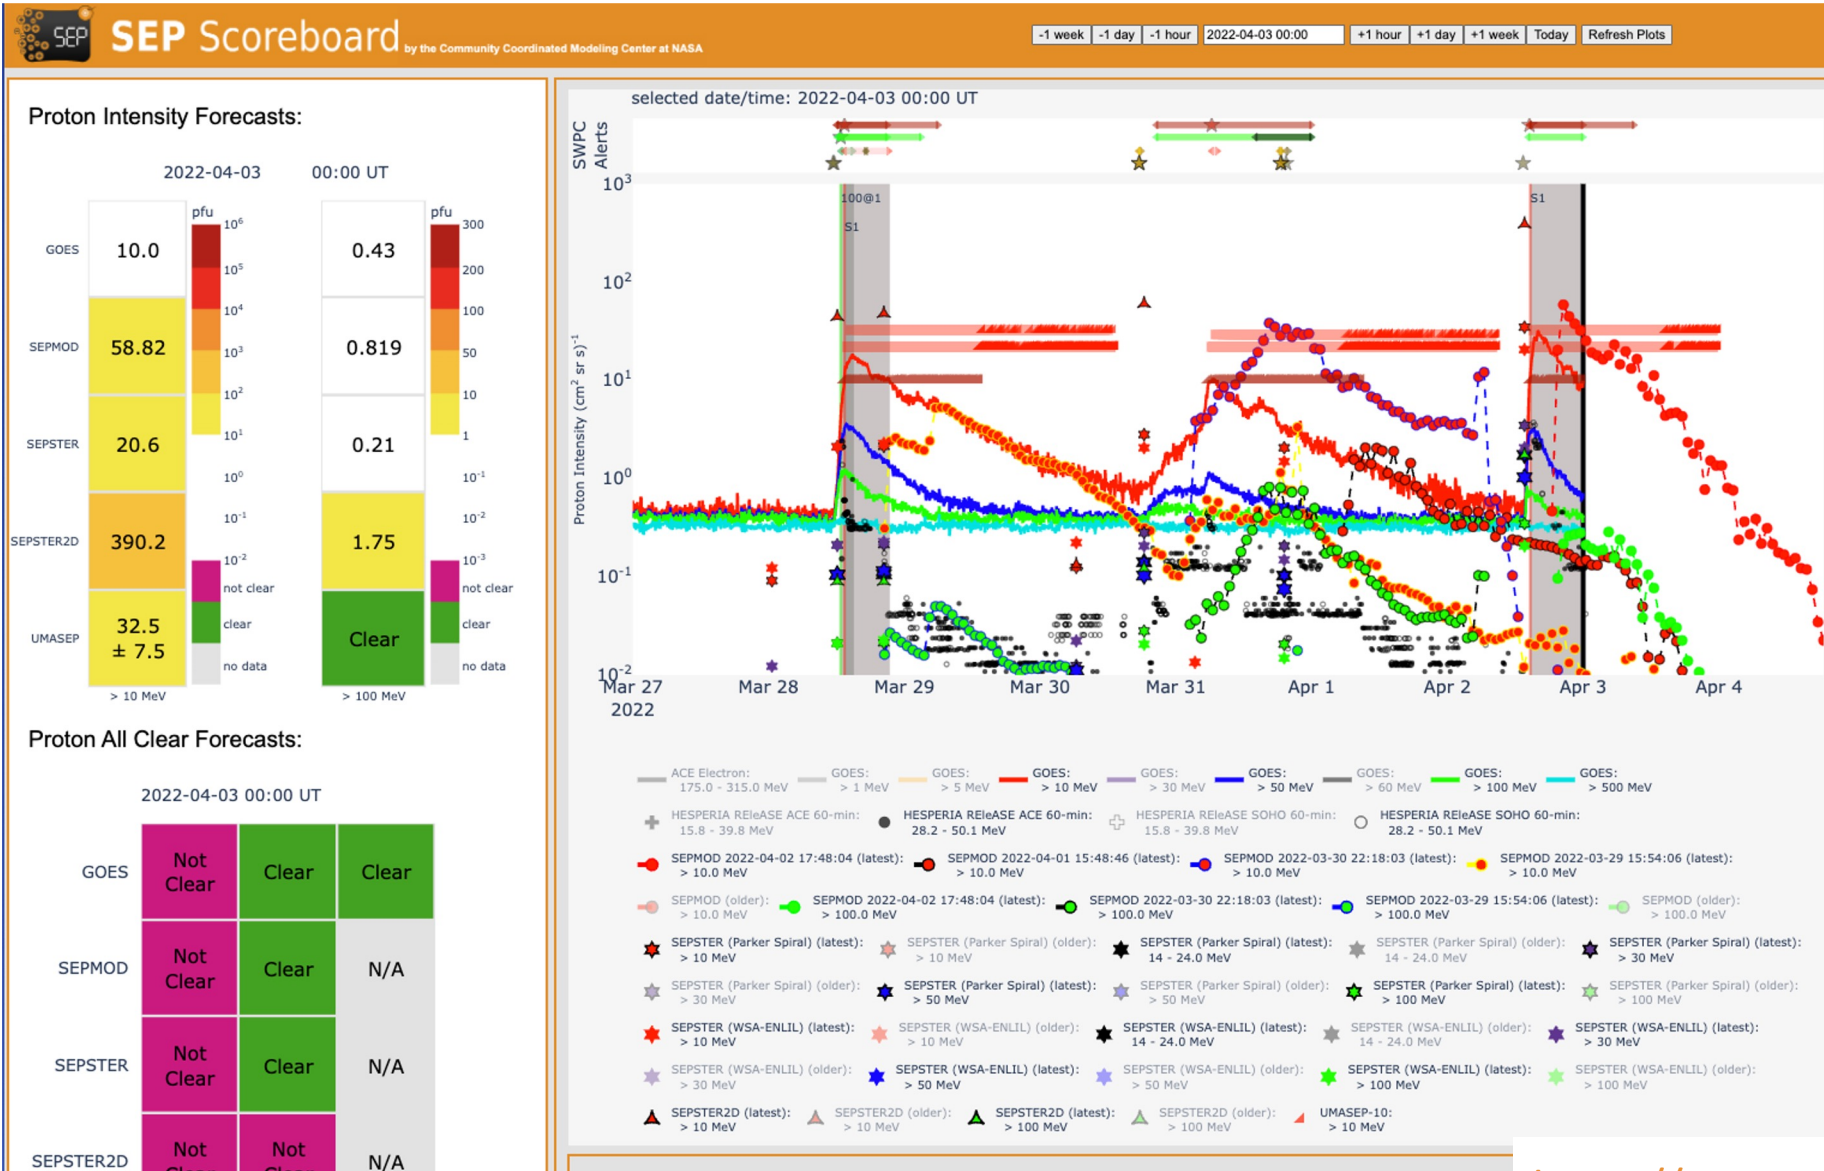

- NCAR/HAO MLSO/K-Coronagraph observations
- NextGen Federal Systems' SPRINTS Post-Eruptive forecasts

Features include:

- Real-Time automatic refreshing
- Simulated real-time display for past events
- User-configurable time series
- Listing of models available, with their last submission time, and indication if the data is out-of-date
- Links to more information about the models

<https://sep.ccmc.gsfc.nasa.gov/probability/>

SEP Scoreboard: Intensity App

Models shown include:

