

How Can CCMC Better Support Ongoing National Space Weather Activities/National Space Weather Action Plan?

- CCMC sits in a unique place between Research and Operations:
 - Place where “operational” concepts in terms of model forecasting/nowcasting can be tried out and tested
- National Space Weather Action Plan Goal 5: Improve Space-Weather Services through Advancing Understanding and Forecasting
 - Natural place for present CCMC activities
- Goal 4: Improve Assessment, Modeling, and Prediction of Impacts on Critical Infrastructure
 - LWS and CCMC could lead effort to characterize “extreme” in terms of known events and other sources
 - CCMC could host models/data sources