- SEPSTER
- HESPERIA ReleASE
- UMASEP
- STAT
- SEPSTER2D
- WSA-ENLIL+SEPMOD
- SAWS-ASPECS

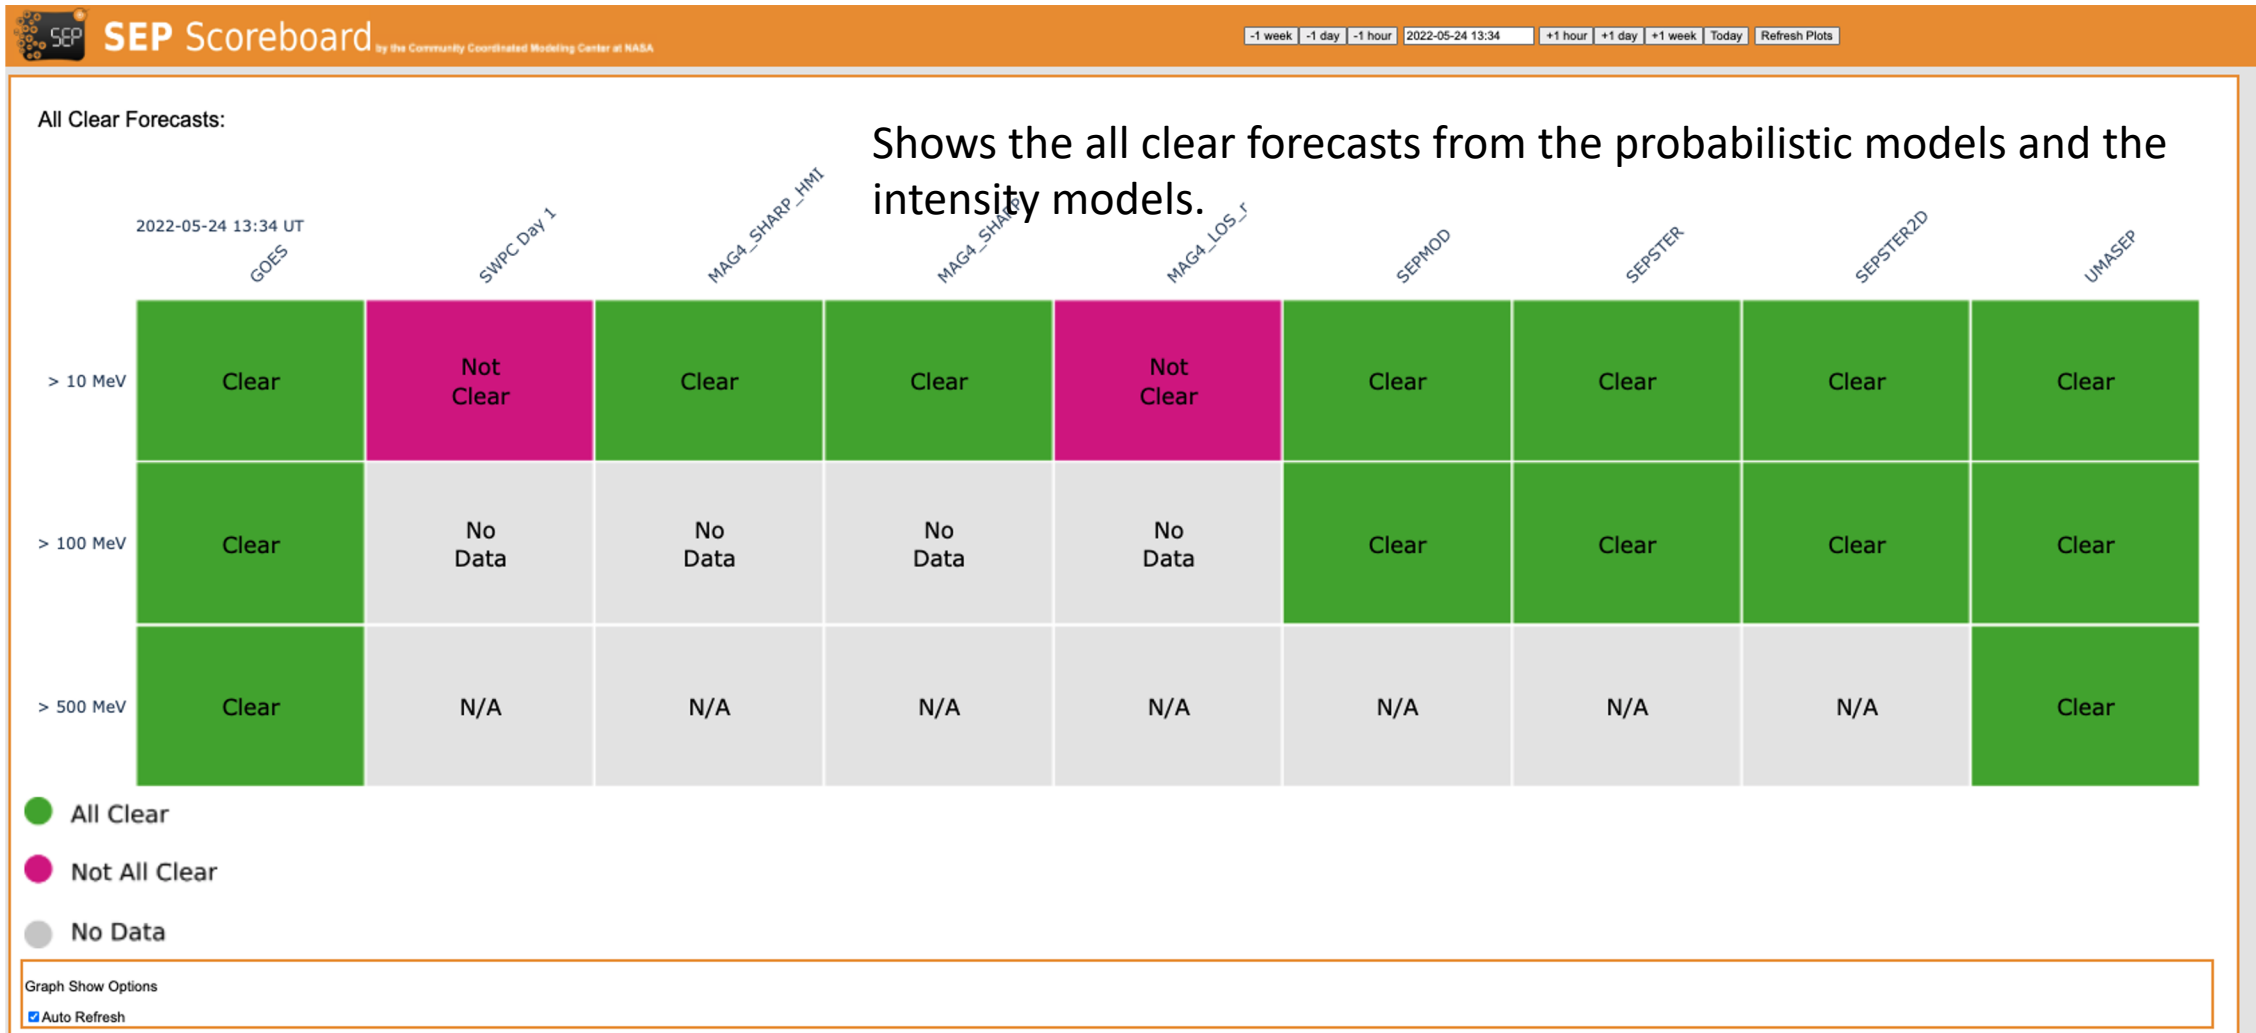

Coming Soon:

- NCAR/HAO MLSO/K-Coronagraph observations

Features include:

- Probability scoreboard features, plus
- Links to input data for some models' forecasts
- More user controls

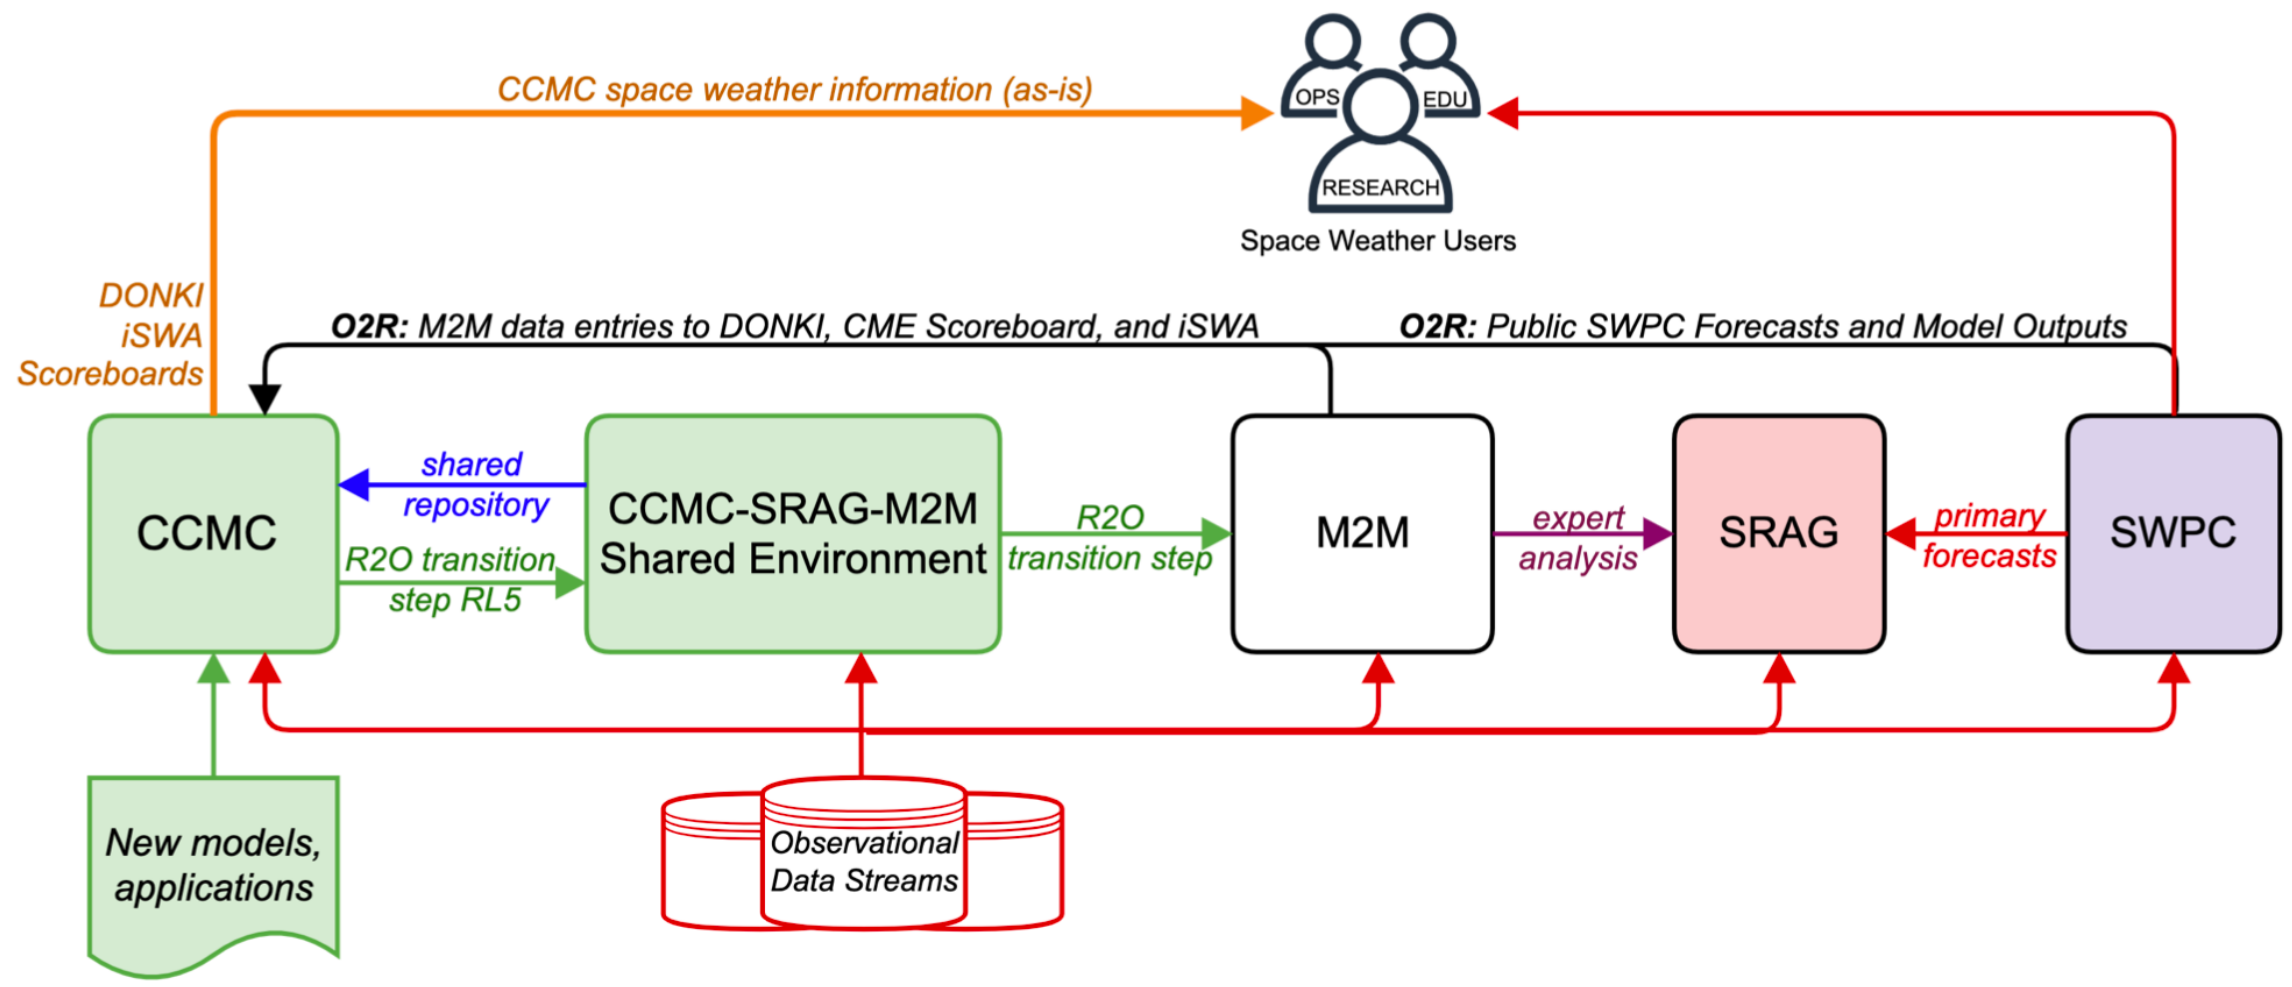

SEP Scoreboard: All Clear App

NASA in-house R2O2R Pipeline:

CCMC support of human exploration

Summary: SEP Scoreboard

<https://ccmc.gsfc.nasa.gov/scoreboards/sep/>

- Models are being added to the scoreboard as part of a project with NASA Space Radiation Analysis Group; all models are welcome.
- The Scoreboard displays are available publicly on the web
- **Everyone in the community is welcome to participate!**
 - Models that run in real-time: provide model outputs to the **scoreboard** via ftp
 - Models that run in historical mode/for science studies: provide results and participate in the **ISWAT SEP Validation Team** activities
